Grade 4 • Module 1

Place Value, Rounding, and Algorithms for Addition and Subtraction

OVERVIEW

In this 25-day Grade 4 module, students extend their work with whole numbers. They begin with large numbers using familiar units (hundreds and thousands) and develop their understanding of millions by building knowledge of the pattern of times ten in the base ten system on the place value chart (4.NBT.1). They recognize that each sequence of three digits is read as hundreds, tens, and ones followed by the naming of the corresponding base thousand unit (thousand, million, billion).

The place value chart is fundamental to Topic A. Building upon their previous knowledge of bundling, students learn that 10 hundreds can be composed into 1 thousand and, therefore, 30 hundreds can be composed into 3 thousands because a digit’s value is 10 times what it would be one place to its right (4.NBT.1). Students learn to recognize that in a number such as 7,777 each 7 has a value that is 10 times the value of its neighbor to the immediate right. One thousand can be decomposed into 10 hundreds, therefore 7 thousands can be decomposed into 70 hundreds.

Similarly, multiplying by 10 shifts digits one place to the left, and dividing by 10 shifts digits one place to the right.

\[ 3,000 = 10 \times 300 \quad 3,000 \div 10 = 300 \]

In Topic B, students use place value as a basis for comparing whole numbers. Although this is not a new concept, it becomes more complex as the numbers become larger. For example, it becomes clear that 34,156 is 3 thousands greater than 31,156.

\[ 34,156 > 31,156 \]

Comparison leads directly into rounding, where their skill with isolating units is applied and extended. Rounding to the nearest ten and hundred was mastered with three-digit numbers in Grade 3. Now, Grade 4 students moving into Topic C learn to round to any place value (4.NBT.3), initially using the vertical number line, though ultimately moving away from the visual model altogether. Topic C also includes word problems where students apply rounding to real life situations.

1 Grade 4 expectations in the NBT standards domain are limited to whole numbers less than or equal to 1,000,000.
In Grade 4, students become fluent with the standard algorithms for addition and subtraction. In Topics D and E, students focus on single like-unit calculations (ones with ones, thousands with thousands, etc.), at times requiring the composition of greater units when adding (10 hundreds are composed into 1 thousand) and decomposition into smaller units when subtracting (1 thousand is decomposed into 10 hundreds) (4.NBT.4). Throughout these topics, students apply their algorithmic knowledge to solve word problems. Students also use a variable to represent the unknown quantity.

The module culminates with multi-step word problems in Topic F (4.OA.3). Tape diagrams are used throughout the topic to model additive compare problems like the one exemplified below. These diagrams facilitate deeper comprehension and serve as a way to support the reasonableness of an answer.

A goat produces 5,212 gallons of milk a year.
A cow produces 17,279 gallons of milk a year.
How much more milk does a goat need to produce to make the same amount of milk as a cow?

17,279 – 5,212 = _______

A goat needs to produce _______ more gallons of milk a year.

The Mid-Module Assessment follows Topic C. The End-of-Module Assessment follows Topic F.
Focus Grade Level Standards

Use the four operations with whole numbers to solve problems.²

4.OA.3 Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Generalize place value understanding for multi-digit whole numbers. (Grade 4 expectations are limited to whole numbers less than or equal to 1,000,000.)

4.NBT.1 Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. For example, recognize that 700 ÷ 70 = 10 by applying concepts of place value and division.

² Only addition and subtraction multi-step word problems are addressed in this module. The balance of this cluster is addressed in Modules 3 and 7.
4.NBT.2 Read and write multi-digit whole numbers using base-ten numerals, number names, and expanded form. Compare two multi-digit numbers based on meanings of the digits in each place, using >, =, and < symbols to record the results of comparisons.

4.NBT.3 Use place value understanding to round multi-digit whole numbers to any place.

Use place value understanding and properties of operations to perform multi-digit arithmetic.³

4.NBT.4 Fluently add and subtract multi-digit whole numbers using the standard algorithm.

Foundational Standards

3.OA.8 Solve two-step word problems using the four operations. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.⁴

3.NBT.1 Use place value understanding to round whole numbers to the nearest 10 or 100.

3.NBT.2 Fluently add and subtract within 1000 using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction.

Focus Standards for Mathematical Practice

MP.1 Make sense of problems and persevere in solving them. Students use the place value chart to draw diagrams of the relationship between a digit’s value and what it would be one place to its right, for instance, by representing 3 thousands as 30 hundreds. Students also use the place value chart to compare large numbers.

MP.2 Reason abstractly and quantitatively. Students make sense of quantities and their relationships as they use both special strategies and the standard addition algorithm to add and subtract multi-digit numbers. Students decontextualize when they represent problems symbolically and contextualize when they consider the value of the units used and understand the meaning of the quantities as they compute.

MP.3 Construct viable arguments and critique the reasoning of others. Students construct arguments as they use the place value chart and model single- and multi-step problems. Students also use the standard algorithm as a general strategy to add and subtract multi-digit numbers when a special strategy is not suitable.

MP.5 Use appropriate tools strategically. Students decide on the appropriateness of using special strategies or the standard algorithm when adding and subtracting multi-digit numbers.

MP.6 Attend to precision. Students use the place value chart to represent digits and their values as they compose and decompose base ten units.

³ The balance of this cluster is addressed in Modules 3 and 7.
⁴ This standard is limited to problems with whole numbers and having whole-number answers; students should know how to perform operations in the conventional order when there are no parentheses to specify a particular order, i.e., the order of operations.

### Terminology

#### New or Recently Introduced Terms

- Ten thousands, hundred thousands (as places on the place value chart)
- Millions, ten millions, hundred millions (as places on the place value chart)
- Variable (letters that stand for numbers and can be added, subtracted, multiplied, and divided as numbers are)
Familiar Terms and Symbols

- =, <, > (equal to, less than, greater than)
- Addend (e.g., in 4 + 5, the numbers 4 and 5 are the addends)
- Algorithm (a step-by-step procedure to solve a particular type of problem)
- Bundling, making, renaming, changing, exchanging, regrouping, trading (e.g., exchanging 10 ones for 1 ten)
- Compose (e.g., to make 1 larger unit from 10 smaller units)
- Decompose (e.g., to break 1 larger unit into 10 smaller units)
- Difference (answer to a subtraction problem)
- Digit (any of the numbers 0 to 9; e.g., What is the value of the digit in the tens place?)
- Endpoint (used with rounding on the number line; the numbers that mark the beginning and end of a given interval)
- Equation (e.g., 2,389 + 80,601 = _____)
- Estimate (an approximation of a quantity or number)
- Expanded form (e.g., 100 + 30 + 5 = 135)
- Expression (e.g., 2 thousands × 10)
- Halfway (with reference to a number line, the midpoint between two numbers, e.g., 5 is halfway between 0 and 10)
- Number line (a line marked with numbers at evenly spaced intervals)
- Number sentence (e.g., 4 + 3 = 7)
- Place value (the numerical value that a digit has by virtue of its position in a number)
- Rounding (approximating the value of a given number)
- Standard form (a number written in the format 135)
- Sum (answer to an addition problem)
- Tape diagram (bar diagram)
- Unbundling, breaking, renaming, changing, regrouping, trading (e.g., exchanging 1 ten for 10 ones)
- Word form (e.g., one hundred thirty-five)

These are terms and symbols students have used or seen previously.
Suggested Tools and Representations

- Number lines (vertical to represent rounding up and rounding down)
- Personal white boards (one per student; see explanation on the following pages)
- Place value cards (one large set per classroom including 7 units to model place value)
- Place value chart (templates provided in lessons to insert into personal white boards)
- Place value disks (can be concrete manipulatives or pictorial drawings, such as the chip model, to represent numbers)
- Tape diagrams (drawn to model a word problem)

Suggested Methods of Instructional Delivery

Directions for Administration of Sprints

Sprints are designed to develop fluency. They should be fun, adrenaline-rich activities that intentionally build energy and excitement. A fast pace is essential. During Sprint administration, teachers assume the role of athletic coaches. A rousing routine fuels students’ motivation to do their personal best. Student recognition of increasing success is critical, and so every improvement is celebrated.

One Sprint has two parts with closely related problems on each. Students complete the two parts of the Sprint in quick succession with the goal of improving on the second part, even if only by one more.

With practice, the following routine takes about 9 minutes.
Module Overview

Module 1: Place Value, Rounding, and Algorithms for Addition and Subtraction

Date: 5/25/14

Sprint A

Pass Sprint A out quickly, face down on student desks with instructions to not look at the problems until the signal is given. (Some Sprints include words. If necessary, prior to starting the Sprint, quickly review the words so that reading difficulty does not slow students down.)

T: You will have 60 seconds to do as many problems as you can. I do not expect you to finish all of them. Just do as many as you can, your personal best. (If some students are likely to finish before time is up, assign a number to count by on the back.)

T: Take your mark! Get set! THINK!

Students immediately turn papers over and work furiously to finish as many problems as they can in 60 seconds. Time precisely.

T: Stop! Circle the last problem you did. I will read just the answers. If you got it right, call out “Yes!”

If you made a mistake, circle it. Ready?

T: (Energetically, rapid-fire call the first answer.)

S: Yes!

T: (Energetically, rapid-fire call the second answer.)

S: Yes!

Repeat to the end of Sprint A or until no student has a correct answer. If needed, read the count-by answers in the same way you read Sprint answers. Each number counted-by on the back is considered a correct answer.

T: Fantastic! Now, write the number you got correct at the top of your page. This is your personal goal for Sprint B.

T: How many of you got one right? (All hands should go up.)

T: Keep your hand up until I say the number that is one more than the number you got correct. So, if you got 14 correct, when I say 15, your hand goes down. Ready?

T: (Continue quickly.) How many got two correct? Three? Four? Five? (Continue until all hands are down.)

If the class needs more practice with Sprint A, continue with the optional routine presented below.

T: I’ll give you one minute to do more problems on this half of the Sprint. If you finish, stand behind your chair.

As students work, the student who scored highest on Sprint A might pass out Sprint B.

T: Stop! I will read just the answers. If you got it right, call out “Yes!” If you made a mistake, circle it. Ready? (Read the answers to the first half again as students stand.)

Movement

To keep the energy and fun going, always do a stretch or a movement game in between Sprints A and B. For example, the class might do jumping jacks while skip-counting by 5 for about 1 minute. Feeling invigorated, students take their seats for Sprint B, ready to make every effort to complete more problems this time.
Sprint B

Pass Sprint B out quickly, face down on student desks with instructions to not look at the problems until the signal is given. (Repeat the procedure for Sprint A up through the show of hands for how many right.)

T: Stand up if you got more correct on the second Sprint than on the first.

S: (Stand.)

T: Keep standing until I say the number that tells how many more you got right on Sprint B. If you got three more right on Sprint B than you did on Sprint A, when I say three, you sit down. Ready? (Call out numbers starting with one. Students sit as the number by which they improved is called. Celebrate the students who improved most with a cheer.)

T: Well done! Now, take a moment to go back and correct your mistakes. Think about what patterns you noticed in today’s Sprint.

T: How did the patterns help you get better at solving the problems?

T: Rally Robin your thinking with your partner for 1 minute. Go!

Rally Robin is a style of sharing in which partners trade information back and forth, one statement at a time per person, for about 1 minute. This is an especially valuable part of the routine for students who benefit from their friends’ support to identify patterns and try new strategies.

Students may take Sprints home.

RDW or Read, Draw, Write (an Equation and a Statement)

Mathematicians and teachers suggest a simple process applicable to all grades:

1) Read.
2) Draw and Label.
3) Write an equation.
4) Write a word sentence (statement).

The more students participate in reasoning through problems with a systematic approach, the more they internalize those behaviors and thought processes.

- What do I see?
- Can I draw something?
- What conclusions can I make from my drawing?
### Modeling with Interactive Questioning

The teacher models the whole process with interactive questioning, some choral response, and talk moves such as, “What did Monique say, everyone?” After completing the problem, students might reflect with a partner on the steps they used to solve the problem. “Students, think back on what we did to solve this problem. What did we do first?” Students might then be given the same or similar problem to solve for homework.

### Guided Practice

Each student has a copy of the question. Though guided by the teacher, they work independently at times and then come together again. Timing is important. Students might hear, “You have 2 minutes to do your drawing.” Or, “Put your pencils down. Time to work together again.” The Debrief might include selecting different student work to share.

### Independent Practice

The students are given a problem to solve and possibly a designated amount of time to solve it. The teacher circulates, supports, and is thinking about which student work to show to support the mathematical objectives of the lesson. When sharing student work, students are encouraged to think about the work with questions such as, “What do you see Jeremy did?” “What is the same about Jeremy’s work and Sara’s work?” “How did Jeremy show the 3/7 of the students?” “How did Sara show the 3/7 of the students?”

### Personal White Boards

#### Materials Needed for Personal White Boards

- 1 heavy duty clear sheet protector
- 1 piece of stiff red tag board 11" × 8 ½"
- 1 piece of stiff white tag board 11" × 8 ¼"
- 1 3" × 3" piece of dark synthetic cloth for an eraser (e.g., felt)
- 1 low odor blue dry erase marker, fine point

#### Directions for Creating Personal White Boards

Cut your white and red tag to specifications. Slide into the sheet protector. Store your eraser on the red side. Store markers in a separate container to avoid stretching the sheet protector.

#### Frequently Asked Questions About Personal White Boards

**Why is one side red and one white?**

The white side of the board is the “paper.” Students generally write on it, and if working individually, turn the board over to signal to the teacher they have completed their work. The teacher then says, “Show me your boards,” when most of the class is ready.

**What are some of the benefits of a personal white board?**

- The teacher can respond quickly to a gap in student understandings and skills. “Let’s do some of
these on our personal white boards until we have more mastery.”

- Students can erase quickly so that they do not have to suffer the evidence of their mistake.
- They are motivating. Students love both the drill and thrill capability and the chance to do story problems with an engaging medium.
- Checking work gives the teacher instant feedback about student understanding.

**What is the benefit of this personal white board over a commercially purchased dry erase board?**

- It is much less expensive.
- Templates such as place value charts, number bond mats, hundreds boards, and number lines can be stored between the two pieces of tag board for easy access and reuse.
- Worksheets, story problems, and other problem sets can be done without marking the paper so that students can work on the problems independently at another time.
- Strips with story problems, number lines, and arrays can be inserted and still have a full piece of paper on which to write.
- The red versus white side distinction clarifies your expectations. When working collaboratively, there is no need to use the red. When working independently, the students know how to keep their work private.
- The tag board can be removed so that student work can be projected on an overhead.

**Scaffolds**

The scaffolds integrated into *A Story of Units* give alternatives for how students access information as well as express and demonstrate their learning. Strategically placed margin notes are provided within each lesson elaborating on the use of specific scaffolds at applicable times. They address many needs presented by English language learners, students with disabilities, students performing above grade level, and students performing below grade level. Many of the suggestions are organized by Universal Design for Learning (UDL) principles and are applicable to more than one population. To read more about the approach to differentiated instruction in *A Story of Units*, please refer to “How to Implement *A Story of Units*.”

---

6 Students with disabilities may require Braille, large print, audio, or special digital files. Please visit the website www.p12.nysed.gov/specialed/aim for specific information on how to obtain student materials that satisfy the National Instructional Materials Accessibility Standard (NIMAS) format.

Topic A

Place Value of Multi-Digit Whole Numbers

4.NBT.1, 4.NBT.2, 4.OA.1

Focus Standard:

4.NBT.1 Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. For example, recognize that 700 ÷ 70 = 10 by applying concepts of place value and division.

4.NBT.2 Read and write multi-digit whole numbers using base-ten numerals, number names, and expanded form. Compare two multi-digit numbers based on meanings of the digits in each place, using >, =, and < symbols to record the results of comparisons.

Instructional Days: 4

Coherence -Links from: G3–M2 Place Value and Problem Solving with Units of Measure
-Links to: G5–M1 Place Value and Decimal Fractions

In Topic A, students build the place value chart to 1 million and learn the relationship between each place value as 10 times the value of the place to the right. Students manipulate numbers to see this relationship, such as 30 hundreds composed as 3 thousands. They decompose numbers to see that 7 thousands is the same as 70 hundreds. As students build the place value chart into thousands and up to 1 million, the sequence of three digits is emphasized. They become familiar with the base thousand unit names up to 1 billion. Students fluently write numbers in multiple formats: as digits, in unit form, as words, and in expanded form up to 1 million.

</tbody>
</table>
Lesson 1

Objective: Interpret a multiplication equation as a comparison.

Suggested Lesson Structure

- Fluency Practice: (13 minutes)
- Application Problem: (5 minutes)
- Concept Development: (35 minutes)
- Student Debrief: (7 minutes)
- Total Time: (60 minutes)

Fluency Practice (13 minutes)

- Sprint: Multiply and Divide by 10 4.NBT.1 (10 minutes)
- Place Value 4.NBT.2 (3 minutes)

Sprint: Multiply and Divide by 10 (10 minutes)

Materials: (S) Multiply and Divide by 10 Sprint

Note: Reviewing this fluency activity acclimates students to the Sprint routine, a vital component of the fluency program.

Place Value (3 minutes)

Materials: (S) Personal white board, unlabeled thousands place value chart (Template)

Note: Reviewing and practicing place value skills in isolation prepares students for success in multiplying different place value units during the lesson.

T: (Project place value chart to the thousands.) Show 4 ones as place value disks. Write the number below it.

S: (Draw 4 ones disks and write 4 below it.)

T: Show 4 ten disks and write the number below it.

S: (Draw 4 ten disks and write 4 at the bottom of the tens column.)

T: Say the number in unit form.

S: 4 tens 4 ones.

NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:

For the Place Value fluency activity, students may represent ones, etc., using counters rather than drawing. Others may benefit from the opportunity to practice simultaneously speaking and showing units (e.g., tens). Provide sentence frames to support oral response, such as “_____ tens _____ ones is _____ (standard form) _____.

Tens Thousands Hundreds Tens Ones 4,004
Interpret a multiplication equation as a comparison.

Date: 5/26/14

T: Say the number in standard form.
S: 44.

Continue for the following possible sequence: 2 tens 3 ones, 2 hundreds 3 ones, 2 thousands 3 hundreds, 2 thousands 3 tens, and 2 thousands 3 hundreds 5 tens and 4 ones.

Application Problem (5 minutes)

Ben has a rectangular area 9 meters long and 6 meters wide. He wants a fence that will go around it as well as grass sod to cover it. How many meters of fence will he need? How many square meters of grass sod will he need to cover the entire area?

Note: As the first lesson of the year, this Application Problem reviews area, perimeter, multiplication, and addition—all important concepts from Grade 3. This problem can be extended after the Concept Development by asking students to find an area 10 times as much as the grass sod or to find a perimeter 10 times as wide and 10 times as long.

Concept Development (35 minutes)

Materials: (T) Place value disks: ones, tens, hundreds, and thousands; unlabeled thousands place value chart (Template) (S) Personal white board, unlabeled thousands place value chart (Template)

Problem 1: 1 ten is 10 times as much as 1 one.

T: (Have a place value chart ready. Draw or place 1 unit into the ones place.)
T: How many units do I have?
S: 1.
T: What is the name of this unit?
S: A one.
T: Count the ones with me. (Draw ones as they do so.)
S: 1 one, 2 ones, 3 ones, 4 ones, 5 ones...10 ones.
Lesson 1: Interpret a multiplication equation as a comparison.

Problem 2: One hundred is 10 times as much as 1 ten.

Quickly repeat the process from Problem 1 with 10 copies of 1 ten.

Problem 3: One thousand is 10 times as much as 1 hundred.

Quickly repeat the process from Problem 1 with 10 copies of 1 hundred.

T: Discuss the patterns you have noticed with your partner.

S: 10 ones make 1 ten. 10 tens make 1 hundred. 10 hundreds make 1 thousand.

→ Every time we get 10 we bundle and make a bigger unit.

→ We copy a unit 10 times to make the next larger unit.

→ If we take any of the place value units, the next unit on the left is ten times as many.

T: Let's review, in words, the multiplication pattern that matches our models and 10 times as many.

Display the following information for student reference:

1 ten = 10 \times 1\text{ one} \quad \text{(Say, “1 ten is 10 times as much as 1 one.”)}

1 hundred = 10 \times 1\text{ ten} \quad \text{(Say, “1 hundred is 10 times as much as 1 ten.”)}

1 thousand = 10 \times 1\text{ hundred} \quad \text{(Say, “1 thousand is 10 times as much as 1 hundred.”)}

Problem 4: Model 10 times as much as on the place value chart with an accompanying equation.

Note: Place value disks are used as models throughout the curriculum and can be represented in two different ways. A disk with a value labeled inside of it, such as in Problem 1, should be drawn or placed on a place value chart with no headings. The value of the disk in its appropriate column indicates the column heading. A place value disk drawn as a dot should be used on place value charts with headings, as in Problem 4. This type of representation is called the chip model. The chip model is a faster way to represent place value disks and is used as students move away from a concrete stage of learning.

(Model 2 tens is 10 times as much as 2 ones on the place value chart and as an equation.)

T: Draw place value disks as dots. Because you are using dots, label your columns with the unit value.

T: Represent 2 ones. Solve to find 10 times as many as 2 ones. Work together.
Lesson 1: Interpret a multiplication equation as a comparison.

Date: 5/26/14

S: (Work together.)
T: 10 times as many as 2 ones is?
S: 20 ones → 2 tens.
T: Explain this equation to your partner using your model.
S: 10 × 2 ones = 20 ones = 2 tens

Repeat the process with 10 times as many as 4 tens is 4 hundreds and 10 times as many as 7 hundreds is 70 hundreds is 7 thousands.

\[10 \times 4 \text{ tens} = 40 \text{ tens} = 4 \text{ hundreds}\]
\[10 \times 7 \text{ hundreds} = 70 \text{ hundreds} = 7 \text{ thousands}\]

**Problem 5: Model as an equation 10 times as much as 9 hundreds is 9 thousands.**

T: Write an equation to find the value of 10 times as many as 9 hundreds. (Circulate and assist students as necessary.)
T: Show me your boards. Read your equation.
S: \[10 \times 9 \text{ hundreds} = 90 \text{ hundreds} = 9 \text{ thousands}\.
T: Yes. Discuss whether this is true with your partner. (Write \[10 \times 9 \text{ hundreds} = 9 \text{ thousands}\.)
S: Yes it is true because 90 hundreds equals 9 thousands, so this equation just eliminates that extra step. \[→\] Yes, we know 10 of a smaller unit equals 1 of the next larger unit, so we just avoided writing that step.

**Problem Set (10 minutes)**

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. Some problems do not specify a method for solving. This is an intentional reduction of scaffolding that invokes MP.5, Use Appropriate Tools Strategically. Students should solve these problems using the RDW approach used for Application Problems.

For some classes, it may be appropriate to modify the assignment by specifying which problems students should work on first. With this option, let the purposeful sequencing of the Problem Set guide your selections so that problems continue to be scaffolded. Balance word problems with other problem types to ensure a range of practice. Consider assigning incomplete problems for homework or at another time during the day.

Challenge quick finishers to write their own 10 times as many statements similar to Problems 2 and 5.
Lesson Objective: Interpret a multiplication equation as a comparison.

Invite students to review their solutions for the Problem Set and the totality of the lesson experience. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set.

You may choose to use any combination of the questions below to lead the discussion.

- What relationship do you notice between the problem of Matthew’s stamps and Problems 1(a) and 1(b)?
- How did Problem 1(c) help you to solve Problem 4?
- In Problem 5 which solution proved most difficult to find? Why?
- How does the answer about Sarah’s age and her grandfather’s age relate to our lesson’s objective?
- What are some ways you could model 10 times as many? What are the benefits and drawbacks of each way of modeling? (Money, base ten materials, disks, labeled drawings of disks, dots on a labeled place value chart, tape diagram.)
- Take 2 minutes to explain to your partner what we learned about the value of each unit as it moves from right to left on the place value chart.
- Write and complete the following statements:

  _____ ten is _____ times as many as _____ one.
  _____ hundred is _____ times as many as _____ ten.
  _____ thousand is _____ times as many as _____ hundred.

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
### Lesson 1 Sprint

**Lesson 1:** Interpret a multiplication equation as a comparison.

**Date:** 5/26/14

This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 3.0 Unported License.
1. Label the place value charts. Fill in the blanks to make the following equations true. Draw disks in the place value chart to show how you got your answer using arrows to show any bundling.

   a. \(10 \times 3 \text{ ones} = \underline{\text{ones}} = \underline{\text{ones}}\)

   b. \(10 \times 2 \text{ tens} = \underline{\text{tens}} = \underline{\text{tens}}\)

   c. \(4 \text{ hundreds} \times 10 = \underline{\text{hundreds}} = \underline{\text{hundreds}}\)

2. Complete the following statements using your knowledge of place value:

   a. 10 times as many as 1 ten is _______ tens.

   b. 10 times as many as _______ tens is 30 tens or _______ hundreds.

   c. __________________________ as 9 hundreds is 9 thousands.

   d. _______ thousands is the same as 20 hundreds.

Use pictures, numbers, or words to explain how you got your answer for Part (d).
3. Matthew has 30 stamps in his collection. Matthew’s father has 10 times as many stamps as Matthew. How many stamps does Matthew’s father have? Use numbers or words to explain how you got your answer.

4. Jane saved $800. Her sister has 10 times as much money. How much money does Jane’s sister have? Use numbers or words to explain how you got your answer.

5. Fill in the blanks to make the statements true.
   a. 2 times as much as 4 is _______.
   b. 10 times as much as 4 is _______.
   c. 500 is 10 times as much as _______.
   d. 6,000 is ____________________________ as 600.

6. Sarah is 9 years old. Sarah’s grandfather is 90 years old. Sarah’s grandfather is how many times as old as Sarah?

   Sarah’s grandfather is _______ times as old as Sarah.
Lesson 1 Exit Ticket

Name __________________________ Date ________________

Use the disks in the place value chart below to complete the following problems.

1. Label the place value chart.

2. Tell about the movement of the disks in the place value chart by filling in the blanks to make the following equation match the drawing in the place value chart.

   ____________ × 10 = _______________ = ______________

3. Write a statement about this place value chart using the words “10 times as many.”
Lesson 1 Homework

Name ___________________________________________ Date __________________

1. Label the place value charts. Fill in the blanks to make the following equations true. Draw disks in the place value chart to show how you got your answer, using arrows to show any regrouping.

   a. 10 × 4 ones = ______ ones = ______

   b. 10 × 2 tens = ______ tens = ______

   c. 5 hundreds × 10 = ______ hundreds = ______

2. Complete the following statements using your knowledge of place value:

   a. 10 times as many as 1 hundred is ______ hundreds or ______ thousand.

   b. 10 times as many as ______ hundreds is 60 hundreds or ______ thousands.

   c. ____________________________ as 8 hundreds is 8 thousands.

   d. ________ hundreds is the same as 4 thousands.

Use pictures, numbers, or words to explain how you got your answer for Part (d).
3. Katrina has 60 GB of storage on her tablet. Katrina’s father has 10 times as much storage on his computer. How much storage does Katrina’s father have? Use numbers or words to explain how you got your answer.

4. Katrina saved $200 to purchase her tablet. Her father spent 10 times as much money to buy his new computer. How much did her father’s computer cost? Use numbers or words to explain how you got your answer.

5. Fill in the blanks to make the statements true.
   a. 4 times as much as 3 is _______.
   b. 10 times as much as 9 is _______.
   c. 700 is 10 times as much as _______.
   d. 8,000 is ___________________________ as 800.

6. Tomas’s grandfather is 100 years old. Tomas’s grandfather is 10 times as old as Tomas. How old is Tomas?
Lesson 1: Interpret a multiplication equation as a comparison.

Date: 5/26/14
Lesson 2

Objective: Recognize a digit represents 10 times the value of what it represents in the place to its right.

Suggested Lesson Structure

- Fluency Practice (12 minutes)
- Application Problem (6 minutes)
- Concept Development (33 minutes)
- Student Debrief (9 minutes)
- Total Time (60 minutes)

Fluency Practice (12 minutes)

- Skip-Counting 3.OA.7 (4 minutes)
- Place Value 4.NBT.2 (4 minutes)
- Multiply by 10 4.NBT.1 (4 minutes)

Skip-Counting (4 minutes)

Note: Practicing skip-counting on the number line builds a foundation for accessing higher order concepts throughout the year.

Direct students to count by threes forward and backward to 36, focusing on the crossing-ten transitions.

Example: (3, 6, 9, 12, 9, 12, 9, 12, 15, 18, 21, 18, 21, 24, 27, 30, 27, 30, 30, 33, 30, 33, 30, 33, 36...) The purpose of focusing on crossing the ten transitions is to help students make the connection that, for example, when adding 3 to 9, 9 + 1 is 10 and then 2 more is 12.

We see a similar purpose in counting down by threes; 12 – 2 is 10 and subtracting 1 more is 9. This work builds on the fluency work of previous grade levels. Students should understand that when crossing the ten, they are regrouping.

Direct students to count by fours forward and backward to 48, focusing on the crossing-ten transitions.

Place Value (4 minutes)

Materials: (5) Personal white board, unlabeled thousands place value chart (Lesson 1 Template)

Note: Reviewing and practicing place value skills in isolation prepares students for success in multiplying different place value units during the lesson.
T: (Project place value chart to the thousands place.) Show 5 tens as place value disks, and write the number below it.
S: (Draw 5 tens. Write 5 below the tens column and 0 below the ones column.)
T: (Draw to correct student misunderstanding.) Say the number in unit form.
S: 5 tens.
T: Say the number in standard form.
S: 50.

Continue for the following possible sequence: 3 tens 2 ones, 4 hundreds 3 ones, 1 thousand 2 hundreds, 4 thousands 2 tens, and 4 thousands 2 hundreds 3 tens 5 ones.

Multiply by 10 (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews concepts learned in Lesson 1.

T: (Project 10 ones × 10 = 1 ______.) Fill in the blank.
S: (Write 10 ones × 10 = 1 hundred.)
T: Say the multiplication sentence in standard form.
S: 10 × 10 = 100.

Repeat for the following possible sequence: 10 × _____ = 2 hundreds; 10 × _____ = 3 hundreds; 10 × _____ = 7 hundreds; 10 × 1 hundred = 1 ______; 10 × _____ = 2 thousands; 10 × _____ = 8 thousands; 10 × 10 thousands = _____.

Application Problem (6 minutes)

Amy is baking muffins. Each baking tray can hold 6 muffins.

a. If Amy bakes 4 trays of muffins, how many muffins will she have in all?

b. The corner bakery produced 10 times as many muffins as Amy baked. How many muffins did the bakery produce?

Extension: If the corner bakery packages the muffins in boxes of 100, how many boxes of 100 could they make?

Note: This Application Problem builds on the concept from the previous lesson of 10 times as many.
Concept Development (33 minutes)

Materials: (S) Personal white board, unlabeled millions place value chart (Template)

Problem 1: Multiply single units by 10 to build the place value chart to 1 million. Divide to reverse the process.

T: Label ones, tens, hundreds, and thousands on your place value chart.
T: On your personal white board, write the multiplication sentence that shows the relationship between 1 hundred and 1 thousand.
S: (Write: 10 \times 1 \text{ hundred} = 10 \text{ hundreds} = 1 \text{ thousand}.)
T: Draw place value disks on your place value chart to find the value of 10 times 1 thousand.
T: (Circulate.) I saw that Tessa drew 10 disks in the thousands column. What does that represent?
S: 10 times 1 thousand equals 10 thousands.
(10 \times 1 \text{ thousand} = 10 \text{ thousands}.)
T: How else can 10 thousands be represented?
S: 10 thousands can be bundled because, when you have 10 of one unit, you can bundle them and move the bundle to the next column.
T: (Point to the place value chart.) Can anyone think of what the name of our next column after the thousands might be? (Students share. Label the ten thousands column.)
T: Now write a complete multiplication sentence to show 10 times the value of 1 thousand. Show how you regroup.
S: (Write 10 \times 1 \text{ thousand} = 10 \text{ thousands} = 1 \text{ ten thousand}.)
T: On your place value chart, show what 10 times the value of 1 ten thousand equals. (Circulate and assist students as necessary.)
T: What is 10 times 1 ten thousand?
S: 10 ten thousands. \rightarrow 1 \text{ hundred thousand}.
T: That is our next larger unit. (Write 10 \times 1 \text{ ten thousand} = 10 \text{ ten thousands} = 1 \text{ hundred thousand}.)
T: To move another column to the left, what would be my next 10 times statement?
S: 10 times 1 hundred thousand.
T: Solve to find 10 times 1 hundred thousand. (Circulate and assist students as necessary.)

NOTES ON MULTIPLE MEANS OF REPRESENTATION:
Scaffold student understanding of the place value pattern by recording the following sentence frames:
- 10 \times 1 \text{ one} = 1 \text{ ten}
- 10 \times 1 \text{ ten} = 1 \text{ hundred}
- 10 \times 1 \text{ hundred} = 1 \text{ thousand}
- 10 \times 1 \text{ thousand} = 1 \text{ ten thousand}
- 10 \times 1 \text{ ten thousand} = 1 \text{ hundred thousand}

Students may benefit from speaking this pattern chorally. Deepen understanding with prepared visuals (perhaps using an interactive whiteboard).
Lesson 2

Recognize a digit represents 10 times the value of what it represents in the place to its right.

Date: 5/26/14

T: 10 hundred thousands can be bundled and represented as 1 million. Title your column and write the multiplication sentence.

S: (Write $10 \times 1$ hundred thousand = 10 hundred thousands = 1 million.)

After having built the place value chart by multiplying by ten, quickly review the process simply moving from right to left on the place value chart and then reversing and moving left to right. (e.g., 2 tens times 10 equals 2 hundreds; 2 hundreds times 10 equals 2 thousands; 2 thousands divided by 10 equals 2 hundreds; 2 hundreds divided by 10 equals 2 tens.)

Problem 2: Multiply multiple copies of one unit by 10.

T: Draw place value disks and write a multiplication sentence to show the value of 10 times 4 ten thousands.

T: 10 times 4 ten thousands is?

S: 40 ten thousands. → 4 hundred thousands.

T: (Write $10 \times 4$ ten thousands = 40 ten thousands = 4 hundred thousands.) Explain to your partner how you know this equation is true.

Repeat with $10 \times 3$ hundred thousands.

Problem 3: Divide multiple copies of one unit by 10.

T: (Write $2$ thousands ÷ 10.) What is the process for solving this division expression?

S: Use a place value chart. → Represent 2 thousands on a place value chart. Then change them for smaller units so we can divide.

T: What would our place value chart look like if we changed each thousand for 10 smaller units?

S: 20 hundreds. → 2 thousands can be changed to be 20 hundreds because 2 thousands and 20 hundreds are equal.

T: Solve for the answer.

S: 2 hundreds. → 2 thousands ÷ 10 is 2 hundreds because 2 thousands unbundled becomes 20 hundreds. → 20 hundreds divided by 10 is 2 hundreds. → 2 thousands ÷ 10 = 20 hundreds ÷ 10 = 2 hundreds.

Repeat with 3 hundred thousands ÷ 10.
Problem 4: Multiply and divide multiple copies of two different units by 10.

T: Draw place value disks to show 3 hundreds and 2 tens.

T: (Write $10 \times (3 \text{ hundreds } 2 \text{ tens})$.) Work in pairs to solve this expression. I wrote 3 hundreds 2 tens in parentheses to show it is one number. (Circulate as students work. Clarify that both hundreds and tens must be multiplied by 10.)

T: What is your product?
S: 3 thousands 2 hundreds.

T: (Write $10 \times (3 \text{ hundreds } 2 \text{ tens}) = 3 \text{ thousands } 2 \text{ hundreds}$.) How do we write this in standard form?
S: 3,200.

T: (Write $10 \times (3 \text{ hundreds } 2 \text{ tens}) = 3 \text{ thousands } 2 \text{ hundreds} = 3,200$.)

T: (Write $(4 \text{ ten thousands } 2 \text{ tens}) \div 10$.) In this expression we have two units. Explain how you will find your answer.

S: We can use the place value chart again and represent the unbundled units, then divide. (Represent in the place value chart and record the number sentence $(4 \text{ ten thousands } 2 \text{ tens}) \div 10 = 4 \text{ thousands } 2 \text{ ones} = 4,002$.)

T: Watch as I represent numbers in the place value chart to multiply or divide by ten instead of drawing disks.

Repeat with $10 \times (4 \text{ thousands } 5 \text{ hundreds})$ and $(7 \text{ hundreds } 9 \text{ tens}) \div 10$. 
**Problem Set (10 minutes)**

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

**Student Debrief (9 minutes)**

**Lesson Objective:** Recognize a digit represents 10 times the value of what it represents in the place to its right.

Invite students to review their solutions for the Problem Set and the totality of the lesson experience. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set.

You may choose to use any combination of the questions below to lead the discussion.

- How did we use patterns to predict the increasing units on the place value chart up to 1 million? Can you predict the unit that is 10 times 1 million? 100 times 1 million?
- What happens when you multiply a number by 10? 1 ten thousand is what times 10? 1 hundred thousand is what times 10?
- Gail said she noticed that when you multiply a number by 10, you shift the digits one place to the left and put a zero in the ones place. Is she correct?
- How can you use multiplication and division to describe the relationship between units on the place value chart? Use Problem 1(a) and (c) to help explain.
- Practice reading your answers in Problem 2 out loud. What similarities did you find in saying the numbers in unit form and standard form? Differences?
Lesson 2: Recognize a digit represents 10 times the value of what it represents in the place to its right.

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Lesson 2: Recognize a digit represents 10 times the value of what it represents in the place to its right.

Date: 5/26/14

1. As you did during the lesson, label and represent the product or quotient by drawing disks on the place value chart.

   a. \( 10 \times 2 \) thousands = _______ thousands = ______________________________

   b. \( 10 \times 3 \) ten thousands = _______ ten thousands = ______________________________

   c. \( 4 \) thousands \( \div 10 \) = _______ hundreds \( \div 10 \) = _____________________________
2. Solve for each expression by writing the solution in unit form and in standard form.

<table>
<thead>
<tr>
<th>Expression</th>
<th>Unit form</th>
<th>Standard Form</th>
</tr>
</thead>
<tbody>
<tr>
<td>10 × 6 tens</td>
<td></td>
<td></td>
</tr>
<tr>
<td>7 hundreds × 10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3 thousands ÷ 10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>6 ten thousands ÷ 10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>10 × 4 thousands</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. Solve for each expression by writing the solution in unit form and in standard form.

<table>
<thead>
<tr>
<th>Expression</th>
<th>Unit form</th>
<th>Standard Form</th>
</tr>
</thead>
<tbody>
<tr>
<td>(4 tens 3 ones) × 10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(2 hundreds 3 tens) × 10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(7 thousands 8 hundreds) × 10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(6 thousands 4 tens) ÷ 10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(4 ten thousands 3 tens) ÷ 10</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4. Explain how you solved 10 × 4 thousands. Use a place value chart to support your explanation.
5. Explain how you solved (4 ten thousands 3 tens) ÷ 10. Use a place value chart to support your explanation.

6. Jacob saved 2 thousand dollar bills, 4 hundred dollar bills, and 6 ten dollar bills to buy a car. The car costs 10 times as much as he has saved. How much does the car cost?

7. Last year the apple orchard experienced a drought and didn’t produce many apples. But this year, the apple orchard produced 45 thousand Granny Smith apples and 9 hundred Red Delicious apples, which is 10 times as many apples as last year. How many apples did the orchard produce last year?

8. Planet Ruba has a population of 1 million aliens. Planet Zamba has 1 hundred thousand aliens.
   a. How many more aliens does Planet Ruba have than Planet Zamba?
   
   b. Write a sentence to compare the populations for each planet using the words 10 times as many.
Lesson 2 Exit Ticket

1. Fill in the blank to make a true number sentence. Use standard form.
   
   a. \((4 \text{ ten thousands 6 hundreds}) \times 10 = \) _________________
   
   b. \((8 \text{ thousands 2 tens}) \div 10 = \) _________________

2. The Carson family saved up $39,580 for a new home. The cost of their dream home is 10 times as much as they have saved. How much does their dream home cost?
1. As you did during the lesson, label and represent the product or quotient by drawing disks on the place value chart.
   a. $10 \times 4$ thousands = ________ thousands = ______________________________

   
   
   
   
   

   b. $4$ thousands $\div 10$ = ________ hundreds $\div 10$ = _____________________________

   
   
   
   
   

2. Solve for each expression by writing the solution in unit form and in standard form.

<table>
<thead>
<tr>
<th>Expression</th>
<th>Unit Form</th>
<th>Standard Form</th>
</tr>
</thead>
<tbody>
<tr>
<td>$10 \times 3$ tens</td>
<td></td>
<td></td>
</tr>
<tr>
<td>$5$ hundreds $\times 10$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>$9$ ten thousands $\div 10$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>$10 \times 7$ thousands</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
3. Solve for each expression by writing the solution in unit form and in standard form.

<table>
<thead>
<tr>
<th>Expression</th>
<th>Unit Form</th>
<th>Standard Form</th>
</tr>
</thead>
<tbody>
<tr>
<td>(2 tens 1 one) × 10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(5 hundreds 5 tens) × 10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(2 thousands 7 tens) ÷ 10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(4 ten thousands 8 hundreds) ÷ 10</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4.

a. Emily collected $950 selling Girl Scout cookies all day Saturday. Emily’s troop collected 10 times as much as she did. How much money did Emily’s troop raise?

b. On Saturday, Emily made 10 times as much as on Monday. How much money did Emily collect on Monday?
Lesson 2: Recognize a digit represents 10 times the value of what it represents in the place to its right.

Date: 5/26/14

unlabeled millions place value chart
Lesson 3

Objective: Name numbers within 1 million by building understanding of the place value chart and placement of commas for naming base thousand units.

Suggested Lesson Structure

<table>
<thead>
<tr>
<th>Activity</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fluency Practice</td>
<td>15 min</td>
</tr>
<tr>
<td>Application Problem</td>
<td>6 min</td>
</tr>
<tr>
<td>Concept Development</td>
<td>32 min</td>
</tr>
<tr>
<td>Student Debrief</td>
<td>7 min</td>
</tr>
<tr>
<td>Total Time</td>
<td>60 min</td>
</tr>
</tbody>
</table>

Fluency Practice (15 minutes)

- Sprint: Multiply by 3 3.OA.7 (10 minutes)
- Place Value and Value 4.NBT.2 (3 minutes)
- Base Ten Units 4.NBT.1 (2 minutes)

Sprint: Multiply by 3 (10 minutes)

Materials: (S) Multiply by 3 Sprint

Note: This fluency activity reviews a foundational third grade standard that helps students learn standard 4.NBT.5.

Place Value and Value (3 minutes)

Materials: (T) Unlabeled millions place value chart (Lesson 2 Template)

Note: Reviewing and practicing place value skills in isolation prepares students for success in multiplying different place value units during the lesson.

T: (Project the number 1,468,357 on a place value chart. Underline the 5.) Say the digit.
S: 5.
T: Say the place value of the 5.
S: Tens.
T: Say the value of 5 tens.

A NOTE ON STANDARDS ALIGNMENT:

In this lesson, students extend past 1 million (4.NBT standards limit to whole numbers less than or equal to 1 million) to establish a pattern of ones, tens, and hundreds within each base ten unit (thousands, millions, billions, trillions). Calculations in following lessons are limited to less than or equal to 1 million. If students are not ready for this step, omit establishing the pattern and internalize the units of the thousands period.
S: 50.
Repeat process, underlining 8, 4, 1, and 6.

**Base Ten Units (2 minutes)**

Note: This fluency activity bolsters students’ place value proficiency while reviewing multiplication concepts learned in Lessons 1 and 2.

T: (Project 2 tens =____.) Say the number in standard form.
S: 2 tens = 20.
Repeat for possible sequence: 3 tens, 9 tens, 10 tens, 11 tens, 12 tens, 19 tens, 20 tens, 30 tens, 40 tens, 80 tens, 84 tens, and 65 tens.

**Application Problem (6 minutes)**

The school library has 10,600 books.
The town library has 10 times as many books.
How many books does the town library have?
Note: This Application Problem builds on the concept from the previous lesson of determining 10 times as much as a number.

**Concept Development (32 minutes)**

Materials: (S) Personal white board, unlabeled millions place value chart (Lesson 2 Template)

Note: Students will go beyond the 4.NBT standard of using numbers less than or equal to 1 million to establish a pattern within the base ten units.

Introduction: Patterns of the base ten system.

T: In the last lesson, we extended the place value chart to 1 million. Take a minute to label the place value headings on your place value chart. (Circulate and check all headings.)

T: Excellent. Now talk with your partner about similarities and differences you see in those heading names.

S: I notice some words repeat, like ten, hundred, and thousand, but ones appears once. → I notice the thousand unit repeats 3 times—thousands, ten thousands, hundred thousands.
Lesson 3: Name numbers within 1 million by building understanding of the place value chart and placement of commas for naming base thousand units.

© 2014 Common Core, Inc. Some rights reserved. commoncore.org

This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 3.0 Unported License.
Problem 2: Add to make 10 of a unit and bundling up to 1 million.

T: What would happen if we combined 2 groups of 5 hundreds? With your partner, draw place value disks to solve. Use the largest unit possible to express your answer.

S: 2 groups of 5 hundreds equals 10 hundreds. → It would make 10 hundreds which can be bundled to make 1 thousand.

T: Now, solve for 5 thousands plus 5 thousands. Bundle in order to express your answer using the largest unit possible.

S: 5 thousands plus 5 thousands equals 10 thousands. We can bundle 10 thousands to make 1 ten thousand.

T: Solve for 4 ten thousands plus 6 ten thousands. Express your answer using the largest unit possible.

S: 4 ten thousands plus 6 ten thousands equals 10 ten thousands. We can bundle 10 ten thousands to make 1 hundred thousand.

Continue renaming problems, showing regrouping as necessary.

- 3 hundred thousands + 7 hundred thousands
- 23 thousands + 4 ten thousands
- 43 ten thousands + 11 thousands

Problem 3: 10 times as many with multiple units.

T: On your place value chart, model 5 hundreds and 3 tens with place value disks. What is 10 times 5 hundreds 3 tens?

S: (Show charts.) 5 thousands 3 hundreds.

T: Model 10 times 5 hundreds 3 tens with digits on the place value chart. Record your answer in standard form.

S: (Students show 10 times 5 hundreds is 5 thousands and 10 times 3 tens is 3 hundreds as digits.) 5,300.

T: Check your partner’s work and remind him/her of the comma’s role in this number.

T: (Write $10 \times 1$ ten thousand 5 thousands 3 hundreds 9 ones = ______.) With your partner, solve this problem and write your answer in standard form.

S: $10 \times 15,309 = 153,090$. 

MP.2
Lesson 3: Name numbers within 1 million by building understanding of the place value chart and placement of commas for naming base thousand units.

Date: 5/26/14

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (7 minutes)

Lesson Objective: Name numbers within 1 million by building understanding of the place value chart and placement of commas for naming base thousand units.

Invite students to review their solutions for the Problem Set and the totality of the lesson experience. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set.

You may choose to use any combination of the questions below to lead the discussion.

- In Problem 1, how did you know where to place commas within a number?
- Read aloud the numbers in Problem 1(d) and (e) with your partner. What role do the commas have as you read the numbers?
- How do place value understanding and the role of commas help you to read the value in the millions period that is represented by the number of millions, ten millions, and hundred millions?
- What did you discover as you solved Problem 3? How did 3(a) help you to solve 3(b)?
- How did you use the place value chart to help you compare unlike units in Problem 5?
- When might it be useful to omit commas? (Please refer to the UDL box for commas to guide your discussion.)

NOTES ON COMMAS:

Commas are optional for 4-digit numbers, as omitting them supports visualization of the total amount of each unit. For example, in the number 3247, 32 hundreds or 324 tens is easier to visualize when 3247 is written without a comma. In Grade 3, students understand 324 as 324 ones, 32 tens 4 ones, or 3 hundreds 2 tens 4 ones. This flexible thinking allows for seeing simplifying strategies (e.g., to solve 3247 – 623, rather than decompose 3 thousands, students might subtract 6 hundreds from 32 hundreds: 32 hundreds – 6 hundreds + 47 ones – 23 ones is 26 hundreds and 24 ones or 2624).
Exit Ticket  (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.

3. Represent each addend with place value disks in the place value chart. Show the composition of larger units from 10 smaller units. Write the sum in standard form.

   a. 2 thousands + 12 hundreds = ________________________________

   b. 14 ten thousands + 12 thousands = ____________________________
4. Use digits or disks on the place value chart to represent the following equations. Write the product in standard form.

   a. \(10 \times 5 \text{ thousands} = \) ________________

      How many thousands are in the answer? ________________

   b. \((4 \text{ ten thousands} 4 \text{ thousands}) \times 10 = \) ________________

      How many thousands are in the answer? ________________

   c. \((27 \text{ thousands} 3 \text{ hundreds} 5 \text{ ones}) \times 10 = \) ________________

      How many thousands are in your answer? ________________

5. A large grocery store received an order of 2 thousand apples. A neighboring school received an order of 20 boxes of apples with 100 apples in each. Use disks or disks on a place value chart to compare the number of apples received by the school and the number of apples received by the grocery store.
Lesson 4

Objective: Read and write multi-digit numbers using base ten numerals, number names, and expanded form.

Suggested Lesson Structure

- Fluency Practice (13 minutes)
- Application Problem (6 minutes)
- Concept Development (26 minutes)
- Student Debrief (15 minutes)
- Total Time (60 minutes)

Fluency Practice (13 minutes)

- Skip-Counting 3.OA.4–7 (3 minutes)
- Place Value 4.NBT.2 (2 minutes)
- NumbersExpressedinDifferentBaseUnits 4.NBT.1 (8 minutes)

Skip-Counting (3 minutes)

Note: Practicing skip-counting on the number line builds a foundation for accessing higher order concepts throughout the year.

Direct students to skip-count by fours forward and backward to 48 focusing on transitions crossing the ten.

Place Value (2 minutes)

Materials: (S) Personal white board, unlabeled millions place value chart (Lesson 2 Template)

Note: Reviewing and practicing place value skills in isolation prepares students for success in writing multi-digit numbers in expanded form.

T: Show 5 hundred thousands as place value disks and write the number below it on the place value chart.
S: (Draw 5 hundred thousands disks and write 500,000 below the chart.)

NOTES ON MULTIPLE MEANS OF REPRESENTATION:

Place value fluency supports language acquisition as it couples meaningful visuals with valuable practice speaking the standard and unit form of numbers to 1 million.
Lesson 4

NYS COMMON CORE MATHEMATICS CURRICULUM

Lesson 4: Read and write multi-digit numbers using base ten numerals, number names, and expanded form.

Date: 5/26/14

© 2014 Common Core, Inc. Some rights reserved. commoncore.org

This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 3.0 Unported License.

---

T: Say the number in unit form.
S: 5 hundred thousands.
T: Say it in standard form.
S: 500,000.

Continue for the following possible sequence: 5 hundred thousands 3 ten thousands, 5 hundred thousands 3 hundreds, 5 ten thousands 3 hundreds, 1 hundred thousand 3 hundreds 5 tens, and 4 hundred thousands 2 ten thousands 5 tens 3 ones.

Numbers Expressed in Different Base Units (8 minutes)

Materials: (S) Personal white board

Note: This fluency activity prepares students for success in writing multi-digit numbers in expanded form.

Base Hundred Units

T: (Project 3 hundreds = _____.) Say the number in standard form.
S: 300.

Continue with a suggested sequence of 9 hundreds, 10 hundreds, 19 hundreds, 21 hundreds, 33 hundreds, 30 hundreds, 100 hundreds, 200 hundreds, 500 hundreds, 530 hundreds, 537 hundreds, and 864 hundreds.

Base Thousand Units

T: (Project 5 thousands = _____.) Say the number in standard form.
S: 5,000.

Continue with a suggested sequence of 9 thousands, 10 thousands, 20 thousands, 100 thousands, 220 thousands, and 347 thousands.

Base Ten Thousand Units

T: (Project 7 ten thousands = _____.) Say the number in standard form.
S: 70,000.

Continue with a suggested sequence of 9 ten thousands, 10 ten thousands, 12 ten thousands, 19 ten thousands, 20 ten thousands, 30 ten thousands, 80 ten thousands, 81 ten thousands, 87 ten thousands, and 99 ten thousands.

Base Hundred Thousand Units

T: (Project 3 hundred thousands = _____.) Say the number in standard form.
S: 300,000.

Continue with a suggested sequence of 2 hundred thousands, 4 hundred thousands, 5 hundred thousands, 7 hundred thousands, 8 hundred thousands, and 10 hundred thousands.
Application Problem (6 minutes)

There are about forty-one thousand Asian elephants and about four hundred seventy thousand African elephants left in the world. About how many Asian and African elephants are left in total?

Note: This Application Problem builds on the content of the previous lesson, requiring students to name base thousand units. It also builds from 3.NBT.2 (fluently add and subtract within 1000). Assist students by asking them to add using unit names (similar to the example), not the entire numbers as digits.

Concept Development (26 minutes)

Materials: (S) Personal white board, unlabeled millions place value chart (Lesson 2 Template)

Problem 1: Write a four-digit number in expanded form.

T: On your place value chart write 1,708.
T: What is the value of the 1?
S: 1 thousand.
T: (Record 1,000 under the thousands column.) What is the value of the 7?
S: 7 hundred.
T: (Record 700 under the hundreds column.) What value does the zero have?
T: What is the value of the 8?
S: 8 ones.
T: (Record 8 under the ones column.) What is the value of 1,000 and 700 and 8?
S: 1,708.
T: So 1,708 is the same as 1,000 plus 700 plus 8.
T: Record that as a number sentence.
S: (Write 1,000 + 700 + 8 = 1,708.)
Problem 2: Write a five-digit number in word form and expanded form.

T: Now erase your values and write this number: 27,085.
T: Show the value of each digit at the bottom of your place value chart.
S: (Write 20,000, 7,000, 80, and 5.)
T: Why is there no term representing the hundreds?
S: Zero stands for nothing. \(\rightarrow\) Zero added to a number doesn’t change the value.
T: With your partner write an addition sentence to represent 27,085.
S: \(20,000 + 7,000 + 80 + 5 = 27,085\).
T: Now, read the number sentence with me.
S: Twenty thousand plus seven thousand plus eighty plus five equals twenty-seven thousand, eighty-five.
T: (Write the number as you speak.) You said “twenty-seven thousand, eighty-five.”
T: What do you notice about where I placed a comma in both the standard form and word form?
S: It is placed after 27 to separate the thousands in both the standard form and word form.

Problem 3: Transcribe a number in word form to standard and expanded form.

Display two hundred seventy thousand, eight hundred fifty.

T: Read this number. (Students read.) Tell your partner how you can match the word form to the standard form.
S: Everything you say, you should write in words. \(\rightarrow\)
The comma helps to separate the numbers in the thousands from the numbers in the hundreds, tens, and ones.
T: Write this number in your place value chart. Now, write this number in expanded form. Tell your partner the number sentence.
S: 200,000 plus 70,000 plus 800 plus 50 equals 270,850.

Repeat with sixty-four thousand, three.
Lesson 4: Convert a number in expanded form to word and standard form.

Display $700,000 + 8,000 + 500 + 70 + 3$.

T: Read this expression. (Students read.) Use digits to write this number in your place value chart.

T: My sum is 78,573. Compare your sum with mine.

S: Your 7 is in the wrong place. → The value of the 7 is 700,000. Your 7 has a value of 7,000.

T: Read this number in standard form with me.

S: Seven hundred eight thousand, five hundred seventy-three.

T: Write this number in words. Remember to check for correct use of commas and hyphens.

Repeat with $500,000 + 30,000 + 10 + 3$.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the alloted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (15 minutes)

Lesson Objective: Read and write multi-digit numbers using base ten numerals, number names, and expanded form.

Invite students to review their solutions for the Problem Set and the totality of the lesson experience. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set.

You may choose to use any combination of the questions below to lead the discussion.

- Compare the numbers in Problems 1 and 2. What do you notice?
- As you completed the chart on Page 2, what number words were tricky to write? Which number words can be confused with other number words? Why? What strategies did you use to spell number words?
Lesson 4:

- In Problem 4, Timothy and his dad read a number word in two ways. What other numbers can be read more than one way? Which way of reading a number best helps you solve? When?
- Two students discussed the importance of zero. Nate said that zero is not important while Jill said that zero is extremely important. Who is right? Why do you think so?
- What role can zero play in a number?
- How is expanded form related to the standard form of a number?
- When might you use expanded form to solve a calculation?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Lesson 4 Problem Set

Name ______________________________ Date ________________

1. a. On the place value chart below, label the units and represent the number 90,523.

b. Write the number in word form.

c. Write the number in expanded form.

2. a. On the place value chart below, label the units and represent the number 905,203.

b. Write the number in word form.

c. Write the number in expanded form.
3. Complete the following chart:

<table>
<thead>
<tr>
<th>Standard Form</th>
<th>Word Form</th>
<th>Expanded Form</th>
</tr>
</thead>
<tbody>
<tr>
<td>two thousand, four hundred eighty</td>
<td></td>
<td>20,000 + 400 + 80 + 2</td>
</tr>
<tr>
<td>sixty-four thousand, one hundred six</td>
<td></td>
<td></td>
</tr>
<tr>
<td>604,016</td>
<td></td>
<td></td>
</tr>
<tr>
<td>960,060</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4. Black Rhinos are endangered, with only 4,400 left in the world. Timothy read that number as “four thousand, four hundred.” His father read the number as “44 hundred.” Who read the number correctly? Use pictures, numbers, or words to explain your answer.
1. Use the place value chart below to complete the following:

<p>| | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

a. Label the units on the chart.

b. Write the number 800,000 + 6,000 + 300 + 2 in the place value chart.

c. Write the number in word form.

2. Write one hundred sixty thousand, five hundred eighty-two in expanded form.
Name ________________________________ Date __________________

1. a. On the place value chart below, label the units and represent the number 50,679.

   
   
   
   

   

   b. Write the number in word form.

   

   c. Write the number in expanded form.

2. a. On the place value chart below, label the units and represent the number 506,709.

   
   
   
   

   

   b. Write the number in word form.

   

   c. Write the number in expanded form.
3. Complete the following chart:

<table>
<thead>
<tr>
<th>Standard Form</th>
<th>Word Form</th>
<th>Expanded Form</th>
</tr>
</thead>
<tbody>
<tr>
<td>five thousand, three hundred seventy</td>
<td></td>
<td></td>
</tr>
<tr>
<td>thirty-nine thousand, seven hundred one</td>
<td></td>
<td></td>
</tr>
<tr>
<td>309,017</td>
<td></td>
<td></td>
</tr>
<tr>
<td>770,070</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4. Use pictures, numbers, and words to explain another way to say sixty-five hundred.
Topic B

Comparing Multi-Digit Whole Numbers

4.NBT.2

Focus Standard: 4.NBT.2

Instructional Days: 2

Coherence -Links from: G2–M3 Place Value, Counting, and Comparison of Numbers to 1,000

-Links to: G5–M1 Place Value and Decimal Fractions

In Topic B, students use place value to compare whole numbers. Initially using the place value chart, students compare the value of each digit to surmise which number is of greater value. Moving away from dependency on models and towards fluency with numbers, students compare numbers by observing across the entire number and noticing value differences. For example, in comparing 12,566 to 19,534, it is evident 19 thousand is greater than 12 thousands because of the value of the digits in the thousands unit. Additionally, students continue with number fluency by finding what is 1, 10, or 100 thousand more or less than a given number.

A Teaching Sequence Towards Mastery of Comparing Multi-Digit Whole Numbers

Objective 1: Compare numbers based on meanings of the digits using >, <, or = to record the comparison. (Lesson 5)

Objective 2: Find 1, 10, and 100 thousand more and less than a given number. (Lesson 6)
Lesson 5

Objective: Compare numbers based on meanings of the digits using >, <, or = to record the comparison.

Suggested Lesson Structure

- Fluency Practice (14 minutes)
- Application Problem (6 minutes)
- Concept Development (30 minutes)
- Student Debrief (10 minutes)
- Total Time (60 minutes)

Fluency Practice (14 minutes)

- Sprint: Multiply by 4 3.OA.7 (10 minutes)
- Unit Skip-Counting 4.NBT.1 (2 minutes)
- Place Value 4.NBT.2 (2 minutes)

Sprint: Multiply by 4 (10 minutes)

Materials: (S) Multiply by 4 Sprint

Note: This fluency reviews a foundational Grade 3 standard that helps students learn standard 4.NBT.5.

Unit Skip-Counting (2 minutes)

Note: This activity applies skip-counting fluency that was built during the first four lessons and applies to concepts from the multiplying by ten lessons.

T: Count by twos to 20.
S: 2, 4, 6, 8, 10, 12, 14, 16, 18, 20.
T: Now count by 2 tens to 20 tens. Stop counting and raise your hand when you see me raise my hand.
S: 2 tens, 4 tens, 6 tens.
T/S: (Raise hand.)
T: Say the number in standard form.
S: 60.

Continue, stopping the students at 12 tens, 16 tens, and 20 tens.
Repeat the process. This time, count by threes to 30 and by 3 ten thousands to 30 ten thousands.

**Place Value (2 minutes)**

Note: Reviewing and practicing place value skills in isolation prepares students for success in comparing numbers during the lesson.

- T: (Write 3,487.) Say the number.
  - S: 3,487.
- T: What digit is in the tens place?
  - S: 8.
- T: (Underline 8.) What’s the value of the 8?
  - S: 80.
- T: State the value of the 3.
  - S: 3,000.
- T: 4?
  - S: 400.

Repeat for the following possible sequence: 59,607; 287,493; and 742,952.

**Application Problem (6 minutes)**

Draw and label the units on the place value chart to hundred thousands. Use each of the following digits (9, 8, 7, 3, 1, 0) once to create a number that is between 7 hundred thousands and 9 hundred thousands. In word form, write the number you created.

Extension: Create 2 more numbers following the same directions as above.

Note: This Application Problem builds on the content of the previous lesson, requiring students to read and write multi-digit numbers in expanded, word, and unit forms.

**Concept Development (30 minutes)**

Materials: (S) Personal white board, unlabeled hundred thousands place value chart (Template)

**Problem 1: Comparing two numbers with the same largest unit.**

Display: 3,010  2,040

- T: Let’s compare two numbers. Say the standard form to your partner and model each number on your place value chart.
Lesson 5: Compare numbers based on meanings of the digits using >, <, or = to record the comparison.

Date: 8/19/14

S: Three thousand, ten. Two thousand, forty.

T: What is the name of the unit with the greatest value?

S: Thousands.

T: Compare the value of the thousands.

S: 3 thousands is greater than 2 thousands.  2 thousands is less than 3 thousands.

T: Tell your partner what would happen if we only compared tens rather than the unit with the greatest value.

S: We would say that 2,040 is greater than 3,010, but that isn’t right.  The number with more of the largest unit being compared is greater.  We don’t need to compare the tens because the thousands are different.

T: Thousands is our largest unit.  3 thousands is greater than 2 thousands so 3,010 is greater than 2,040.  (Write the comparison symbol “>” in the circle.)  Write this comparison statement on your board and say it to your partner in two different ways.

S: (Write 3,010 > 2,040.)  3,010 is greater than 2,040.  2,040 is less than 3,010.

Problem 2: Comparing two numbers with an equal amount of the largest units.

Display:  43,021          45,302

T: Model and read each number.  How is this comparison different from our first comparison?

S: Before, our largest unit was thousands.  Now, our largest unit is ten thousands.  In this comparison, both numbers have the same number of ten thousands.

T: If the digits of the largest unit are equal, how do we compare?

S: We compare the thousands.  We compare the next largest unit.  We compare the digit one place to the right.

T: Write your comparison statement on your board.  Say the comparison statement in two ways.

S: (Write 43,021 < 45,302 and 45,302 > 43,021.)  43,021 is less than 45,302.  45,302 is greater than 43,021.

Repeat the comparison process using 2,305 and 2,530 and then 970,461 and 907,641.

T: Write your own comparison problem for your partner to solve.  Create a two number comparison problem in which the largest unit in both numbers is the same.
Problem 3: Comparing values of multiple numbers using a place value chart.

Display: 32,434, 32,644, and 32,534.

T: Write these numbers in your place value chart. Whisper the value of each digit as you do so.

T: When you compare the value of these three numbers, what do you notice?

S: All three numbers have 3 ten thousands. → All three numbers have 2 thousands. → We can compare the hundreds because they are different.

T: Which number has the greatest value?

S: 32,644.

T: Tell your partner which number has the least value and how you know.

S: 32,434 is the smallest of the three numbers because it has the least number of hundreds.

T: Write the numbers from greatest to least. Use comparison symbols to express the relationships of the numbers.

S: (Write 32,644 > 32,534 > 32,434.)

Problem 4: Comparing numbers in different number forms.

Display: Compare 700,000 + 30,000 + 20 + 8 and 735,008.

T: Discuss with your partner how to solve and write your comparison.

S: I will write the numerals in my place value chart to compare. → Draw disks for each number. → I’ll write the first number in standard form, then compare.

S: (Write 730,028 < 735,008.)

T: Tell your partner which units you compared and why.

S: I compared thousands because the larger units were the same. 5 thousands are greater than 0 thousands, so 735,008 is greater than 730,028.

Repeat with 4 hundred thousands 8 thousands 9 tens and 40,000 + 8,000 + 90.
Lesson 5

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Compare numbers based on meanings of the digits using >, <, or = to record the comparison.

Invite students to review their solutions for the Problem Set and the totality of the lesson experience. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set.

You may choose to use any combination of the questions below to lead the discussion.

- When comparing numbers, which is more helpful to you: lining up digits or lining up place value disks in a place value chart? Explain.
- How is comparing numbers in Problem 1(a) different from Problem 1(b)?
- How does your understanding of place value help you to compare and order numbers?
- How can ordering numbers apply to real life?
- What challenges arise in comparing numbers when the numbers are written in different forms, such as in Problem 2?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
### Lesson 5 Sprint

**Lesson 5:** Compare numbers based on meanings of the digits using >, <, or = to record the comparison.

Date: 8/19/14

Lesson 5 Problem Set

Name ________________________________ Date ____________________

1. Label the units in the place value chart. Draw place value disks to represent each number in the place value chart. Use <, >, or = to compare the two numbers. Write the correct symbol in the circle.

   a.  600,015   60,015

   b.  409,004  440,002

2. Compare the two numbers by using the symbols <, >, and =. Write the correct symbol in the circle.

   a.  342,001  94,981

   b.  500,000 + 80,000 + 9,000 + 100  five hundred eight thousand, nine hundred one

   c.  9 hundred thousands 8 thousands 9 hundreds 3 tens  908,930

   d.  9 hundreds 5 ten thousands 9 ones  6 ten thousands 5 hundreds 9 ones
3. Use the information in the chart below to list the height in feet of each mountain from least to greatest. Then, name the mountain that has the lowest elevation in feet.

<table>
<thead>
<tr>
<th>Name of Mountain</th>
<th>Elevation in Feet (ft.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Allen Mountain</td>
<td>4,340 ft.</td>
</tr>
<tr>
<td>Mount Marcy</td>
<td>5,344 ft.</td>
</tr>
<tr>
<td>Mount Haystack</td>
<td>4,960 ft.</td>
</tr>
<tr>
<td>Slide Mountain</td>
<td>4,240 ft.</td>
</tr>
</tbody>
</table>

4. Arrange these numbers from least to greatest: 8,002 2,080 820 2,008 8,200

5. Arrange these numbers from greatest to least: 728,000 708,200 720,800 87,300

6. One astronomical unit, or 1 AU, is the approximate distance from Earth to the sun. The following are the approximate distances from Earth to nearby stars given in AUs:

Alpha Centauri is 275,725 AUs from Earth.
Proxima Centauri is 268,269 AUs from Earth.
Epsilon Eridani is 665,282 AUs from Earth.
Barnard’s Star is 377,098 AUs from Earth.
Sirius is 542,774 AUs from Earth.

List the names of the stars and their distances in AUs in order from closest to farthest from Earth.
Name ____________________________ Date __________________

1. Four friends played a game. The player with the most points wins. Use the information in the table below to order the number of points each player earned from least to greatest. Then, name the person who won the game.

<table>
<thead>
<tr>
<th>Player Name</th>
<th>Points Earned</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amy</td>
<td>2,398 points</td>
</tr>
<tr>
<td>Bonnie</td>
<td>2,976 points</td>
</tr>
<tr>
<td>Jeff</td>
<td>2,709 points</td>
</tr>
<tr>
<td>Rick</td>
<td>2,699 points</td>
</tr>
</tbody>
</table>

2. Use each of the digits 5, 4, 3, 2, 1 exactly once to create two different five-digit numbers.

a. Write each number on the line and compare the two numbers by using the symbols < or >.

Write the correct symbol in the circle.

__________________  __________________

b. Use words to write a comparison statement for the problem above.
Lesson 5 Homework

Name ______________________________________ Date __________________

1. Label the units in the place value chart. Draw place value disks to represent each number in the place value chart. Use <, >, or = to compare the two numbers. Write the correct symbol in the circle.

   a.  909,013  □  90,013

   b.  210,005  □  220,005

2. Compare the two numbers by using the symbols <, >, and =. Write the correct symbol in the circle.

   a.  501,107  □  89,171

   b.  300,000 + 50,000 + 1,000 + 800  □  six hundred five thousand, nine hundred eight

   c.  3 hundred thousands 3 thousands 8 hundreds 4 tens  □  303,840

   d.  5 hundreds 6 ten thousands 2 ones  □  3 ten thousands 5 hundreds 1 one
3. Use the information in the chart below to list the height, in feet, of each skyscraper from shortest to tallest. Then, name the tallest skyscraper.

<table>
<thead>
<tr>
<th>Name of Skyscraper</th>
<th>Height of Skyscraper (ft.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Willis Tower</td>
<td>1,450</td>
</tr>
<tr>

<tr>
<td>Petronas Towers</td>
<td>1,483</td>
</tr>
</tbody>
</table>

4. Arrange these numbers from least to greatest: 7,550 5,070 750 5,007 7,505

5. Arrange these numbers from greatest to least: 426,000 406,200 640,020 46,600

6. The areas of the 50 states can be measured in square miles (sq. miles).

California is 158,648 sq. miles. Nevada is 110,567 sq. miles. Arizona is 114,007 sq. miles. Texas is 266,874 sq. miles. Montana is 147,047 sq. miles, and Alaska is 587,878 sq. miles.

Arrange the states in order from least area to greatest area.
Lesson 5:

Compare numbers based on meanings of the digits using >, <, or = to record the comparison.

Date: 8/19/14

unlabeled hundred thousand place value chart
Lesson 6

Objective: Find 1, 10, and 100 thousand more and less than a given number.

Suggested Lesson Structure

- Fluency Practice (12 minutes)
- Application Problem (4 minutes)
- Concept Development (33 minutes)
- Student Debrief (11 minutes)

Total Time (60 minutes)

Fluency Practice (12 minutes)

- Unit Skip-Counting 4.NBT.1 (3 minutes)
- Rename the Units 4.NBT.2 (5 minutes)
- Compare Numbers 4.NBT.2 (4 minutes)

Unit Skip-Counting (3 minutes)

Note: This activity applies skip-counting fluency to the multiplying by ten lessons.

T: Count by threes to 30.
S: 3, 6, 9, 12, 15, 18, 21, 24, 27, 30.

T: Now count by 3 ten thousands to 30 ten thousands. Stop counting and raise your hand when you see me raise my hand.
S: 3 ten thousands, 6 ten thousands, 9 ten thousands.

T/S: (Raise hand.)
T: Say the number in standard form.
S: 90,000.

Continue, stopping the students at 15 ten thousands, 21 ten thousands, and 30 ten thousands.

Repeat the process. This time, count by fours to 40 and by 4 hundred thousands to 40 hundred thousands.
Lesson 6: Find 1, 10, and 100 thousand more and less than a given number.

Rename the Units (5 minutes)
Note: This fluency activity applies students’ place value skills in a new context that helps them better access the lesson’s content.

Materials: (S) Personal white board

T: (Write 54,783.) Say the number.
S: 54,783.
T: How many thousands are in 54,783?
S: 54 thousands.
T: (Write 54,783 = _____ thousands _____ ones.) On your personal white boards, fill in the equation.
S: (Write 54,783 = 54 thousands 783 ones.)
T: How many ten thousands are in 54,783?
S: 5 ten thousands.
T: (Write 54,783 = _____ ten thousands _____ hundreds _____ ones.) On your boards, fill in the equation.
S: (Write 54,783 = 5 ten thousands 47 hundreds 83 ones.)

Follow the same process and sequence for 234,673.

Compare Numbers (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews comparing number concepts learned in Lesson 5.

T: (Write 231,005 _____ 83,872.) On your personal white boards, compare the numbers by writing the greater than, less than, or equal to symbol.
S: (Write 231,005 > 83,872.)

Repeat using the following sequence: 6 thousands 4 hundreds 9 tens _______5 ten thousands 4 hundreds 9 ones and 8 hundred thousands 7 thousands 8 hundreds 2 tens ______ 807,820.

Application Problem (4 minutes)

Use the digits 5, 6, 8, 2, 4, and 1 to create two six-digit numbers. Be sure to use each of the digits within both numbers. Express the numbers in word form and use a comparison symbol to show their relationship.

Note: This Application Problem builds on the content of the previous two lessons.

Example: 586,241  412,685

five hundred eighty-six thousand, two hundred forty-one >
four hundred twelve thousand, six hundred eighty-five
Concept Development (33 minutes)

Materials: (T) Unlabeled hundred thousands place value chart (Lesson 5 Template) (S) Personal white board, unlabeled hundred thousands place value chart (Lesson 5 Template)

Problem 1: Find 1 thousand more and 1 thousand less.

T: (Draw 2 thousand disks in the place value chart.) How many thousands do you count?
S: Two thousands.
T: What number is one thousand more? (Draw 1 more thousand.)
S: Three thousands.
T: (Write 3 thousands 112 ones.) Model this number with disks and write its expanded and standard form.
S: (Write 3,000 + 100 + 10 + 2. 3,112.)
T: Draw 1 more unit of one thousand. What number is 1 thousand more than 3,112?
S: 4,112 is 1 thousand more than 3,112.
T: 1 thousand less than 3,112?
S: 2,112.
T: Draw 1 ten thousand disk. What number do you have now?
S: 14,112.
T: Show 1 less unit of 1 thousand. What number is 1 thousand less than 14,112?
S: 13,112.
T: 1 thousand more than 14,112?
S: 15,112.
T: Did the largest unit change? Discuss with your partner.
S: (Discuss.)
T: Show 19,112. (Pause as students draw.) What is 1 thousand less? 1 thousand more than 19,112?
S: 18,112. 20,112.
T: Did the largest unit change? Discuss with your partner.
S: (Discuss.)
T: Show 199,465. (Pause as they do so.) What is 1 thousand less? 1 thousand more than 199,465?
T: Did the largest unit change? Discuss with your partner.
S: (Discuss.)
Lesson 6: Find 1, 10, and 100 thousand more and less than a given number.

Date: 8/19/14

Problem 2: Find 10 thousand more and 10 thousand less.

T: Use numbers and disks to model 2 ten thousands 3 thousands. Read and write the expanded form.

S: (Model, read and write 20,000 + 3,000 = 23,000.)

T: What number is 10 thousand more than 2 ten thousands 3 thousands? Draw, read, and write the expanded form.

S: (Model, read and write 20,000 + 10,000 + 3,000 = 33,000.)

T: (Display 100,000 + 30,000 + 4,000.) Use disks and numbers to model the sum. What number is 10 thousand more than 134,000? Say your answer as an addition sentence.

S: 10,000 plus 134,000 is 144,000.

T: (Display 25,130 – 10,000.) What number is 10 thousand less than 25,130? Work with your partner to use numbers and disks to model the difference. Write and whisper to your partner an equation in unit form to verify your answer.

S: (Model, read, and write 2 ten thousands 5 thousands 1 hundred 3 tens minus 1 ten thousand is 1 ten thousand 5 thousands 1 hundred 3 tens.)

Problem 3: Find 100 thousand more and 100 thousand less.

T: (Display 200,352.) Work with your partner to find the number that is 100 thousand more than 200,352. Write an equation to verify your answer.

S: (Write 200,352 + 100,000 = 300,352.)

T: (Display 545,000 and 445,000 and 345,000.) Read these three numbers to your partner. Predict the next number in my pattern and explain your reasoning.

S: I predict the next number will be 245,000. I notice the numbers decrease by 100,000. 345,000 minus 100,000 is 245,000. → I notice the hundred thousand units decreasing: 5 hundred thousands, 4 hundred thousands, 3 hundred thousands. I predict the next number will have 2 hundred thousands. I notice the other units do not change, so the next number will be 2 hundred thousands 4 ten thousands 5 thousands.

NOTES ON MULTIPLE MEANS OF ENGAGEMENT:

After students predict the next number in the pattern, ask students to create their own pattern using the strategy of one thousand more or less, ten thousand more or less, or one hundred thousand more or less. Then, ask students to challenge their classmates to predict the next number in the pattern.
Lesson 6: Find 1, 10, and 100 thousand more and less than a given number...

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (11 minutes)

Lesson Objective: Find 1, 10, and 100 thousand more and less than a given number.

 Invite students to review their solutions for the Problem Set and the totality of the lesson experience. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set.

You may choose to use any combination of the questions below to lead the discussion.

- When drawing place value disks in the Problem Set, how did you show that a number was added or that a number was taken away? If you used symbols, which symbols did you use?
- Look at Problem 2 in the Problem Set. How did you solve? Compare your method to your partner’s. How else could you model?
- Why were Problem 3(e) and (f) more challenging than the rest? How did you use your place value knowledge to solve?
- Look at Problem 4. What strategy did you use to complete the pattern? How many ways can we model to solve? Which way is best? Why do you think so?
- Compare Problem 3 and Problem 4. Which was easier to solve? Why?
- How does your understanding of place value help you add or subtract 1,000, 10,000, and 100,000?
- What place value patterns have we discovered?
Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Lesson 6 Problem Set

Name ________________________________ Date ________________

1. Label the place value chart. Use place value disks to find the sum or difference. Write the answer in standard form on the line.

   a. 10,000 more than six hundred five thousand, four hundred seventy-two is ________________.

   

   b. 100 thousand less than 400,000 + 80,000 + 1,000 + 30 + 6 is ________________.

   

   c. 230,070 is ________________________________ than 130,070.

   

2. Lucy plays an online math game. She scored 100,000 more points on Level 2 than on Level 3. If she scored 349,867 points on Level 2, what was her score on Level 3? Use pictures, words, or numbers to explain your thinking.
3. Fill in the blank for each equation.
   a. $10,000 + 40,060 = \underline{\hspace{2cm}}$
   b. $21,195 - 10,000 = \underline{\hspace{2cm}}$
   c. $999,000 + 1,000 = \underline{\hspace{2cm}}$
   d. $129,231 - 100,000 = \underline{\hspace{2cm}}$
   e. $122,000 = 22,000 + \underline{\hspace{2cm}}$
   f. $38,018 = 39,018 - \underline{\hspace{2cm}}$

4. Fill in the empty boxes to complete the patterns.
   a. 
      
      
      
   b. 
      
      
      
   c. 
      
      
      
   d. 
      
      
      
   Explain in pictures, numbers, or words how you found your answers.
1. Fill in the empty boxes to complete the pattern.

```
468,235   |   | 471,235 | 472,235
```

Explain in pictures, numbers, or words how you found your answers.

2. Fill in the blank for each equation.
   
a. $1,000 + 56,879 = \underline{\hspace{2cm}}$
   
b. $324,560 - 100,000 = \underline{\hspace{2cm}}$
   
c. $456,080 - 10,000 = \underline{\hspace{2cm}}$
   
d. $10,000 + 786,233 = \underline{\hspace{2cm}}$

3. The population of Rochester, NY in the 2000 Census was 219,782. The 2010 Census found that the population decreased by about 10,000. About how many people lived in Rochester in 2010? Explain in pictures, numbers, or words how you found your answer.
Lesson 6 Homework

Name ___________________________________________ Date ______________

1. Label the place value chart. Use place value disks to find the sum or difference. Write the answer in standard form on the line.
   
   a. 100,000 less than five hundred sixty thousand, three hundred thirteen is _____________.

   b. Ten thousand more than 300,000 + 90,000 + 5,000 + 40 is _________________.

   c. 447,077 is ________________ than 347,077.

2. Fill in the blank for each equation:
   
   a. 100,000 + 76,960 = ____________  
      b. 13,097 – 1,000 = ____________

   c. 849,000 – 10,000 = ____________  
      d. 442,210 + 10,000 = ____________

   e. 172,090 = 171,090 + ____________  
      f. 854,121 = 954,121 – ____________
3. Fill in the empty boxes to complete the patterns.

a. 145,555  |  147,555  |  149,555

Explain in pictures, numbers, or words how you found your answers.

b. 764,321  |  774,321  |  804,321

Explain in pictures, numbers, or words how you found your answers.

c. 125,876  |  225,876  |  425,876

Explain in pictures, numbers, or words how you found your answers.

d. 254,445  |  |  224,445  |  214,445

Explain in pictures, numbers, or words how you found your answers.

4. In 2012, Charlie earned an annual salary of $54,098. At the beginning of 2013, Charlie’s annual salary was raised by $10,000. How much money will Charlie earn in 2013? Use pictures, words, or numbers to explain your thinking.
Topic C
Rounding Multi-Digit Whole Numbers

4.NBT.3

Focus Standard: 4.NBT.3 Use place value understanding to round multi-digit whole numbers to any place.
Instructional Days: 4
Coherence -Links from: G3–M2 Place Value and Problem Solving with Units of Measure
-Links to: G5–M1 Place Value and Decimal Fractions

In Topic C, students round to any place using the vertical number line and approximation. The vertical number line allows students to line up place values of the numbers they are comparing. In Grade 3, students rounded to the nearest 10 or 100 using place value understanding. Now, they extend this understanding rounding to the nearest thousand, ten thousand, and hundred thousand. Uniformity in the base ten system easily transfers understanding from the Grade 3 (3.NBT.1) to Grade 4 (4.NBT.3) standard.

Rounding to the leftmost unit is easiest for students, but Grade 4 students learn the advantages to rounding to any place value, which increases accuracy. Students move from dependency on the number line and learn to round a number to a particular unit. To round 34,108 to the nearest thousand, students find the nearest multiple, 34,000 or 35,000, by seeing if 34,108 is more than or less than halfway between the multiples. The final lesson of Topic C presents complex and real world examples of rounding, including instances where the number requires rounding down, but the context requires rounding up.

A Teaching Sequence Towards Mastery of Rounding Multi-Digit Whole Numbers

Objective 1: Round multi-digit numbers to the thousands place using the vertical number line.
   (Lesson 7)

Objective 2: Round multi-digit numbers to any place using the vertical number line.
   (Lesson 8)

Objective 3: Use place value understanding to round multi-digit numbers to any place value.
   (Lesson 9)

Objective 4: Use place value understanding to round multi-digit numbers to any place value using real world applications.
   (Lesson 10)
Lesson 7

Objective: Round multi-digit numbers to the thousands place using the vertical number line.

Suggested Lesson Structure

- Fluency Practice (15 minutes)
- Application Problem (6 minutes)
- Concept Development (27 minutes)
- Student Debrief (12 minutes)
- Total Time (60 minutes)

Fluency Practice (15 minutes)

- Change Place Value 4.NBT.1 (5 minutes)
- Number Patterns 4.NBT.1 (5 minutes)
- Find the Midpoint 4.NBT.3 (5 minutes)

Change Place Value (5 minutes)

Materials: (S) Personal white board, unlabeled hundred thousands place value chart (Lesson 5 Template)

Note: This fluency activity reviews Lesson 6’s content.

T: (Project place value chart. Write 3 hundred thousands, 5 ten thousands, 2 thousands, 1 hundred, 5 tens, and 4 ones.) On your personal white board, draw place value disks and write the numbers beneath it.

S: (Draw disks and write 352,154.)

T: Show 100 more.

S: (Draw 1 more 100 disk, erase the number 1 in the hundreds place, and replace it with a 2 so that their boards now read 352,254.)

Possible further sequence: 10,000 less, 100,000 more, 1 less, and 10 more.

Repeat with the following: 7,385; 297,084; and 306,032.
Lesson 7

Number Patterns (5 minutes)

Materials: (S) Personal white board

Note: This activity synthesizes skip-counting fluency with Lesson 6’s content and applies it in a context that lays a foundation for rounding multi-digit numbers to the thousands place.

T: (Project 50,300; 60,300; 70,300; ____.) What is the place value of the digit that’s changing?
S: Ten thousand.
T: Count with me saying the value of the digit I’m pointing to. (Point at the ten thousand digit as students count.)
S: 50,000; 60,000; 70,000.
T: On your personal board, write what number would come after 70,300.
S: (Write 80,300.)
Repeat for the following possible sequence, using place value disks if students are struggling:

92,010  82,010  72,010  ___
135,004 136,004  137,004  ___
832,743 832,643  832,543  ___
271,543 281,543  291,543  ___

Find the Midpoint (5 minutes)

Materials: (S) Personal white board

Note: Practicing this skill in isolation lays a foundation to conceptually understand rounding on a vertical number line and reviews Grade 3 skills in anticipation of this lesson.

Project a vertical number line with endpoints 10 and 20.

T: What’s halfway between 10 and 20?
S: 15.
T: (Write 15 halfway between 10 and 20. Draw a second line with 1,000 and 2,000 as the endpoints.) How many hundreds are in 1,000?
S: 10 hundreds.
T: (Below 1,000, write 10 hundreds.) How many hundreds are in 2,000?
S: 20 hundreds.
T: (Write 20 hundreds below 2,000.) What’s halfway between 10 hundreds and 20 hundreds?
S: 15 hundreds.
T: (Write 1,500 halfway between 1,000 and 2,000. Below 1,500, write 15 hundreds.) On your personal board, draw a vertical number line with two endpoints and a midpoint.
S: (Draw number line with two endpoints and a midpoint.)
Lesson 7

Round multi-digit numbers to the thousands place using the vertical number line.

Date: 5/26/14

Lesson 7

T: Label 31,000 and 32,000 as endpoints.
S: (Label 31,000 and 32,000 as endpoints.)
T: How many hundreds are in 31,000?
S: 310 hundreds.
T: How many hundreds are in 32,000?
S: 320 hundreds.
T: Identify the midpoint.
S: (Write 31,500.)

Repeat process and procedure to find the midpoint of 831,000 and 832,000; 63,000 and 64,000; 264,000 and 265,000; and 99,000 and 100,000.

Application Problem (6 minutes)

According to their pedometers, Mrs. Alsup's class took a total of 42,619 steps on Tuesday. On Wednesday, they took ten thousand more steps than they did on Tuesday. On Thursday, they took one thousand fewer steps than they did on Wednesday. How many steps did Mrs. Alsup's class take on Thursday?

Note: This Application Problem builds on the concept of the previous lesson requiring students to find 1 thousand, 10 thousand, or 100 thousand more or less than a given number.

Concept Development (27 minutes)

Materials: (S) Personal white board

Problem 1: Use a vertical number line to round four-digit numbers to the nearest thousand.

T: (Draw a vertical number line with 2 endpoints.) We are going to round 4,100 to the nearest thousand. How many thousands are in 4,100?
S: 4 thousands.
T: (Mark the lower endpoint with 4 thousands.) And 1 more thousand would be?
S: 5 thousands.
T: (Mark the upper endpoint with 5 thousands.) What's halfway
between 4 thousands and 5 thousands?

S: 4,500.

T: (Label 4,500 on the number line.) Where should I label 4,100? Tell me where to stop. (Move your marker up the line.)

S: Stop!

T: (Label 4,100 on the number line.) Is 4,100 nearer to 4 thousands or 5 thousands?

S: 4,100 is nearer to 4 thousands.

T: True. We say 4,100 rounded to the nearest thousand is 4,000.

T: (Label 4,700 on the number line.) What about 4,700?

S: 4,700 is nearer to 5 thousands.

T: Therefore, we say 4,700 rounded to the nearest thousand is 5,000.

Problem 2: Use a vertical number line to round five- and six-digit numbers to the nearest thousand.

T: Let’s round 14,500 to the nearest thousand. How many thousands are there in 14,500?

S: 14 thousands.

T: What’s 1 more thousand?

S: 15 thousands.

T: Designate the endpoints on your number line. What is halfway between 14,000 and 15,000?

S: 14,500. Hey, that’s the number that we are trying to round to the nearest thousand.

T: True. 14,500 is right in the middle. It is the halfway point. It is not closer to either number. The rule is that we round up. 14,500 rounded to the nearest thousand is 15,000.

T: With your partner, mark 14,990 on your number line and round it to the nearest thousand.

S: 14,990 is nearer to 15 thousands or 15,000.

T: Mark 14,345 on your number line. Talk with your partner about how to round it to the nearest thousand.

S: 14,345 is nearer to 14 thousands. 14,345 is nearer to 14,000. 14,345 rounded to the nearest thousand is 14,000.

T: Is 14,345 more than or less than the halfway point?

S: Less than.

T: We can look to see if 14,345 is closer to 14,000 or 15,000, and we can also look to see if it is greater than or less than the halfway point. If it is less than the halfway point, it is closer to 14,000.

Repeat using the numbers 215,711 and 214,569 rounding to the nearest thousand, naming how many thousands are in each number.
Lesson 7: Round multi-digit numbers to the thousands place using the vertical number line.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (12 minutes)

Lesson Objective: Round multi-digit numbers to the thousands place using the vertical number line.

Invite students to review their solutions for the Problem Set and the totality of the lesson experience. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set.

You may choose to use any combination of the questions below to lead the discussion.

- Look at Problem 1 in the Problem Set. Compare how you rounded 6,700 and 16,401. Explain how your rounding to the nearest thousand differed even though both numbers have a 6 in the thousands place.
- What was your strategy for solving Problem 4? How did the vertical number line support your thinking?
- What makes 5 special in rounding?
- How does the number line help you round numbers? Is there another way you prefer? Why?
- What is the purpose of rounding?
- When might we use rounding or estimation?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Lesson 7 Problem Set

1. Round to the nearest thousand. Use the number line to model your thinking.

   a. 6,700 ≈ ______________

   b. 9,340 ≈ ______________

   c. 16,401 ≈ ______________

   d. 39,545 ≈ ______________

   e. 399,499 ≈ ______________

   f. 840,007 ≈ ______________

2. A pilot wanted to know about how many kilometers he flew on his last 3 flights. From NYC to London, he flew 5,572 km. Then, from London to Beijing, he flew 8,147 km. Finally, he flew 10,996 km from Beijing back to NYC. Round each number to the nearest thousand, and then find the sum of the rounded numbers to estimate about how many kilometers the pilot flew.

3. Mrs. Smith’s class is learning about healthy eating habits. The students learned that the average child should consume about 12,000 calories each week. Kerry consumed 12,748 calories last week. Tyler consumed 11,702 calories last week. Round to the nearest thousand to find who consumed closer to the recommended number of calories. Use pictures, numbers, or words to explain.

4. For the 2013-2014 school year, the cost of tuition at Cornell University was $43,000 when rounded to the nearest thousand. What is the greatest possible amount the tuition could be? What is the least possible amount the tuition could be?
Lesson 7 Exit Ticket

Name ___________________________________________  Date ____________________

1. Round to the nearest thousand. Use the number line to model your thinking.
   
   ![Number Line Diagram]

   a. 7,621 ≈ ___________  
   b. 12,502 ≈ ___________  
   c. 324,087 ≈ ___________

2. It takes 39,090 gallons of water to manufacture a new car. Sammy thinks that rounds up to about 40,000 gallons. Susie thinks it is about 39,000 gallons. Who rounded to the nearest thousand, Sammy or Susie? Use pictures, numbers, or words to explain.
1. Round to the nearest thousand. Use the number line to model your thinking.

   a. 5,900 ≈ ____________

   b. 4,180 ≈ ____________

   c. 32,879 ≈ ____________

   d. 78,600 ≈ ____________

   e. 251,031 ≈ ____________

   f. 699,900 ≈ ____________
2. Steven put together 981 pieces of a puzzle. About how many pieces did they put together? Round to the nearest thousand. Use what you know about place value to explain your answer.

3. Louise’s family went on vacation to Disney World. Their vacation cost $5,990. Sophia’s family went on vacation to Niagara Falls. Their vacation cost $4,720. Both families budgeted about $5,000 for their vacation. Whose family stayed closer to the budget? Round to the nearest thousand. Use what you know about place value to explain your answer.

4. Marsha’s brother wanted help with the first question on his homework. The question asked the students to round 128,902 to the nearest thousand and then to explain the answer. Marsha’s brother thought that the answer was 128,000. Was his answer correct? How do you know? Use pictures, numbers, or words to explain.
Lesson 8

Objectives: Round multi-digit numbers to any place using the vertical number line.

Suggested Lesson Structure

- Fluency Practice (12 minutes)
- Application Problem (6 minutes)
- Concept Development (32 minutes)
- Student Debrief (10 minutes)
- Total Time (60 minutes)

Fluency Practice (12 minutes)

- Sprint: Find the Midpoint 4.NBT.3 (9 minutes)
  - Rename the Units 4.NBT.2 (3 minutes)

Sprint: Find the Midpoint (9 minutes)

Materials: (S) Find the midpoint Sprint

Note: Practicing this skill in isolation lays a foundation to conceptually understand rounding on a vertical number line.

Rename the Units (3 minutes)

Materials: (S) Personal white board

Note: This fluency activity applies students’ place value skills in a new context that helps them better access the lesson’s content.

  - T: (Write 357,468.) Say the number.
  - S: 357,468.
  - T: (Write 357,468 = ____ thousands 468 ones.) On your personal white boards, fill in the equation.
  - S: (Write 357,468 = 357 thousands 468 ones.)

Repeat process for 357,468 = ____ ten thousands 7,468 ones; 357,468 = ____ hundreds 6 tens 8 ones; and 357,468 = ____ tens 8 ones.
Application Problem (6 minutes)

Jose’s parents bought a used car, a new motorcycle, and a used snowmobile. The car cost $8,999. The motorcycle cost $9,690. The snowmobile cost $4,419. About how much money did they spend on the three items?

Note: This Application Problem builds on the content of previous lessons. Students are required to round and then to add base thousand units.

Concept Development (32 minutes)

Materials: (S) Personal white board

Problem 1: Use a vertical number line to round five- and six-digit numbers to the nearest ten thousand.

(Display a number line with endpoints 70,000 and 80,000.)

T: We are going to round 72,744 to the nearest ten thousand. How many ten thousands are in 72,744?
S: 7 ten thousands.
T: (Mark the lower endpoint with 7 ten thousands.) And 1 more ten thousand would be?
S: 8 ten thousands.
T: (Mark the upper endpoint with 8 ten thousands.) What’s halfway between 7 ten thousands and 8 ten thousands?
S: 7 ten thousands 5 thousands. → 75,000.
T: (Mark 75,000 on the number line.) Where should I label 72,744? Tell me where to stop. (Move your marker up the line.)
S: Stop.
T: (Mark 72,744 on the number line.) Is 72,744 nearer to 70,000 or 80,000?
S: 72,744 is nearer to 70,000.

Car $8,999 & 9,000
Motorcycle $9,690 & 10,000
Snowmobile $4,419 & 4,000

9 thousands + 10 thousands + 4 thousands = 23 thousands
Jose’s parents spent about $23,000.
Lesson 8
NYS COMMON CORE MATHEMATICS CURRICULUM

Lesson 8:
Round multi-digit numbers to any place value using the vertical number line.

© 2014 Common Core, Inc. Some rights reserved. commoncore.org

NOTES ON MULTIPLE MEANS OF ENGAGEMENT:
Make the lesson relevant to students’ lives. Discuss everyday instances of estimation. Elicit examples of when we need a general idea about a sum or difference rather than an exact answer. Ask, “When is it appropriate to estimate? When do we need an exact answer?”

T: We say 72,744 rounded to the nearest ten thousand is 70,000.
Repeat with 337,601 rounded to the nearest ten thousand.

Problem 2: Use a vertical number line to round six-digit numbers to the nearest hundred thousand.

T: (Draw a number line to round 749,085 to the nearest hundred thousand.) We are going to round 749,085 to the nearest hundred thousand. How many hundred thousands are in 749,085?

S: 7 hundred thousands.

T: What’s 1 more hundred thousand?

S: 8 hundred thousands.

T: Label your endpoints on the number line. What is halfway between 7 hundred thousands and 8 hundred thousands?

S: 7 hundred thousands 5 ten thousands. \( \rightarrow \) 750,000.

T: Designate the midpoint on the number line. With your partner, mark 749,085 on the number line and round it to the nearest hundred thousand.

S: 749,085 is nearer to 7 hundred thousands. \( \rightarrow \) 749,085 is nearest to 700,000. \( \rightarrow \) 749,085 rounded to the nearest hundred thousand is 700,000.

Repeat with 908,899 rounded to the nearest hundred thousand.

Problem 3: Estimating with addition and subtraction.

T: (Write 505,341 + 193,841.) Without finding the exact answer, I can estimate the answer by first rounding each addend to the nearest hundred thousand and then adding the rounded numbers.

T: Use a number line to round both numbers to the nearest hundred thousand.

S: (Round 505,341 to 500,000. Round 193,841 to 200,000.)

T: Now add 500,000 + 200,000.

S: 700,000.

T: So, what’s a good estimate for the sum of 505,341 and 193,841?

S: 700,000.

T: (Write 35,555 – 26,555.) How can we use rounding to estimate the answer?

S: Let’s round each number before we subtract.

T: Good idea. Discuss with your partner how you will round to estimate the difference.

S: I can round each number to the nearest ten thousand. That way I’ll have mostly zeros in my numbers. 40,000 minus 30,000 is 10,000. \( \rightarrow \) 35,555 minus 26,555 is like 35 minus 26 which is 9.
Lesson 8: Round multi-digit numbers to any place value using the vertical number line.

35,000 minus 26,000 is 9,000. → It’s more accurate to round up. 36,000 minus 27,000 is 9,000. Hey, it’s the same answer!

T: What did you discover?

S: It’s easier to find an estimate rounded to the largest unit. → We found the same estimate even though you rounded up and I rounded down. → We got two different estimates!

T: Which estimate do you suppose is closer to the actual difference?

S: I think 9,000 is closer because we changed fewer numbers when we rounded.

T: How might we find an estimate even closer to the actual difference?

S: We could round to the nearest hundred or ten.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Round multi-digit numbers to any place value using the vertical number line.

Invite students to review their solutions for the Problem Set and the totality of the lesson experience. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set.

You may choose to use any combination of the questions below to lead the discussion.

- Compare Problem 1(b) and (c). How did you determine your endpoints for each number line?
- Tell your partner your steps for rounding a number. Which step is most difficult for you?
Why?

- Look at Problem 5. How did your estimates compare? What did you notice as you solved?
- What are the benefits and drawbacks of rounding the same number to different units (as you did in Problem 5)?
- In what real life situation might you make an estimate like Problem 5?

Write and complete one of the following statements in your math journal:

- The purpose of rounding addends is _____.
- Rounding to the nearest _____ is best when _____.

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.

Complete each statement by rounding the number to the given place value. Use the number line to show your work.

1. a. 53,000 rounded to the nearest ten thousand is _______________.

b. 42,708 rounded to the nearest ten thousand is _______________.

c. 406,823 rounded to the nearest ten thousand is _______________.

2. a. 240,000 rounded to the nearest hundred thousand is _______________.

b. 449,019 rounded to the nearest hundred thousand is _______________.

c. 964,103 rounded to the nearest hundred thousand is _______________.

3. 975,462 songs were downloaded in one day. Round this number to the nearest hundred thousand to estimate how many songs were downloaded in one day. Use a number line to show your work.

4. This number was rounded to the nearest ten thousand. List the possible digits that could go in the thousands place to make this statement correct. Use a number line to show your work.

\[13\_644 \approx 130,000\]

5. Estimate the difference by rounding each number to the given place value.

\[712,350 - 342,802\]

a. Round to the nearest ten thousands.

b. Round to the nearest hundred thousands.
Lesson 8 Exit Ticket

Name ___________________________________________ Date ________________

1. Round to the nearest ten thousand. Use the number line to model your thinking.

   ![Number Line a]  
   a. 35,124 ≈ ___________  
   b. 981,657 ≈ ___________

2. Round to the nearest hundred thousand. Use the number line to model your thinking.

   ![Number Line b]  
   a. 89,678 ≈ ___________  
   b. 999,765 ≈ ___________

3. Estimate the sum by rounding each number to the nearest hundred thousand.

   257,098 + 548,765 ≈ ___________
Lesson 8 Homework

Complete each statement by rounding the number to the given place value. Use the number line to show your work.

1. a. 67,000 rounded to the nearest ten thousand is _______________.
   b. 51,988 rounded to the nearest ten thousand is _______________.
   c. 105,159 rounded to the nearest ten thousand is _______________.

2. a. 867,000 rounded to the nearest hundred thousand is _______________.
   b. 767,074 rounded to the nearest hundred thousand is _______________.
   c. 629,999 rounded to the nearest hundred thousand is _______________.
3. 491,852 people went to the water park in the month of July. Round this number to the nearest hundred thousand to estimate how many people went to the park. Use a number line to show your work.

4. This number was rounded to the nearest hundred thousand. List the possible digits that could go in the ten thousands place to make this statement correct. Use a number line to show your work.

   \[ 1_9,644 \approx 100,000 \]

5. Estimate the sum by rounding each number to the given place value.

   \[ 164,215 + 216,088 \]

   a. Round to the nearest ten thousand.

   b. Round to the nearest hundred thousand.
Lesson 9

Objective: Use place value understanding to round multi-digit numbers to any place value.

Suggested Lesson Structure

- Fluency Practice (12 minutes)
- Application Problem (8 minutes)
- Concept Development (30 minutes)
- Student Debrief (10 minutes)

Total Time (60 minutes)

Fluency Practice (12 minutes)

- Multiply by Ten 4.NBT.1 (5 minutes)
- Round to Different Place Values 4.NBT.3 (7 minutes)

Multiply by Ten (5 minutes)

Materials: (S) Personal white board

Note: This fluency activity deepens the students’ foundation of multiplying by ten.

T: (Write $10 \times 10 = \Box$.) Say the multiplication sentence.

S: $10 \times 10 = 100$.

T: (Write $10 \times \Box$ ten = 100.) On your personal white boards, fill in the blank.

S: (Write $10 \times 1 \text{ ten} = 100$.)

T: (Write $\Box$ ten $\times \Box$ ten = 100.) On your boards, fill in the blanks.

S: (Write $1 \text{ ten} \times 1 \text{ ten} = 100$.)

T: (Write $\Box$ ten $\times \Box$ ten $= \Box$ hundred.) On your boards, fill in the blanks.

S: (Write $1 \text{ ten} \times 1 \text{ ten} = 100$.)

Note: The use of the digit or a unit is intentional. It builds understanding of multiplying by different units (6 ones times 1 ten equals 6 tens, so 6 tens times 1 ten equals 6 hundreds, not 6 tens).
Lesson 9

Lesson 9:
Use place value understanding to round multi-digit numbers to any place value.

Date: 5/26/14

Round to Different Place Values (7 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 8’s objective and lays a foundation for today’s lesson.

T: (Write 63,941.) Say the number.
S: 63,941.
T: Round 63,941 to the nearest ten thousand. Between what 2 ten thousands is 63,941?
S: 6 ten thousands and 7 ten thousands.
T: On your boards, draw a vertical number line with 60,000 and 70,000 as endpoints.
S: (Draw a vertical number line with 60,000 and 70,000 as the endpoints.)
T: What’s halfway between 60,000 and 70,000?
S: 65,000.
T: Label 65,000 as the midpoint on your number line. Label 63,941 on your number line.
S: (Label 63,941 below 65,000 on their number lines.)
T: (Write 63,941 ≈ ____.) On your boards, fill in the blank, rounding 63,941 to the nearest ten thousand.
S: (Write 63,941 ≈ 60,000.)

Repeat process for 63,941 rounded to the nearest thousand, 47,261 rounded to the nearest ten thousand, 47,261 rounded to the nearest thousand, 618,409 rounded to the nearest hundred thousand, 618,409 rounded to the nearest ten thousand, and 618,904 rounded to the nearest thousand.

Application Problem (8 minutes)

34,123 people attended a basketball game. 28,310 people attended a football game. About how many more people attended the basketball game than the football game? Round to the nearest ten thousand to find the answer. Does your answer make sense? What might be a better way to compare attendance?

Note: The Application Problem builds on the concept learned in the previous lesson (4.NBT.3) and on 3.NBT.2. Students are required to round and then to subtract using base thousand units. Students have not practiced an algorithm for subtracting with five digits. Due to the rounded numbers, you may show subtraction using unit form as an alternative method (34 thousand – 28 thousand, instead of 34,000 – 28,000).
Concept Development (30 minutes)

Materials: (S) Personal white board

Problem 1: Rounding to the nearest thousand without using a number line.

T: (Write 4,333 \( \approx \) ____.) Round to the nearest thousand. Between what two thousands is 4,333?
S: 4 thousands and 5 thousands.
T: What is halfway between 4,000 and 5,000?
S: 4,500.
T: Is 4,333 less than or more than halfway?
S: Less than.
T: So 4,333 is nearer to 4,000.
T: (Write 18,753 \( \approx \) ____.) Round to the nearest thousand. Tell your partner between what two thousands 18,753 is located.
S: 18 thousands and 19 thousands.
T: What is halfway between 18 thousands and 19 thousands?
S: 18,500.
T: Round 18,753 to the nearest thousand. Tell your partner if 18,753 is more than or less than halfway.
S: 18,753 is more than halfway. 18,753 is nearer to 19,000. \( \rightarrow \) 18,753 rounded to the nearest thousand is 19,000.

Repeat with 346,560 rounded to the nearest thousand.

Problem 2: Rounding to the nearest ten thousand or hundred thousand without using a vertical line.

T: (Write 65,600 \( \approx \) ____.) Round to the nearest ten thousand. Between what two ten thousands is 65,600?
S: 6 ten thousands and 7 ten thousands.
T: What is halfway between 60,000 and 70,000?
S: 65,000.
T: Is 65,600 less than or more than halfway?
S: 65,600 is more than halfway.
T: Tell your partner what 65,600 is when rounded to the nearest ten thousand.
S: 65,600 rounded to the nearest ten thousand is 70,000.

Repeat with 548,253 rounded to the nearest ten thousand.
Lesson 9: Use place value understanding to round multi-digit numbers to any place value.

Date: 5/26/14

T: (Write 676,000 ≈ ____.) Round 676,000 to the nearest hundred thousand. First tell your partner what your endpoints will be.
S: 600,000 and 700,000.
T: Determine the halfway point.
S: 650,000.
T: Is 676,000 more than or less than the halfway point?
S: More than.
T: Tell your partner what 676,000 is when rounded to the nearest hundred thousand.
S: 676,000 rounded to the nearest hundred thousand is 700,000.

T: (Write 203,301 ≈ ____.) Work with your partner to round 203,301 to the nearest hundred thousand.
T: Explain to your partner how we use the midpoint to round without a number line.
S: We can’t look at a number line, so we have to use mental math to find our endpoints and halfway point. → If we know the midpoint, we can see if the number is greater than or less than the midpoint. → When rounding, the midpoint helps determine which endpoint the rounded number is closer to.

Problem 3: Rounding to any value without using a number line.

T: (Write 147,591 ≈ ____.) Whisper read this number to your partner in standard form. Now, round 147,591 to the nearest hundred thousand.
S: 100,000.
T: Excellent. (Write 147,591 ≈ 100,000. Point to 100,000.)
100,000 has zero ones in the ones place, zero tens in the tens place, zero hundreds in the hundreds place, zero thousands in the thousands place, and zero ten thousands in the ten thousands place. I could add, subtract, multiply, or divide with this rounded number much easier than with 147,591. True? But, what if I wanted a more accurate estimate? Give me a number closer to 147,591 that has (point) a zero in the ones, tens, hundreds, and thousands.
S: 150,000.
T: Why not 140,000?
S: 147,591 is closer to 150,000 because it is greater than the halfway point 145,000.
T: Great. 147,591 rounded to the nearest ten thousand is 150,000. Now let’s round 147,591 to the nearest thousand.
S: 148,000.

NOTES ON MULTIPLE MEANS OF ENGAGEMENT:

Challenge students who are above grade level to look at the many ways that they rounded the number 147,591 to different place values. Have them discuss with a partner what they notice about the rounded numbers. Students should notice that when rounding to the hundred thousands, the answer is 100,000, but when rounding to all of the other places, the answers are closer to 150,000. Have them discuss what this can teach them about rounding.
Lesson 9

Lesson 9: Use place value understanding to round multi-digit numbers to any place value.

Date: 5/26/14

Lesson Objective: Use place value understanding to round multi-digit numbers to any place value.

Invite students to review their solutions for the Problem Set and the totality of the lesson experience. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set.

You may choose to use any combination of the questions below to lead the discussion.

- Explain the reasoning behind your answer for Problem 2(e) and Problem 3(e).
- In Problem 2(e), you and your partner probably wrote different numbers that rounded to 30,000. Explain why your numbers were different. What is the smallest possible number that could round to 30,000 when rounded to the nearest ten thousand? What is the largest possible number that
Lesson 9

Use place value understanding to round multi-digit numbers to any place value.

Date: 5/26/14

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Name ________________________________ Date ______________________

1. Round to the nearest thousand.
   a. $5,300 \approx \underline{\hphantom{00}}$
   b. $4,589 \approx \underline{\hphantom{00}}$
   c. $42,099 \approx \underline{\hphantom{00}}$
   d. $801,504 \approx \underline{\hphantom{00}}$
   e. Explain how you found your answer for Part (d).

2. Round to the nearest ten thousand.
   a. $26,000 \approx \underline{\hphantom{0000}}$
   b. $34,920 \approx \underline{\hphantom{0000}}$
   c. $789,091 \approx \underline{\hphantom{0000}}$
   d. $706,286 \approx \underline{\hphantom{0000}}$
   e. Explain why two problems have the same answer. Write another number that has the same answer when rounded to the nearest ten thousand.

3. Round to the nearest hundred thousand.
   a. $840,000 \approx \underline{\hphantom{000000}}$
   b. $850,471 \approx \underline{\hphantom{000000}}$
   c. $761,004 \approx \underline{\hphantom{000000}}$
   d. $991,965 \approx \underline{\hphantom{000000}}$
   e. Explain why two problems have the same answer. Write another number that has the same answer when rounded to the nearest hundred thousand.
4. Solve the following problems using pictures, numbers, or words.

   a. The 2012 Super Bowl had an attendance of just 68,658 people. If the headline in the newspaper the next day read “About 70,000 People Attend Super Bowl,” how did the newspaper round to estimate the total number of people in attendance?

   b. The 2011 Super Bowl had an attendance of 103,219 people. If the headline in the newspaper the next day read “About 200,000 People Attend Super Bowl,” is the newspaper’s estimate reasonable? Use rounding to explain your answer.

   c. According to the problems above, about how many more people attended the Super Bowl in 2011 than in 2012? Round each number to the largest place value before giving the estimated answer.
Lesson 9 Exit Ticket

Name ____________________________ Date __________________

1. Round 765,903 to the given place value:
   - Thousand ______________________
   - Ten thousand ____________________
   - Hundred thousand _______________

2. There are 16,850 Star coffee shops around the world. Round the number of shops to the nearest thousand and ten thousand. Which answer is more accurate? Explain your thinking using pictures, numbers, or words.
Name ____________________________________________ Date ______________________

1. Round to the nearest thousand.
   a. $6,842 \approx \underline{\hspace{1cm}}$
   b. $2,722 \approx \underline{\hspace{1cm}}$
   c. $16,051 \approx \underline{\hspace{1cm}}$
   d. $706,421 \approx \underline{\hspace{1cm}}$
   e. Explain how you found your answer for Part (d).

2. Round to the nearest ten thousand.
   a. $88,999 \approx \underline{\hspace{1cm}}$
   b. $85,001 \approx \underline{\hspace{1cm}}$
   c. $789,091 \approx \underline{\hspace{1cm}}$
   d. $905,154 \approx \underline{\hspace{1cm}}$
   e. Explain why two problems have the same answer. Write another number that has the same answer when rounded to the nearest ten thousand.

3. Round to the nearest hundred thousand.
   a. $89,659 \approx \underline{\hspace{1cm}}$
   b. $751,447 \approx \underline{\hspace{1cm}}$
   c. $617,889 \approx \underline{\hspace{1cm}}$
   d. $817,245 \approx \underline{\hspace{1cm}}$
   e. Explain why two problems have the same answer. Write another number that has the same answer when rounded to the nearest hundred thousand.
4. Solve the following problems using pictures, numbers, or words.

   a. At President Obama’s inauguration in 2013, the newspaper headlines stated there were about 800,000 people in attendance. If the newspaper rounded to the nearest hundred thousand, what is the largest number and smallest number of people that could have been there?

   b. At President Bush’s inauguration in 2005, the newspaper headlines stated there were about 400,000 people in attendance. If the newspaper rounded to the nearest ten thousand, what is the largest number and smallest number of people that could have been there?

   c. At President Lincoln’s inauguration in 1861, the newspaper headlines stated there were about 30,000 people in attendance. If the newspaper rounded to the nearest thousand, what is the largest number and smallest number of people that could have been there?
Lesson 10

Objective: Use place value understanding to round multi-digit numbers to any place value using real world applications.

Suggested Lesson Structure

- Fluency Practice (12 minutes)
- Application Problem (6 minutes)
- Concept Development (30 minutes)
- Student Debrief (12 minutes)
- Total Time (60 minutes)

Fluency Practice (12 minutes)

- Sprint: Round to the Nearest 10,000 4.NBT.3 (9 minutes)
- Multiply by 10 4.NBT.1 (3 minutes)

Sprint: Round to the Nearest 10,000 (9 minutes)

Materials: (S) Round to the nearest 10,000 Sprint

Note: This fluency activity reviews Lesson 9’s content and work towards automatizing rounding skills.

Multiply by 10 (3 minutes)

Materials: (S) Personal white board

Note: This fluency activity deepens student understanding of base ten units.

T: (Write 10 × 10 = ___.) Say the multiplication sentence.
S: 10 × 10 = 100.
T: (Write ____ten × 10 = 100.) On your personal white boards, fill in the blank.
S: (Write 1 ten × 10 = 100.)
T: (Write ____ten × ____ten = 100.) On your boards, fill in the blanks.
S: (Write 1 ten × 1 ten = 100.)
T: (Write ____ten × ____ten = ____hundred.) On your boards, fill in the blanks.
S: (Write 1 ten × 1 ten = 1 hundred.)
Repeat using the following sequence: 1 ten × 50 = ___, 1 ten × 80 = ___ hundreds, 1 ten × ____ = 600, and 3 tens × 1 ten = ____ hundreds.

Note: Watch for students who say 3 tens × 4 tens is 12 tens rather than 12 hundreds.

**Application Problem (6 minutes)**

The post office sold 204,789 stamps last week and 93,061 stamps this week. About how many more stamps did the post office sell last week than this week? Explain how you got your answer.

Note: This Application Problem builds on the concept of the previous lesson (rounding multi-digit numbers to any place value) and creates a bridge to this lesson’s concept (rounding using real world applications).

**Concept Development (30 minutes)**

Materials: (S) Personal white board

**Problem 1: Round one number to multiple units.**

T: Write 935,292 ≈ ___. Read it to your partner and round to the nearest hundred thousand.

S: 900,000.

T: It is 900,000 when we round to the largest unit. What’s the next largest unit we might round to?

S: Ten thousands.

T: Round to the ten thousands. Then round to the thousands.

S: 940,000. 935,000.

T: What changes about the numbers when rounding to smaller and smaller units? Discuss with your partner.

S: When you round to the largest unit, every other place will have a zero. → Rounding to the largest unit gives you the easiest number to add, subtract, multiply, or divide. → As you round to smaller units, there are not as many zeros in the number. → Rounding to smaller units gives an estimate that is closer to the actual value of the number.
Lesson 10: Use place value understanding to round multi-digit numbers to any place value using real world applications.

Date: 5/26/14

NOTES ON MULTIPLE MEANS OF ENGAGEMENT:

Challenge above grade level students to think of at least two situations similar to that of Problem 3, where choosing the unit to which to round is important to the outcome of the problem. Have them share and discuss.

NOTES ON MULTIPLE MEANS OF REPRESENTATION:

For English language learners, define unfamiliar words and experiences, such as the White House. Give an alternative example using a more familiar tourist attraction, perhaps from their cultural experience.

Problem 2: Determine the best estimate to solve a word problem.

Display: In the year 2012, there were 935,292 visitors to the White House.

T: Let’s read together. Assume that each visitor is given a White House map. Now, use this information to predict the number of White House maps needed for visitors in 2013. Discuss with your partner how you made your estimate.

S: I predict 940,000 maps are needed. I rounded to the nearest ten thousands place in order to make sure every visitor has a map. It is better to have more maps than not enough maps. I predict more people may visit the White House in 2013, so I rounded to the nearest ten thousand — 940,000 — the only estimate that is greater than the actual number.

Display: In the year 2011, there were 998,250 visitors to the White House.

T: Discuss with your partner how this data may change your estimate.

S: This data shows the number of visitors decreased from 2011 to 2012. It may be wiser to predict 935,000 or 900,000 maps needed for 2013.

T: How can you determine the best estimate in a situation?

S: I can notice patterns or find data that might inform my estimate.

Problem 3: Choose a unit of rounding to solve a word problem.

Display: 2,837 students attend Lincoln Elementary school.

T: Discuss with your partner how you would estimate the number of chairs needed in the school.

S: I would round to the nearest thousand for an estimate of 3,000 chairs needed. If I rounded to the nearest hundred — 2,800 — some students may not have a seat.

T: Compare the effect of rounding to the largest unit in this problem and Problem 2.

S: In Problem 2, rounding to the largest unit resulted in a number less than the actual number. By contrast, when we rounded to the largest unit in Problem 3, our estimate was greater.

T: What can you conclude?

S: Rounding to the largest unit may not always be a reliable estimate. I will choose the unit based on the situation and what is most reasonable.
Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (12 minutes)

Lesson Objective: Use place value understanding to round multi-digit numbers to any place value using real world applications.

Invite students to review their solutions for the Problem Set and the totality of the lesson experience. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set.

You may choose to use any combination of the questions below to lead the discussion.

- In Problem 3, why didn’t rounding to the nearest hundred work? Would rounding to the nearest thousand have worked better? What does this show you about rounding?
- When estimating, how do you choose to which unit you will round? Would it have been more difficult to solve Problem 5 if you rounded both numbers to the hundreds? Why or why not?
- In Problem 5, how does rounding one number up and one number down affect the answer? The plane can actually make between 8 and 9 trips. How might you revise the units to which you round to estimate this answer more accurately?
- Notice, in Problem 5, that 65,000 rounded to 70,000 and that 7,460 rounded to 7,000. What is the relationship between 7,000 and 70,000? How does this relationship make it easier to determine the
Lesson 10: Use place value understanding to round multi-digit numbers to any place value using real world applications.

Date: 5/26/14

number of trips?

- In Problem 1, how do your estimates compare?
- How do you choose a best estimate? What is the advantage of rounding to smaller and larger units?
- Why might you round up, even though the numbers tell you to round down?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
## Lesson 10: Use place value understanding to round multi-digit numbers to any place value using real world applications.

**Date:** 5/26/14

### Round to the nearest ten thousand.

Lesson 10 Problem Set

Lesson 10: Use place value understanding to round multi-digit numbers to any place value using real world applications.

Date: 5/26/14

1. Round 543,982 to the nearest
   a. thousand: ____________________________
   b. ten thousand: ____________________________
   c. hundred thousand: ____________________________

2. Complete each statement by rounding the number to the given place value.
   a. 2,841 rounded to the nearest hundred is ____________________________.
   b. 32,851 rounded to the nearest hundred is ____________________________.
   c. 132,891 rounded to the nearest hundred is ____________________________.
   d. 6,299 rounded to the nearest thousand is ____________________________.
   e. 36,599 rounded to the nearest thousand is ____________________________.
   f. 100,699 rounded to the nearest thousand is ____________________________.
   g. 40,984 rounded to the nearest ten thousand is ____________________________.
   h. 54,984 rounded to the nearest ten thousand is ____________________________.
   i. 997,010 rounded to the nearest ten thousand is ____________________________.
   j. 360,034 rounded to the nearest hundred thousand is ____________________________.
   k. 436,709 rounded to the nearest hundred thousand is ____________________________.
   l. 852,442 rounded to the nearest hundred thousand is ____________________________.
3. Empire Elementary School needs to purchase water bottles for field day. There are 2,142 students. Principal Vadar rounded to the nearest hundred to estimate how many water bottles to order. Will there be enough water bottles for everyone? Explain.

4. Opening day at the New York State Fair in 2012 had an attendance of 46,753. Decide which place value to round 46,753 to if you were writing a newspaper article. Round the number and explain why it is an appropriate unit to round the attendance to.

5. A jet airplane holds about 65,000 gallons of gas. It uses about 7,460 gallons when flying between New York City and Los Angeles. Round each number to the largest place value. Then find about how many trips the plane can take between cities before running out of fuel.
Lesson 10 Exit Ticket

Name ___________________________ Date __________________

1. There are 598,500 Apple employees in the United States.
   a. Round the number of employees to the given place value.

   thousand: ________________

   ten thousand: ________________

   hundred thousand: ________________

   b. Explain why two of your answers are the same.

2. A company developed a student survey so that students could share their thoughts about school. In 2011, 78,234 students across the United States were administered the survey. In 2012, the company planned to administer the survey to 10 times as many students as were surveyed in 2011. About how many surveys should the company have printed in 2012? Explain how you found your answer.
Lesson 10 Homework

Name ________________________________ Date __________________

1. Round 845,001 to the nearest
   a. thousand: _______________________
   b. ten thousand: ___________________
   c. hundred thousand: _________________

2. Complete each statement by rounding the number to the given place value.
   a. 783 rounded to the nearest hundred is ________________________.
   b. 12,781 rounded to the nearest hundred is ________________________.
   c. 951,194 rounded to the nearest hundred is ________________________.
   d. 1,258 rounded to the nearest thousand is ________________________.
   e. 65,124 rounded to the nearest thousand is ________________________.
   f. 99,451 rounded to the nearest thousand is ________________________.
   g. 60,488 rounded to the nearest ten thousand is ________________________.
   h. 80,801 rounded to the nearest ten thousand is ________________________.
   i. 897,100 rounded to the nearest ten thousand is ________________________.
   j. 880,005 rounded to the nearest hundred thousand is ________________________.
   k. 545,999 rounded to the nearest hundred thousand is ________________________.
   l. 689,114 rounded to the nearest hundred thousand is ________________________.
3. Solve the following problems using pictures, numbers, or words.

   a. In the 2011 New York City Marathon, 29,867 men finished the race and 16,928 women finished the race. Each finisher was given a t-shirt. About how many men’s shirts were given away? About how many women’s shirts were given away? Explain how you found your answers.

   b. In the 2010 New York City Marathon, 42,429 people finished the race and received a medal. Before the race, the medals had to be ordered. If you were the person in charge of ordering the medals and estimated how many to order by rounding, would you have ordered enough medals? Explain your thinking.

   c. In 2010, 28,357 of the finishers were men and 14,072 of the finishers were women. About how many more men finished the race than women? To determine your answer, did you round to the nearest ten thousand or thousand? Explain.
Topic D
Multi-Digit Whole Number Addition

Focus Standard: 4.OA.3
- Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

4.NBT.4
- Fluently add and subtract multi-digit whole numbers using the standard algorithm.

Instructional Days: 2
Coherence -Links from: G3–M2 -Place Value and Problem Solving with Units of Measure
- Links to: G5–M1 -Place Value and Decimal Fractions

Moving away from special strategies for addition, students develop fluency with the standard addition algorithm (4.NBT.4). Students compose larger units to add like base ten units, such as composing 10 hundreds to make 1 thousand and working across the numbers unit by unit (ones with ones, thousands with thousands). Recording of regrouping occurs on the line under the addends as shown to the right. For example, in the ones column, students do not record the 0 in the ones column and the 1 above the tens column, instead students record 10, writing the 1 under the tens column and then a 0 in the ones column. They practice and apply the algorithm within the context of word problems and assess the reasonableness of their answers using rounding (4.OA.3).

When using tape diagrams to model word problems, students use a variable to represent the unknown quantity.

A Teaching Sequence Towards Mastery of Multi-Digit Whole Number Addition

Objective 1: Use place value understanding to fluently add multi-digit whole numbers using the standard addition algorithm, and apply the algorithm to solve word problems using tape diagrams. (Lesson 11)

Objective 2: Solve multi-step word problems using the standard addition algorithm modeled with tape diagrams, and assess the reasonableness of answers using rounding. (Lesson 12)
Lesson 11

Objective: Use place value understanding to fluently add multi-digit whole numbers using the standard addition algorithm, and apply the algorithm to solve word problems using tape diagrams.

Suggested Lesson Structure

- Fluency Practice (12 minutes)
- Application Problem (7 minutes)
- Concept Development (30 minutes)
- Student Debrief (11 minutes)
- Total Time (60 minutes)

Fluency Practice (12 minutes)

- Round to Different Place Values 4.NBT.3 (5 minutes)
- Multiply by 10 3.NBT.3 (4 minutes)
- Add Common Units 3.NBT.2 (3 minutes)

Round to Different Place Values (5 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews rounding skills that are building towards mastery.

T: (Write 3,941.) Say the number. We are going to round this number to the nearest thousand.
T: How many thousands are in 3,941?
S: 3 thousands.
T: (Label the lower endpoint of a vertical number line with 3,000.) And 1 more thousand is?
S: 4 thousands.
T: (Mark the upper endpoint with 4,000.) Draw the same number line.
S: (Draw number line.)
T: What’s halfway between 3,000 and 4,000?
S: 3,500.
T: Label 3,500 on your number line as I do the same. Now, label 3,941 on your number line.
S: (Label 3,5000 and 3,941.)
T: Is 3,941 nearer to 3,000 or 4,000?
Lesson 11: Use place value understanding to fluently add multi-digit whole numbers using the standard addition algorithm, and apply the algorithm to solve word problems using tape diagrams.

T: (Write 3,941 ≈ ____) Write your answer on your personal white board.
S: (Write 3,941 ≈ 4,000.)

Repeat process for 3,941 rounded to the nearest hundred, 74,621 rounded to the nearest ten thousand and nearest thousand, and 681,904 rounded to the nearest hundred thousand, nearest ten thousand, and nearest thousand.

Multiply by 10 (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity deepens student understanding of base ten units.

T: (Write 10 × ____ = 100.) Say the multiplication sentence.
S: 10 × 10 = 100.
T: (Write 10 × 1 ten = ____.) On your personal white boards, fill in the blank.
S: (Write 10 × 1 ten = 10 tens.)
T: (Write 10 tens = ____ hundred.) On your personal white boards, fill in the blank.
T: (Write ____ ten × ____ ten = 1 hundred.) On your boards, fill in the blanks.
S: (Write 1 ten × 1 ten = 1 hundred.)

Repeat process for the following possible sequence: 1 ten × 60 = ____, 1 ten × 30 = ____ hundreds, 1 ten × ____ = 900, and 7 tens × 1 ten = ____ hundreds.

Note: Watch for students who say 3 tens × 4 tens is 12 tens rather than 12 hundreds.

Add Common Units (3 minutes)

Materials: (S) Personal white board

Note: This mental math fluency activity prepares students for understanding the importance of the algorithm.

T: (Project 303.) Say the number in unit form.
S: 3 hundreds 3 ones.
T: (Write 303 + 202 = ____.) Say the addition sentence and answer in unit form.
S: 3 hundreds 3 ones + 2 hundreds 2 ones = 5 hundreds 5 ones.
T: Write the addition sentence on your personal white boards.
S: (Write 303 + 202 = 505.)

Repeat process and sequence for 505 + 404; 5,005 + 5,004; 7,007 + 4,004; and 8,008 + 5,005.
Lesson 11:

Use place value understanding to fluently add multi-digit whole numbers using the standard addition algorithm, and apply the algorithm to solve word problems using tape diagrams.

Date: 5/26/14

Application Problem (7 minutes)

Meredith kept track of the calories she consumed for 3 weeks. The first week, she consumed 12,490 calories, the second week 14,295 calories, and the third week 11,116 calories. About how many calories did Meredith consume altogether? Which of these estimates will produce a more accurate answer: rounding to the nearest thousand or rounding to the nearest ten thousand? Explain.

Note: This problem reviews rounding from Lesson 10 and can be used as an extension after the Debrief to support the objective of this lesson.

Concept Development (30 minutes)

Materials: (T) Millions place value chart (Template) (S) Personal white board, millions place value chart (Template)

Note: Using the template provided within this lesson in upcoming lessons provides students with space to draw a tape diagram and record an addition or a subtraction problem below the place value chart. Alternatively, the unlabeled millions place value chart template from Lesson 2 could be used along with paper and pencil.

Problem 1: Add, renaming once, using place value disks in a place value chart.

T: (Project vertically: 3,134 + 2,493.) Say this problem with me.
S: Three thousand, one hundred thirty-four plus two thousand, four hundred ninety-three.
T: Draw a tape diagram to represent this problem. What are the two parts that make up the whole?
S: 3,134 and 2,493.
T: Record that in the tape diagram.
T: What is the unknown?
S: In this case, the unknown is the whole.
Lesson 11: Use place value understanding to fluently add multi-digit whole numbers using the standard addition algorithm, and apply the algorithm to solve word problems using tape diagrams.

T: Show the whole above the tape diagram using a bracket and label the unknown quantity with an a. When a letter represents an unknown number, we call that letter a variable.

T: (Draw place value disks on the place value chart to represent the first part, 3,134.) Now, it’s your turn. When you are done, add 2,493 by drawing more disks on your place value chart.

T: (Point to the problem.) 4 ones plus 3 ones equals?
S: 7 ones. (Count 7 ones in the chart, and record 7 ones in the problem.)

T: (Point to the problem.) 3 tens plus 9 tens equals?
S: 12 tens. (Count 12 tens in the chart.)

T: We can bundle 10 tens as 1 hundred. (Circle 10 ten disks, draw an arrow to the hundreds place, and draw the 1 hundred disk to show the regrouping.)

T: We can represent this in writing. (Write 12 tens as 1 hundred, crossing the line, and 2 tens in the tens column so that you are writing 12 and not 2 and 1 as separate numbers. Refer to the visual above.)

T: (Point to the problem.) 1 hundred plus 4 hundreds plus 1 hundred equals?
S: 6 hundreds. (Count 6 hundreds in the chart, and record 6 hundreds in the problem.)

T: (Point to the problem.) 3 thousands plus 2 thousands equals?
S: 5 thousands. (Count 5 thousands in the chart, and record 5 thousands in the problem.)

T: Say the equation with me: 3,134 plus 2,493 equals 5,627. Label the whole in the tape diagram, above the bracket, with a = 5,627.

Problem 2: Add, renaming in multiple units, using the standard algorithm and the place value chart.

T: (Project vertically: 40,762 + 30,473.) With your partner, draw a tape diagram to model this problem, labeling the two known parts and the unknown whole, using the variable B to represent the whole. (Circulate and assist students.)

T: With your partner, write the problem and draw disks for the first addend in your chart. Then, draw disks for the second addend.

T: (Point to the problem.) 2 ones plus 3 ones equals?
S: 5 ones. (Count the disks to confirm 5 ones, and write 5 in the ones column.)

T: 6 tens plus 7 tens equals?
Use place value understanding to fluently add multi-digit whole numbers using the standard addition algorithm, and apply the algorithm to solve word problems using tape diagrams.

Problem 3: Add, renaming multiple units using the standard algorithm.

T: (Project: 207,426 + 128,744.) Draw a tape diagram to model this problem. Record the numbers on your personal white board.

T: With your partner, add units right to left, regrouping when necessary using the standard algorithm.

S: 207,426 + 128,744 = 336,170.

Problem 4: Solve a one-step word problem using the standard algorithm modeled with a tape diagram.

The Lane family took a road trip. During the first week, they drove 907 miles. The second week they drove the same amount as the first week plus an additional 297 miles. How many miles did they drive during the second week?

T: What information do we know?

S: We know they drove 907 miles the first week.

We also know they drove 297 miles more during the second week than the first week.

T: What is the unknown information?

S: We don’t know the total miles they drove in the second week.

T: Draw a tape diagram to represent the amount of miles in the first week, 907 miles. Since the Lane family drove an additional 297 miles in the second week, extend the bar for 297 more miles. What does the tape diagram represent?
Lesson 11: Use place value understanding to fluently add multi-digit whole numbers using the standard addition algorithm, and apply the algorithm to solve word problems using tape diagrams.

Date: 5/26/14

Student Debrief (11 minutes)

Lesson Objective: Use place value understanding to fluently add multi-digit whole numbers using the standard addition algorithm, and apply the algorithm to solve word problems using tape diagrams.

Invite students to review their solutions for the Problem Set and the totality of the lesson experience. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief.

Guide students in a conversation to debrief the Problem Set.

You may choose to use any combination of the questions below to lead the discussion.

- When we are writing a sentence to express our answer, what part of the original problem helps us to tell our answer using the correct words and context?
Lesson 11: Use place value understanding to fluently add multi-digit whole numbers using the standard addition algorithm, and apply the algorithm to solve word problems using tape diagrams.

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Lesson 11 Problem Set

1. Solve the addition problems below using the standard algorithm.

   a. $6,311 + 268$
   b. $6,311 + 1,268$
   c. $6,314 + 1,268$

   d. $6,314 + 2,493$
   e. $8,314 + 2,493$
   f. $12,378 + 5,463$

   g. $52,098 + 6,048$
   h. $34,698 + 7,1840$
   i. $544,811 + 356,445$

   j. $527 + 275 + 752$
   k. $38,193 + 6,376 + 241,457$
Draw a tape diagram to represent each problem. Use numbers to solve, and write your answer as a statement.

2. In September, Liberty Elementary School collected 32,537 cans for a fundraiser. In October, they collected 207,492 cans. How many cans were collected during September and October?

3. A baseball stadium sold some burgers. 2,806 were cheeseburgers. 1,679 burgers didn’t have cheese. How many burgers did they sell in all?

4. On Saturday night, 23,748 people attended the concert. On Sunday, 7,570 more people attended the concert than on Saturday. How many people attended the concert on Sunday?
1. Solve the addition problems below using the standard algorithm.

   a. 2 3, 6 0 7
    + 2, 3 0 7
   b. 3, 9 4 8
    + 2 7 8
   c. 5,983 + 2,097

2. The office supply closet had 25,473 large paperclips, 13,648 medium paperclips, and 15,306 small paperclips. How many paperclips were in the closet?
1. Solve the addition problems below using the standard algorithm.

   a. $7,909 + 1,044$

   b. $27,909 + 9,740$

   c. $827,909 + 42,989$

   d. $289,205 + 11,845$

   e. $547,982 + 114,849$

   f. $258,983 + 121,897$

   g. $83,906 + 35,808$

   h. $289,999 + 91,849$

   i. $754,900 + 245,100$
Lesson 11 Homework

Draw a tape diagram to represent each problem. Use numbers to solve, and write your answer as a statement.

2. At the zoo, Brooke learned that one of the rhinos weighs 4,897 pounds, one of the giraffes weighs 2,667 pounds, one of the African elephants weighs 12,456 pounds, and one of the Komodo dragons weighs 123 pounds.
   
a. What is the combined weight of the zoo’s African elephant and the giraffe?

b. What is the combined weight of the zoo’s African elephant and the rhino?

c. What is the combined weight of the zoo’s African elephant, the rhino, and the giraffe?

d. What is the combined weight of the zoo’s Komodo dragon and the rhino?
Lesson 11: Use place value understanding to fluently add multi-digit whole numbers using the standard addition algorithm, and apply the algorithm to solve word problems using tape diagrams.

Lesson 12

Objective: Solve multi-step word problems using the standard addition algorithm modeled with tape diagrams, and assess the reasonableness of answers using rounding.

Suggested Lesson Structure

- Fluency Practice (12 minutes)
- Application Problem (5 minutes)
- Concept Development (34 minutes)
- Student Debrief (9 minutes)
- Total Time (60 minutes)

Fluency Practice (12 minutes)

- Round to Different Place Values 4.NBT.3 (6 minutes)
- Find the Sum 4.NBT.4 (6 minutes)

Round to Different Place Values (6 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews rounding skills that are building towards mastery.

T: (Project 726,354.) Say the number.
S: Seven hundred twenty-six thousand, three hundred fifty-four.
T: What digit is in the hundred thousands place?
S: 7.
T: What’s the value of the digit 7?
S: 700,000.
T: On your personal white boards, round the number to the nearest hundred thousand.
S: (Write 726,354 ≈ 700,000.)

Repeat process, rounding 726,354 to the nearest ten thousand, thousand, hundred, and ten. Follow the same process and sequence for 496,517.
Lesson 12: Solve multi-step word problems using the standard addition algorithm modeled with tape diagrams, and assess the reasonableness of answers using rounding.

Date: 5/26/14

Find the Sum (6 minutes)

Materials: (S) Personal white board

Note: This fluency activity prepares students for understanding the importance of the algorithm.

T: (Write 417 + 232 = ____.) Solve by writing horizontally or vertically.
S: (Write 417 + 232 = 649.)

Repeat process and sequence for 7,073 + 2,312; 13,705 + 4,412; 3,949 + 451; 538 + 385 + 853; and 23,944 + 6,056 + 159,368.

Application Problem (5 minutes)

The basketball team raised a total of $154,694 in September and $29,987 more in October than in September. How much money did they raise in October? Draw a tape diagram and write your answer in a complete sentence.

Note: This is a comparative word problem that reviews the addition algorithm practiced in the last lesson.

Concept Development (34 minutes)

Materials: (S) Personal white board

Problem 1: Solve a multi-step word problem using a tape diagram.

The city flower shop sold 14,594 pink roses on Valentine’s Day. They sold 7,857 more red roses than pink roses. How many pink and red roses did the city flower shop sell altogether on Valentine’s Day? Use a tape diagram to show your work.
Lesson 12: Solve multi-step word problems using the standard addition algorithm modeled with tape diagrams, and assess the reasonableness of answers using rounding.

**Problem 1:**

Read the problem with me. What information do we know?

S: We know they sold 14,594 pink roses.

T: To model this, let’s draw one tape to represent the pink roses. Do we know how many red roses were sold?

S: No, but we know that there were 7,857 more red roses sold than pink roses.

T: A second tape can represent the number of red roses. (Model on the tape diagram.)

T: What is the problem asking us to find?

S: The total number of roses.

T: We can draw a bracket to the side of both tapes. Let’s label it $R$ for pink and red roses.

T: First, solve to find how many red roses were sold.

S: (Solve $14,594 + 7,857 = 22,451$.)

T: What does the bottom tape represent?

S: The bottom tape represents the number of red roses, 22,451.

T: (Bracket and label 22,451 to show the total number of red roses.) Now, we need to find the total number of roses sold. How do we solve for $R$?

S: Add the totals for both tapes together. $14,594 + 22,451 = R$.

T: Solve with me. What does $R$ equal?

S: $R$ equals 37,045.

T: (Write $R = 37,045$.) Let’s write a statement of the answer.

S: (Write: The city flower shop sold 37,045 pink and red roses on Valentine’s Day.)

**Problem 2:** Solve a two-step word problem using a tape diagram, and assess the reasonableness of the answer.

On Saturday, 32,736 more bus tickets were sold than on Sunday. On Sunday, only 17,295 tickets were sold. How many people bought bus tickets over the weekend? Use a tape diagram to show your work.

T: Tell your partner what information we know.

S: We know how many people bought bus tickets on Sunday, 17,295. We also know how many more people bought tickets on Saturday. But we don’t know the total number of people that bought tickets on Saturday.
T: Let’s draw a tape for Sunday’s ticket sales and label it. How can we represent Saturday’s ticket sales?

S: Draw a tape the same length as Sunday’s and extend it further for 32,736 more tickets.

T: What does the problem ask us to solve for?

S: The number of people that bought tickets over the weekend.

T: With your partner, finish drawing a tape diagram to model this problem. Use B to represent the total number of tickets bought over the weekend.

T: Before we solve, estimate to get a general sense of what our answer will be. Round each number to the nearest ten thousand.

S: (Write 20,000 + 20,000 + 30,000 = 70,000.) About 70,000 tickets were sold over the weekend.

T: Now, solve with your partner to find the actual number of tickets sold over the weekend.

S: (Solve.)

S: B equals 67,326.

T: (Write B = 67,326.)

T: Now, let’s look back at the estimate we got earlier and compare with our actual answer. Is 67,326 close to 70,000?

S: Yes, 67,326 rounded to the nearest ten thousand is 70,000.

T: Our answer is reasonable.

T: Write a statement of the answer.

S: (Write: There were 67,326 people who bought bus tickets over the weekend.)

Problem 3: Solve a multi-step word problem using a tape diagram, and assess reasonableness.

Last year, Big Bill’s Department Store sold many pairs of footwear. 118,214 pairs of boots were sold, 37,092 more pairs of sandals than pairs of boots were sold, and 124,417 more pairs of sneakers than pairs of boots were sold. How many pairs of footwear were sold last year?

T: Discuss with your partner the information we have and the unknown information we want to find.

S: (Discuss.)
Lesson 12:
Solve multi-step word problems using the standard addition algorithm modeled with tape diagrams, and assess the reasonableness of answers using rounding.

Lesson Objective: Solve multi-step word problems using the standard addition algorithm modeled with tape diagrams, and assess the reasonableness of answers using rounding.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.
Lesson 12: Solve multi-step word problems using the standard addition algorithm modeled with tape diagrams, and assess the reasonableness of answers using rounding.

You may choose to use any combination of the questions below to lead the discussion.

- Explain why we should test to see if our answers are reasonable. (Show an example of one of the above Concept Development problems solved incorrectly to show how checking the reasonableness of an answer is important.)
- When might you need to use an estimate in real life?
- Let’s check the reasonableness of our answer in the Application Problem.
  - Round to the nearest ten thousand.
  - Note that rounding to the ten thousands brings our estimate closer to the actual answer than if we were to round to the nearest hundred thousand.
  - Discuss the margin of error that occurs in estimating answers and how this relates to the place value to which you round.
- In Problem 1, how would your estimate be affected if you rounded all numbers to the nearest hundred?
- What are the next steps if your estimate is not near the actual answer? Consider the example we discussed earlier where the problem was solved incorrectly. Because we had estimated an answer, we knew that our solution was not reasonable.

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Estimate and then solve each problem. Model the problem with a tape diagram. Explain if your answer is reasonable.
1. For the bake sale, Connie baked 144 cookies. Esther baked 49 more cookies than Connie.
   a. About how many cookies did Connie and Esther bake? Estimate by rounding each number to the nearest ten before adding.
   b. Exactly how many cookies did Connie and Esther bake?
   c. Is your answer reasonable? Compare your estimate from (a) to your answer from (b). Write a sentence to explain your reasoning.
2. Raffle tickets were sold for a school fundraiser to parents, teachers, and students. 563 tickets were sold to teachers. 888 more tickets were sold to students than to teachers. 904 tickets were sold to parents.

   a. About how many tickets were sold to parents, teachers, and students? Round each number to the nearest hundred to find your estimate.

   b. Exactly how many tickets were sold to parents, teachers, and students?

   c. Assess the reasonableness of your answer in (b). Use your estimate from (a) to explain.

3. From 2010 to 2011, the population of Queens increased by 16,075. Brooklyn’s population increased by 11,870 more than the population increase of Queens.

   a. Estimate the total combined population increase of Queens and Brooklyn from 2010 to 2011. (Round the addends to estimate.)
b. Find the actual total combined population increase of Queens and Brooklyn from 2010 to 2011.

c. Assess the reasonableness of your answer in (b). Use your estimate from (a) to explain.

4. During National Recycling Month, Mr. Yardley’s class spent 4 weeks collecting empty cans to recycle.

<table>
<thead>
<tr>
<th>Week</th>
<th>Number of Cans Collected</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>10,827</td>
</tr>
<tr>
<td>2</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>10,522</td>
</tr>
<tr>
<td>4</td>
<td>20,011</td>
</tr>
</tbody>
</table>

a. During Week 2, the class collected 1,256 more cans than they did during Week 1.
   Find the total number of cans Mr. Yardley’s class collected in 4 weeks.

b. Assess the reasonableness of your answer in (a) by estimating the total number of cans collected.
In January, Scott earned $8,999. In February, he earned $2,387 more than in January. In March, Scott earned the same amount as in February. How much did Scott earn altogether during those three months? Is your answer reasonable? Explain.
Estimate and then solve each problem. Model the problem with a tape diagram. Explain if your answer is reasonable.

1. There were 3,905 more hits on the school’s website in January than February. February had 9,854 hits. How many hits did the school’s website have during both months?
   
   a. About how many hits did the website have during January and February?
   
   b. Exactly how many hits did the website have during January and February?
   
   c. Is your answer reasonable? Compare your estimate from (a) to your answer from (b). Write a sentence to explain your reasoning.

2. On Sunday, 77,098 fans attended a New York Jets game. The same day, 3,397 more fans attended a New York Giants game than attended the Jets game. Altogether, how many fans attended the games?
   
   a. What was the actual number of fans who attended the games?
   
   b. Is your answer reasonable? Round each number to the nearest thousand to find an estimate of how many fans attended the games.
3. Last year on Ted’s farm, his four cows produced the following number of liters of milk:

<table>
<thead>
<tr>
<th>Cow</th>
<th>Liters of Milk Produced</th>
</tr>
</thead>
<tbody>
<tr>
<td>Daisy</td>
<td>5,098</td>
</tr>
<tr>
<td>Betsy</td>
<td></td>
</tr>
<tr>
<td>Mary</td>
<td>9,980</td>
</tr>
<tr>
<td>Buttercup</td>
<td>7,087</td>
</tr>
</tbody>
</table>

a. Betsy produced 986 more liters of milk than Buttercup. How many liters of milk did all 4 cows produce?

b. Is your answer reasonable? Explain.
Topic E
Multi-Digit Whole Number Subtraction

4.OA.3, 4.NBT.4, 4.NBT.1, 4.NBT.2

Focus Standard: 4.OA.3
Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Instructional Days: 4

Coherence -Links from: G3–M2 Place Value and Problem Solving with Units of Measure
-Links to: G5–M1 Place Value and Decimal Fractions

Following the introduction of the standard algorithm for addition in Topic D, the standard algorithm for subtraction replaces special strategies for subtraction in Topic E. Moving slowly from smaller to larger minuends, students practice decomposing larger units into smaller units. First, only one decomposition is introduced, where one zero may appear in the minuend. As in Grades 2 and 3, students continue to decompose all necessary digits before performing the algorithm, allowing subtraction from left to right, or, as taught in the lessons, from right to left. Students use the algorithm to subtract numbers from 1 million allowing for multiple decompositions (4.NBT.4). The topic concludes with practicing the standard algorithm for subtraction in the context of two-step word problems where students have to assess the reasonableness of their answers by rounding (4.OA.3). When using tape diagrams to model word problems, students use a variable to represent the unknown quantity.
### Objective 1:
Use place value understanding to decompose to smaller units once using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams. (Lesson 13)

### Objective 2:
Use place value understanding to decompose to smaller units up to 3 times using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams. (Lesson 14)

### Objective 3:
Use place value understanding to fluently decompose to smaller units multiple times in any place using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams. (Lesson 15)

### Objective 4:
Solve two-step word problems using the standard subtraction algorithm fluently modeled with tape diagrams, and assess the reasonableness of answers using rounding. (Lesson 16)
Lesson 13

Objective: Use place value understanding to decompose to smaller units once using the standard subtraction algorithm and apply the algorithm to solve word problems using tape diagrams.

Suggested Lesson Structure

- Fluency Practice (12 minutes)
- Application Problem (5 minutes)
- Concept Development (35 minutes)
- Student Debrief (8 minutes)
- Total Time (60 minutes)

Fluency Practice (12 minutes)

- Find the Sum 4.NBT.4 (6 minutes)
- Subtract Common Units 4.NBT.3 (6 minutes)

Find the Sum (6 minutes)

Materials: (S) Personal white board

Note: This math fluency activity prepares students for understanding the importance of the addition algorithm.

T: (Write 316 + 473 = ____.) Solve by writing an addition sentence horizontally or vertically.
S: (Write 316 + 473 = 789.)

Repeat process and sequence for 6,065 + 3,731; 13,806 + 4,393; 5,928 + 124; and 629 + 296 + 962.

Subtract Common Units (6 minutes)

Materials: (S) Personal white board

Note: This mental math fluency activity prepares students for understanding the importance of the subtraction algorithm.

T: (Project 707.) Say the number in unit form.
S: 7 hundreds 7 ones.
T: (Write 707 − 202 = ____.) Say the subtraction sentence and answer in unit form.
Lesson 13: Use place value understanding to decompose to smaller units once using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Date: 5/26/14

S: 7 hundreds 7 ones – 2 hundreds 2 ones = 5 hundreds 5 ones.
T: Write the subtraction sentence on your personal white boards.
S: (Write 707 – 202 = 505.)

Repeat process and sequence for 909 – 404; 9,009 – 5,005; 11,011 – 4,004; and 13,013 – 8,008.

Application Problem (5 minutes)

Jennifer texted 5,849 times in January. In February, she texted 1,263 more times than in January. What was the total number of texts that Jennifer sent in the two months combined? Explain how you know your answer is reasonable.

Note: This Application Problem reviews content from the previous lesson of a multi-step addition problem.

Concept Development (35 minutes)

Materials: (T) Millions place value chart (Lesson 11 Template) (S) Personal white board, millions place value chart template (Lesson 11 Template)

Problem 1: Use a place value chart and place value disks to model subtracting alongside the algorithm, regrouping 1 hundred into 10 tens.

Display 4,259 – 2,171 vertically on the board.

T: Say this problem with me. (Read problem together.)
T: Watch as I draw a tape diagram to represent this problem. What is the whole?
S: 4,259.
T: We record that above the tape as the whole and record the known part of 2,171 under the tape. It’s your turn to draw a tape diagram. Mark the unknown part of the diagram with the variable A.
T: Model the whole, 4,259, using place value disks on your place value chart.
T: Do we model the part we are subtracting?
S: No, just the whole.
Lesson 13: Use place value understanding to decompose to smaller units once using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Date: 5/26/14

T: First, let’s determine if we are ready to subtract. We look across the top number, from right to left, to see if there are enough units in each column. Let’s look at the ones column. Are there enough ones in the top number to subtract the ones in the bottom number? (Point to the 9 and the 1 in the problem.)
S: Yes, 9 is greater than 1.
T: That means we are ready to subtract in the ones column. Let’s look at the tens column. Are there enough tens in the top number to subtract the tens in the bottom number?
S: No, 5 is less than 7.
T: (Show regrouping on the place value chart.) We ungroup or unbundle 1 unit from the hundreds to make 10 tens. I now have 1 hundred and 15 tens. Let’s rename and represent the change in writing using the algorithm. (Cross out the hundreds and tens to rename them in the problem.)
T: Show the change with your disks. (Cross off 1 hundred and change it for 10 tens as shown below.)

T: Are there enough hundreds in the top number to subtract the hundreds in the bottom number?
S: Yes, 1 is equal to 1.
T: Are there enough thousands in the top number to subtract the thousands in the bottom number?
S: Yes, 4 is greater than 2.
T: Are we ready to subtract?
S: Yes, we are ready to subtract!
T: (Point to the problem.) 9 ones minus 1 one?
S: 8 ones.
T: (Cross off 1 disk; write an 8 in the problem.)
T: 15 tens minus 7 tens?
S: 8 tens.
T: (Cross off 7 disks; write an 8 in the problem.)
Continue subtracting through the hundreds and thousands.
T: Say the number sentence.
S: 4,259 – 2,171 = 2,088.
T: The value of the A in our tape diagram is 2,088. We write A = 2,088 below the tape diagram. What can be added to 2,171 to result in the sum of 4,259?
S: 2,088.
Repeat the process for 6,314 – 3,133.
Problem 2: Regroup 1 thousand into 10 hundreds using the subtraction algorithm.

Display 23,422 – 11,510 vertically on the board.

T: With your partner, read this problem and draw a tape diagram. Label the whole, the known part, and use the variable B for the unknown part.

T: Record the problem on your personal white board.

T: Look across the digits. Are we ready to subtract?

S: No!

T: Are there enough ones in the top number to subtract the ones in the bottom number? (Point to the 2 and the 0.)

S: Yes, 2 is greater than 0.

T: Are there enough tens in the top number to subtract the tens in the bottom number?

S: Yes, 2 is greater than 1.

T: Are there enough hundreds in the top number to subtract the hundreds in the bottom number?

S: No, 4 is less than 5.

T: Tell your partner how to make enough hundreds to subtract.

S: I unbundle 1 thousand to make 10 hundreds. I now have 2 thousands and 14 hundreds. \(\Rightarrow\) I change 1 thousand for 10 hundreds. \(\Rightarrow\) I rename 34 hundreds as 20 hundreds and 14 hundreds.

T: Watch as I record that. Now it’s your turn.

Repeat questioning for the thousands and ten thousands columns.

T: Are we ready to subtract?

S: Yes, we’re ready to subtract!

T: 2 ones minus 0 ones?

S: 2 ones. (Record 2 in the ones column.)

Continue subtracting across the number from right to left, always naming the units.

T: Tell your partner what must be added to 11,510 to result in the sum of 23,422.

T: How do we check a subtraction problem?

S: We can add the difference to the part we knew at first to see if the sum we get equals the whole.

T: Please add 11,912 and 11,510. What sum do you get?

S: 23,422, so our answer to the subtraction problem is correct.

T: Label your tape diagram as \(B = 11,912\).

Repeat for 29,014 – 7,503.
Problem 3: Solve a subtraction word problem, regrouping 1 ten thousand into 10 thousands.

The paper mill produced 73,658 boxes of paper. 8,052 boxes have been sold. How many boxes remain?

T: Draw a tape diagram to represent the boxes of paper produced and sold. I'll use the letter P to represent the boxes of paper remaining. Record the subtraction problem. Check to see that you lined up all units.

T: Am I ready to subtract?
S: No!
T: Work with your partner, asking if there are enough units in each column to subtract. Regroup when needed. Then ask, “Am I ready to subtract?” before you begin subtracting. Use the standard algorithm. (Students work.)

S: 73,658 – 8,052 = 65,606.
T: The value of P is 65,606. In a statement, tell your partner how many boxes remain.
S: 65,606 boxes remain.
T: To check and see if your answer is correct, add the two values of the tape, 8,052 and your answer of 65,606, to see if the sum is the value of the tape, 73,658.
S: (Add to find that the sum matches the value of the tape.)

Repeat with the following: The library has 50,819 books. 4,506 are checked out. How many books remain in the library?
**Problem Set (10 minutes)**

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

**Student Debrief (8 minutes)**

**Lesson Objective:** Use place value understanding to decompose to smaller units once using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

You may choose to use any combination of the questions below to lead the discussion.

- Compare your answers for Problem 1(a) and (b). How are your answers the same when the problems are different?
- Why do the days and months matter when solving Problem 3?
- Compare Problem 1(a) and (f). Does having a larger whole in 1(a) give an answer greater than or less than 1(f)?
- In Problem 4, you used subtraction, but I can say, “I can add $52,411$ to $15,614$ to result in the sum of $68,025$.” How can we add and subtract using the same problem?
- Why do we ask, “Are we ready to subtract?”
Lesson 13:

Use place value understanding to decompose to smaller units once using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Lesson 13: Use place value understanding to decompose to smaller units once using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Date: 5/26/14

Name ________________________________ Date ________________

1. Use the standard algorithm to solve the following subtraction problems.

   a. 7, 5 2 5
       − 3, 5 0 2
       ________

   b. 1 7, 5 2 5
       − 1 3, 5 0 2
       ________

   c. 6, 6 2 5
       − 4, 4 1 7
       ________

   d. 4, 6 2 5
       − 4 3 5
       ________

   e. 6, 5 0 0
       − 4 7 0
       ________

   f. 6, 0 2 5
       − 3, 5 0 2
       ________

   g. 2 3, 6 4 0
       − 1 4, 6 3 0
       ________

   h. 4 3 1, 9 2 5
       − 2 0 4, 8 1 5
       ________

   i. 2 1 9, 9 2 5
       − 1 2 1, 7 0 5
       ________

2. What number must be added to 13,875 to result in a sum of 25,884?

Draw a tape diagram to represent each problem. Use numbers to solve, and write your answer as a statement. Check your answers.
3. Artist Michelangelo was born on March 6, 1475. Author Mem Fox was born on March 6, 1946. How many years after Michelangelo was born was Mem born?

4. During the month of March, 68,025 pounds of king crab were caught. If 15,614 pounds were caught in the first week of March, how many pounds were caught in the rest of the month?

5. James bought a used car. After driving exactly 9,050 miles, the odometer read 118,064 miles. What was the odometer reading when James bought the car?
1. Use the standard algorithm to solve the following subtraction problems.

a. \[ 8,512 \]
   \[- 2,501 \]

b. \[ 18,042 \]
   \[- 4,122 \]

c. \[ 8,072 \]
   \[- 1,561 \]

2. What number must be added to 1,575 to result in a sum of 8,625?

Draw a tape diagram to represent the following problem. Use numbers to solve. Write your answer as a statement. Check your answer.
1. Use the standard algorithm to solve the following subtraction problems.

   a. 2,431 - 341 = 2,090
   b. 422,431 - 14,321 = 408,110
   c. 422,431 - 92,420 = 330,011
   d. 422,431 - 392,420 = 30,011
   e. 982,430 - 92,300 = 880,130
   f. 243,089 - 137,079 = 106,010
   g. 2,431 - 920 = 1,511
   h. 892,431 - 520,800 = 371,631

2. What number must be added to 14,056 to result in a sum of 38,773?
Draw a tape diagram to model each problem. Use numbers to solve, and write your answers as a statement. Check your answers.

3. An elementary school collected 1,705 bottles for a recycling program. A high school also collected some bottles. Both schools collected 3,627 bottles combined. How many bottles did the high school collect?

4. A computer shop sold $356,291 worth of computers and accessories. It sold $43,720 worth of accessories. How much did the computer shop sell in computers?

5. The population of a city is 538,381. In that population, 148,170 are children.
   a. How many adults live in the city?

   b. 186,101 of the adults are males. How many adults are female?
Lesson 14

Objective: Use place value understanding to decompose to smaller units up to three times using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Suggested Lesson Structure

- Fluency Practice (10 minutes)
- Application Problem (6 minutes)
- Concept Development (35 minutes)
- Student Debrief (9 minutes)
- Total Time (60 minutes)

Fluency Practice (10 minutes)

- Base Ten Thousand Units 4.NBT.2 (2 minutes)
- Find the Difference 4.NBT.4 (4 minutes)
- Convert Units 4.MD.1 (4 minutes)

Base Ten Thousand Units (2 minutes)

Materials: (S) Personal white board

Note: This fluency activity helps students work towards mastery of understanding base ten units.

T: (Project 8 ten thousands = _____.) Write the number in standard form.
S: 80,000.

Continue with the following possible sequence: 9 ten thousands, 10 ten thousands, 13 ten thousands, 19 ten thousands, 20 ten thousands, 30 ten thousands, 70 ten thousands, 71 ten thousands, 90 ten thousands, and 100 ten thousands.
Lesson 14: Use place value understanding to decompose to smaller units up to three times using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Find the Difference (4 minutes)

Materials: (S) Personal white board

Note: This math fluency activity prepares students for understanding the importance of the subtraction algorithm.

T: (Write 735 – 203 = ____.) Write a subtraction sentence horizontally or vertically.
S: (Write 735 – 203 = 532.)

Repeat process and sequence for 7,045 – 4,003; 845 – 18; 5,725 – 915; and 34,736 – 2,806.

Convert Units (4 minutes)

Note: Reviewing the relationship between meters and centimeters learned in Grade 3 helps prepare the students to solve problems with metric measurement and to understand metric measurement’s relationship to place value.

T: (Write 1 m = ___ cm.) How many centimeters are in a meter?
S: 1 m = 100 cm.

Repeat process for 2 m, 3 m, 8 m, 8 m 50 cm, 7 m 50 cm, and 4 m 25 cm.

T: (Write 100 cm = ___ m.) Say the answer.
S: 100 m = 1 m.
T: (Write 150 cm = ___ m ___ cm.) Say the answer.
S: 150 cm = 1 m 50 cm.

Repeat process for 250 cm, 350 cm, 950 cm, and 725 cm.

Application Problem (6 minutes)

In one year, the animal shelter bought 25,460 pounds of dog food. That amount was 10 times the amount of cat food purchased in the month of July. How much cat food was purchased in July?

Extension: If the cats ate 1,462 pounds of the cat food, how much cat food was left?

Note: This Application Problem incorporates prior knowledge of 10 times as many with the objective of decomposing to smaller units in order to subtract.
Lesson 14: Use place value understanding to decompose to smaller units up to three times using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Date: 5/26/14

Concept Development (35 minutes)

Materials: (S) Personal white board

Problem 1: Subtract, decomposing twice.

Write 22,397 – 3,745 vertically on the board.

T: Let’s read this subtraction problem together. Watch as I draw a tape diagram labeling the whole, the known part, and the unknown part using a variable, A. Now, it’s your turn.

T: Record the problem on your personal white board.

T: Look across the digits. Am I ready to subtract?

S: No!

T: We look across the top number to see if I have enough units in each column. Are there enough ones in the top number to subtract the ones in the bottom number?

S: Yes, 7 ones is greater than 5 ones.

T: Are there enough tens in the top number to subtract the tens in the bottom number?

S: Yes, 9 tens is greater than 4 tens.

T: Are there enough hundreds in the top number to subtract the hundreds in the bottom number?

S: No, 3 hundreds is less than 7 hundreds. We can unbundle 1 thousand as 10 hundreds to make 1 thousand and 13 hundreds. I can subtract the hundreds column now.

T: Watch as I record that. Now, it’s your turn to record the change.

T: Are there enough thousands in the top number to subtract the thousands in the bottom number?

S: No, 1 thousand is less than 3 thousands. We can unbundle 1 ten thousand to 10 thousands to make 1 ten thousand and 11 thousands. I can subtract in the thousands column now.

T: Watch as I record. Now, it’s your turn to record the change.

T: Are there enough ten thousands in the top number to subtract the ten thousands in the bottom number?

S: Yes.

T: Are we ready to subtract?

S: Yes, we’re ready to subtract!

T: 7 ones minus 5 ones?

S: 2 ones. (Record 2 in the ones column.)

Continue subtracting across the problem, always naming the units.

T: Say the equation with me.
Lesson 14:

Use place value understanding to decompose to smaller units up to three times using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Date: 5/26/14

S: 22,397 minus 3,745 equals 18,652.
T: Check your answer using addition.
S: Our answer is correct because 18,652 plus 3,745 equals 22,397.
T: What is the value of A in the tape diagram?
S: A equals 18,652.

Problem 2: Subtract, decomposing three times.

Write 210,290 – 45,720 vertically on the board.

T: With your partner, draw a tape diagram to represent the whole, the known part, and the unknown part.
T: Record the subtraction problem on your board.
T: Look across the digits. Are we ready to subtract?
S: No!
T: Look across the top number’s digits to see if we have enough units in each column. Are there enough ones in the top number to subtract the ones in the bottom number? (Point to the zeros in the ones column.)
S: Yes, 0 equals 0.
T: We are ready to subtract in the ones column. Are there enough tens in the top number to subtract the tens in the bottom number?
S: Yes, 9 is greater than 2.
T: We are ready to subtract in the tens column. Are there enough hundreds in the top number to subtract the hundreds in the bottom number?
S: No, 2 hundreds is less than 7 hundreds.
T: There are no thousands to unbundle, so we look to the ten thousands. We can unbundle 1 ten thousand to 10 thousands. Unbundle 10 thousands to make 9 thousands and 12 hundreds. Now we can subtract the hundreds column.

Repeat questioning for the thousands, ten thousands, and hundred thousands place, recording the renaming of units in the problem.

T: Are we ready to subtract?
S: Yes, we’re ready to subtract!
T: 0 ones minus 0 ones?
S: 0 ones.
T: 9 tens minus 2 tens?
S: 7 tens.

Have partners continue using the algorithm, reminding them to work right to left, always naming the units.

T: Read the equation to your partner and complete your tape diagram by labeling the variable.
S: 210,290 minus 45,720 is 164,570. (A = 164,570.)
Problem 3: Use the subtraction algorithm to solve a word problem, modeled with a tape diagram, decomposing units 3 times.

Bryce needed to purchase a large order of computer supplies for his company. He was allowed to spend $859,239 on computers. However, he ended up only spending $272,650. How much money was left?

T: Read the problem with me. Tell your partner the information we know.
S: We know he can spend $859,239, and we know he only spent $272,650.
T: Draw a tape diagram to represent the information in the problem. Label the whole, the known part, and the unknown part using a variable.
T: Tell me the problem we must solve, and write it on your board.
T: Say your answer as a statement.
S: $586,589 was left.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (9 minutes)

Lesson Objective: Use place value understanding to decompose to smaller units up to three times using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers.
Lesson 14: Use place value understanding to decompose to smaller units up to three times using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

With a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

You may choose to use any combination of the questions below to lead the discussion.

- What pattern did you notice between Problem 1(a) and (b)?
- Explain to your partner how to solve Problem 1(e). How can you make more ones when there aren’t any tens from which to regroup?
- How was setting up the problem to complete Problem 4 different from setting up the other problems? What did you need to be sure to do? Why?
- How is the complexity of this lesson different from the complexity of Lesson 13?
- In which column can you begin subtracting when you are ready to subtract? (Any column.)
- You are using a variable, or a letter, to represent the unknown in each tape diagram. Tell your partner how you determine what variable to use and how it helps you to solve the problem.
- How can you check a subtraction problem?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Lesson 14 Problem Set

Name ___________________________ Date ___________________

1. Use the standard algorithm to solve the following subtraction problems.

   a. \[2,460 - 1,370\]
   b. \[2,460 - 1,470\]
   c. \[97,684 - 49,700\]
   d. \[2,460 - 1,472\]
   e. \[124,306 - 31,117\]
   f. \[97,684 - 4,705\]
   g. \[1,240,006 - 121,117\]
   h. \[97,684 - 47,705\]
   i. \[124,060 - 31,117\]

Draw a tape diagram to represent each problem. Use numbers to solve, and write your answer as a statement. Check your answers.

2. There are 86,400 seconds in one day. If Mr. Liegel is at work for 28,800 seconds a day, how many seconds a day is he away from work?
3. A newspaper company delivered 240,900 newspapers before 6 a.m. on Sunday. There were a total of 525,600 newspapers to deliver. How many more newspapers needed to be delivered on Sunday?

4. A theater holds a total of 2,013 chairs. 197 chairs are in the VIP section. How many chairs are not in the VIP section?

5. Chuck’s mom spent $19,155 on a new car. She had $30,064 in her bank account. How much money does Chuck’s mom have after buying the car?
Use the standard algorithm to solve the following subtraction problems.

1. \[19,350 - 5,761\]

2. \[32,010 - 2,546\]

Draw a tape diagram to represent the following problem. Use numbers to solve, and write your answer as a statement. Check your answer.

3. A doughnut shop sold 1,232 doughnuts in one day. If they sold 876 doughnuts in the morning, how many doughnuts were sold during the rest of the day?
1. Use the standard algorithm to solve the following subtraction problems.

a. \[71,989 - 21,492\]

b. \[371,989 - 96,492\]

c. \[371,089 - 25,192\]

d. \[879,989 - 721,492\]

e. \[879,009 - 788,492\]

f. \[879,989 - 21,070\]

g. \[879,000 - 21,989\]

h. \[279,389 - 191,492\]

i. \[500,989 - 242,000\]
Draw a tape diagram to represent each problem. Use numbers to solve, and write your answer as a statement. Check your answers.

2. Jason ordered 239,021 pounds of flour to be used in his 25 bakeries. The company delivering the flour showed up with 451,202 pounds. How many extra pounds of flour were delivered?

3. In May, the New York Public Library had 124,061 books checked out. Of those books, 31,117 were mystery books. How many of the books checked out were not mystery books?

4. A Class A dump truck can haul 239,000 pounds of dirt. A Class C dump truck can haul 600,200 pounds of dirt. How many more pounds can a Class C truck haul than a Class A truck?
Lesson 15

Objective: Use place value understanding to fluently decompose to smaller units multiple times in any place using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Suggested Lesson Structure

- Fluency Practice (11 minutes)
- Application Problem (6 minutes)
- Concept Development (32 minutes)
- Student Debrief (11 minutes)
- Total Time (60 minutes)

Fluency Practice (11 minutes)

- Place Value 4.NBT.2 (3 minutes)
- Find the Difference 4.NBT.4 (4 minutes)
- Convert Units 4.MD.1 (4 minutes)

Place Value (3 minutes)

Materials: (T) Personal white board

Note: Practicing these skills in isolation helps lay a foundation for conceptually understanding this lesson’s content.

T: (Write 4,598.) Say the number.
S: 4,598.
T: What digit is in the tens place?
S: 9.
T: (Underline 9.) What’s the value of the 9?
S: 90.
T: State the value of the digit 4.
S: 4,000.
T: 5?
S: 500.

Repeat using the following possible sequence: 69,708; 398,504; and 853,967.
Lesson 15:

Use place value understanding to fluently decompose to smaller units multiple times in any place using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

**Find the Difference (4 minutes)**

Materials: (S) Personal white board

Note: This math fluency activity prepares students for understanding the importance of the subtraction algorithm.

T: (Write 846 – 304 = _____.) Write a subtraction sentence horizontally or vertically.

S: (Write 846 – 304 = 542.)

Repeat process and sequence for 8,056 – 5,004; 935 – 17; 4,625 – 815; and 45,836 – 2,906.

**Convert Units (4 minutes)**

Note: This material is review of Grade 2 and Grade 3 and helps prepare students to solve problems with meters and centimeters in G4–M2–Topic A.

Materials: (S) Personal white board

T: Count by 20 centimeters. When you get to 100 centimeters, say 1 meter. When you get to 200 centimeters, say 2 meters.

S: 20 cm, 40 cm, 60 cm, 80 cm, 1 m, 120 cm, 140 cm, 160 cm, 180 cm, 2 m.

Repeat process, this time pulling out the meter (e.g., 1 m 20 cm, 1 m 40 cm, etc.).

T: (Write 130 cm = ___ m ___ cm.) On your personal white boards, fill in the blanks.

S: (Write 130 cm = 1 m 30 cm.)

Repeat process for 103 cm, 175 cm, 345 cm, and 708 cm for composing to meters.

**Application Problem (6 minutes)**

When the amusement park opened, the number on the counter at the gate read 928,614. At the end of the day, the counter read 931,682. How many people went through the gate that day?

Note: At times, we ask students to use a specific strategy, and at other times, we see what they do independently. This question engages students in **MP.5** by leaving open the solution path.
Lesson 15: Use place value understanding to fluently decompose to smaller units multiple times in any place using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Date: 5/26/14

Concept Development (32 minutes)

Materials: (T) Millions place value chart (Lesson 11) (S) Personal white board, millions place value chart (Lesson 11 Template)

Problem 1: Regroup units 5 times to subtract.

Write 253,421 – 75,832 vertically on the board.

T: Say this problem with me.

T: Work with your partner to draw a tape diagram representing this problem.

T: What is the whole amount?

S: 253,421.

T: What is the part?

S: 75,832.

T: Look across the top number, 253,421, to see if we have enough units in each column to subtract 75,832. Are we ready to subtract?

S: No!

T: Are there enough ones in the top number to subtract the ones in the bottom number? (Point to the 1 and 2 in the ones column.)

S: No, 1 one is less than 2 ones.

T: What should we do?

S: Change 1 ten for 10 ones. That means you have 1 ten and 11 ones.

T: Are there enough tens in the top number to subtract the tens in the bottom number? (Point to tens column.)

S: No, 1 ten is less than 3 tens.

T: What should we do?

S: Change 1 hundred for 10 tens. You have 3 hundreds and 11 tens.

T: The tens column is ready to subtract.

Have partners continue questioning if there are enough units to subtract in each column, regrouping where needed.

NOTES ON MULTIPLE MEANS OF ENGAGEMENT:

Students of all abilities will benefit from using addition to check subtraction. Students should see that if the sum does not match the whole, the subtraction (or calculation) is faulty. They must subtract again and then check with addition. Challenge students to think about how they use this check strategy in everyday life. We use it all of the time when we add up to another number.
Lesson 15:
Use place value understanding to fluently decompose to smaller units multiple times in any place using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Date: 5/26/14

T: Are we ready to subtract?
S: Yes, we’re ready to subtract!
T: Go ahead and subtract. State the difference to your partner. Label the unknown part in your tape diagram.
S: The difference between 253,421 and 75,832 is 177,589. (Label A = 177,589.)
T: Add the difference to the part you knew to see if your answer is correct.
S: It is. The sum of the parts is 253,421.

Problem 2: Decompose numbers from 1 thousand and 1 million into smaller units to subtract, modeled with place value disks.

Write 1,000 – 528 vertically on the board.

T: With your partner, read this problem and draw a tape diagram. Label what you know and the unknown.

T: Record the problem on your personal white board.
T: Look across the units in the top number. Are we ready to subtract?
S: No!
T: Are there enough ones in the top number to subtract the ones in the bottom number? (Point to 0 and 8 in the ones column.)
S: No. 0 ones is less than 8 ones.
T: I need to ungroup 1 unit from the tens. What do you notice?
S: There are no tens to ungroup.
T: We can look to the hundreds. (There are no hundreds to ungroup either.)
T: In order to get 10 ones, we need to regroup 1 thousand. Watch as I represent the ungrouping in my subtraction problem. (Model using place value disks and rename units in the problem simultaneously.) Now it’s your turn.

MP.6

NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:

Encourage students who notice a pattern of repeated nines when subtracting across multiple zeros to express this pattern in writing. Allow students to identify why this happens using manipulatives and/or in writing. Allow students to slowly transition into recording this particular unbundling across zeros as nines as they become fluent with using the algorithm.
Lesson 15:

**Use place value understanding to fluently decompose to smaller units multiple times in any place using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.**

**Date:** 5/26/14

---

**Problem 1:**

T: Are we ready to subtract?
S: Yes, we’re ready to subtract!

T: Solve for 9 hundreds 9 tens 10 ones minus 5 hundreds 2 tens 8 ones.
S: 1,000 – 528 is 472.
T: Check our answer.
S: The sum of 472 and 528 is 1000.

Write 1,000,000 – 345,528 vertically on the board.

T: Read this problem, and draw a tape diagram to represent the subtraction problem.
T: Record the subtraction problem on your board.

T: What do you notice when you look across the top number?
S: There are a lot more zeros. → We will have to regroup 6 times. → We are not ready to subtract.
   We will have to regroup 1 million to solve the problem.
T: Work with your partner to get 1,000,000 ready to subtract. Rename your units in the subtraction problem.
S: 9 hundred thousands 9 ten thousands 9 thousands 9 hundreds 9 tens 10 ones. We are ready to subtract!
S: 1,000,000 minus 345,528 equals 654,472.
T: To check your answer, add the parts to see if you get the correct whole amount.
S: We did! We got one million when we added the parts.

**Problem 3: Solve a word problem, decomposing units multiple times.**

Last year, there were 620,073 people in attendance at a local parade. This year, there were 456,795 people in attendance. How many more people were in attendance last year?

T: Read with me.
T: Represent this information in a tape diagram.
T: Work with your partner to write a subtraction problem using the information in the tape diagram.
T: Look across the units in the top number. Are you ready to subtract?
S: No, I do not have enough ones in the top number. I need to unbundle 1 ten to make 10 ones. Then I have 6 tens and 13 ones.
T: Continue to check if you are ready to subtract in each column. When you are ready to subtract, solve.
S: 620,073 minus 456,795 equals 163,278. There were 163,278 more people in attendance last year.
Lesson 15

Use place value understanding to fluently decompose to smaller units multiple times in any place using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (11 minutes)

Lesson Objective: Use place value understanding to fluently decompose to smaller units multiple times in any place using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson. You may choose to use any combination of the questions below to lead the discussion.

- Problems 1(e) and (f) were similar. Did anyone notice a pattern that could be used to solve these problems?
- How did your tape diagrams differ in Problems 2, 3, and 4?
- How do you know when you are ready to subtract across the problem?
- How can you check your answer when subtracting?
- Is there a number that you can subtract from 1,000,000 without decomposing across to the ones (other than 1,000,000)? 100,000? 10,000?
Lesson 15: Use place value understanding to fluently decompose to smaller units multiple times in any place using the standard subtraction algorithm, and apply the algorithm to solve word problems using tape diagrams.

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.

How can decomposing multiple times be challenging?

How does the tape diagram help you determine which operation to use to find the answer?

Directions: Use tape diagrams and the standard algorithm to solve the problems below. Check your answers.

1. A bird is flying from Hong Kong to Florence. The total flight distance is 11,972 miles. If the plane has already traveled 3,954 miles, how far has it already traveled?

   \[
   \begin{align*}
   &11,972 \text{ miles} \\
   -&3,954 \text{ miles} \\
   = &8,018 \text{ miles}
   \end{align*}
   \]

   The plane has already traveled 8,018 miles.

2. Task A holds 876,800 gallons of water. Task B holds 850,827 gallons of water. How much less water does Task A hold than Task B?

   \[
   \begin{align*}
   &876,800 \text{ gallons} \\
   -&850,827 \text{ gallons} \\
   = &25,973 \text{ gallons}
   \end{align*}
   \]

   Task A holds 25,973 less gallons of water than Task B.

3. Mark had $250.00 in his bank account on Thursday. On Friday, he added his paycheck to the bank account, and he then had $110.01 in the account. What was the amount of Mark’s paycheck?

   \[
   \begin{align*}
   &250.00 \text{ dollars} \\
   +&100.01 \text{ dollars} \\
   = &350.01 \text{ dollars}
   \end{align*}
   \]

   Mark's paycheck was $350.01.
1. Use the standard subtraction algorithm to solve the problems below.

   a. \[101,660 - 91,680\]
   b. \[101,660 - 99,800\]

   c. \[242,561 - 44,702\]
   d. \[242,561 - 74,987\]

   e. \[1,000,000 - 592,000\]
   f. \[1,000,000 - 592,500\]

   g. \[600,658 - 592,569\]
   h. \[600,000 - 592,000\]
Use tape diagrams and the standard algorithm to solve the problems below. Check your answers.

2. David is flying from Hong Kong to Buenos Aires. The total flight distance is 11,472 miles. If the plane has 7,793 miles left to travel, how far has it already traveled?

3. Tank A holds 678,500 gallons of water. Tank B holds 905,867 gallons of water. How much less water does Tank A hold than Tank B?

4. Mark had $25,081 in his bank account on Thursday. On Friday, he added his paycheck to the bank account, and he then had $26,010 in the account. What was the amount of Mark's paycheck?
Lesson 15 Exit Ticket

Name ________________________________ Date __________________________

Draw a tape diagram to model each problem and solve.

1. 956,204 – 780,169 = ___________

2. A construction company was building a stone wall on Main Street. 100,000 stones were delivered to the site. On Monday, they used 15,631 stones. How many stones remain for the rest of the week? Write your answer as a statement.
Name ___________________________ Date ________________

1. Use the standard subtraction algorithm to solve the problems below.

\[
\begin{align*}
\text{a.} \quad 9,656 & \quad - \quad 838 \\
\text{b.} \quad 59,656 & \quad - \quad 5,880 \\
\text{c.} \quad 759,656 & \quad - \quad 579,989 \\
\text{d.} \quad 294,150 & \quad - \quad 166,370 \\
\text{e.} \quad 294,150 & \quad - \quad 239,089 \\
\text{f.} \quad 294,150 & \quad - \quad 96,400 \\
\text{g.} \quad 800,500 & \quad - \quad 79,989 \\
\text{h.} \quad 800,500 & \quad - \quad 45,500 \\
\text{i.} \quad 800,500 & \quad - \quad 276,664
\end{align*}
\]
Use tape diagrams and the standard algorithm to solve the problems below. Check your answers.

2. A fishing boat was out to sea for 6 months and traveled a total of 8,578 miles. In the first month, the boat traveled 659 miles. How many miles did the fishing boat travel during the remaining 5 months?

3. A national monument had 160,747 visitors during the first week of September. A total of 759,656 people visited the monument in September. How many people visited the monument in September after the first week?

4. Shadow Software Company earned a total of $800,000 selling programs during the year 2012. $125,300 of that amount was used to pay expenses of the company. How much profit did Shadow Software Company make in the year 2012?

5. At the local aquarium, Bubba the Seal ate 25,634 grams of fish during the week. If, on the first day of the week, he ate 6,987 grams of fish, how many grams of fish did he eat during the remainder of the week?
Lesson 16

Objective: Solve two-step word problems using the standard subtraction algorithm fluently modeled with tape diagrams, and assess the reasonableness of answers using rounding.

Suggested Lesson Structure

- Fluency Practice (12 minutes)
- Application Problem (5 minutes)
- Concept Development (30 minutes)
- Student Debrief (13 minutes)
- Total Time (60 minutes)

Fluency Practice (12 minutes)

- Sprint: Convert Meters and Centimeters to Centimeters 4.MD.1 (8 minutes)
- Compare Numbers 4.NBT.2 (4 minutes)

Sprint: Convert Meters and Centimeters to Centimeters (8 minutes)

Materials: (S) Convert Meters and Centimeters to Centimeters Sprint

Note: Reviewing unit conversions that were learned in Grade 3 helps to prepare the students to solve problems with meters and centimeters in Module 2, Topic A.

Compare Numbers (4 minutes)

Materials: (S) Personal white board

Note: Reviewing this concept helps students work towards mastery of comparing numbers.

T: (Project 342,006 _____ 94,983.) On your personal white boards, compare the numbers by writing the greater than, less than, or equal symbol.

S: (Write 342,006 > 94,983.)

Repeat with the following possible sequence: 7 thousands 5 hundreds 8 tens ______ 6 ten thousands 5 hundreds 8 ones, and 9 hundred thousands 8 thousands 9 hundreds 3 tens ______ 807,820.
Application Problem (5 minutes)

For the weekend basketball playoffs, a total of 61,941 tickets were sold. 29,855 tickets were sold for Saturday’s games. The rest of the tickets were sold for Sunday’s games. How many tickets were sold for Sunday’s games?

Note: This Application Problem reviews content from the prior lesson of using the subtraction algorithm with multiple regroupings.

Concept Development (30 minutes)

Materials: (S) Personal white board

Problem 1: Solve a two-step word problem, modeled with a tape diagram, assessing reasonableness of the answer using rounding.

A company has 3 locations with 70,010 employees altogether. The first location has 34,857 employees. The second location has 17,595 employees. How many employees work in the third location?

T: Read with me. Take 2 minutes to draw and label a tape diagram. (Circulate and encourage the students: “Can you draw something?” “What can you draw?”)

T: (After 2 minutes.) Tell your partner what you understand and what you still don’t understand.

S: We know the total number of employees and the employees at the first and second locations. We don’t know how many employees are at the third location.

32,086 tickets were sold for Sunday’s games.
Lesson 16:

Solve two-step word problems using the standard subtraction algorithm fluently modeled with tape diagrams and assess the reasonableness of answers using rounding.

Date: 5/26/14

T: Use your tape diagram to estimate the number of employees at the third location. Explain your reasoning to your partner.

S: I rounded the number of employees. 30,000 + 20,000 = 50,000, and I know that the total number of employees is about 70,000. That means that there would be about 20,000 employees at the third location.

T: Now, find the precise answer. Work with your partner to do so. (Give students time to work.)

T: Label the unknown part on your diagram, and make a statement of the solution.

S: There are 17,558 employees at the third location.

T: Is your answer reasonable?

S: Yes, because 17,558 rounded to the nearest ten thousand is 20,000, and that was our estimate.

Problem 2: Solve two-step word problems, modeled with a tape diagram, assessing reasonableness of the answer using rounding.

Owen’s goal is to have 1 million people visit his new website within the first four months of it being launched. Below is a chart showing the number of visitors each month. How many more visitors does he need in Month 4 to reach his goal?

<table>
<thead>
<tr>
<th>Month</th>
<th>Month 1</th>
<th>Month 2</th>
<th>Month 3</th>
<th>Month 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visitors</td>
<td>228,211</td>
<td>301,856</td>
<td>299,542</td>
<td></td>
</tr>
</tbody>
</table>

T: With your partner, draw a tape diagram. Tell your partner your strategy for solving this problem.

S: We can find the sum of the number of visitors during the first 3 months. Then, we subtract that from 1 million to find how many more visitors are needed to reach his goal.

T: Make an estimate for the number of visitors in Month 4. Explain your reasoning to your partner.
Lesson 16:

Solve two-step word problems using the standard subtraction algorithm fluently modeled with tape diagrams and assess the reasonableness of answers using rounding.

NOTES ON MULTIPLE MEANS OF ENGAGEMENT:

Challenge students working above grade level to expand their thinking and to figure out another way to solve the two-step problem. Is there another strategy that would work?

Problem 3: Solve a two-step, compare with smaller unknown word problem.

There were 12,345 people at a concert on Saturday night. On Sunday night, there were 1,795 fewer people at the concert than on Saturday night. How many people attended the concert on both nights?

T: For 2 minutes, with your partner, draw a tape diagram. (Circulate and encourage students as they work. You might choose to call two pairs of students to draw on the board while others work at their seats. Have the pairs then present their diagrams to the class.)

S: I can round to the nearest hundred thousand and estimate. Owen will need about 200,000 visitors to reach his goal. \( \rightarrow \) I rounded to the nearest ten thousand to get a closer estimate of 170,000 visitors.

T: Find the total for the first 3 months. What is the precise sum?

S: 829,609.

T: Compare the actual and estimated solutions. Is your answer reasonable?

S: Yes, because our estimate of 200,000 is near 170,391. \( \rightarrow \) Rounded to the nearest hundred thousand, 170,391 is 200,000. \( \rightarrow \) 170,391 rounded to the nearest ten thousand is 170,000 which was also our estimate, so our solution is reasonable.

There were 12,345 people at a concert on Saturday night. On Sunday night, there were 1,795 fewer people at the concert than on Saturday night. How many people attended the concert on both nights?

\[
\begin{array}{c}
\text{Sat.} & 12,345 \\
\text{Sun.} & 1,795 \\
\hline
& 10,550 \\
& +10,550 \\
\hline
& 22,895
\end{array}
\]

22,895 people attended the concert on both nights.

T: Make an estimate of the solution. Explain your reasoning to your partner.

S: Rounding to the nearest thousand, the number of people on Saturday night was about 12,000. The number of people fewer on Sunday night can be rounded to 2,000, so the estimate for the number of people on Sunday is 10,000. 12,000 + 10,000 is 22,000.

T: Find the exact number of people who attended the concert on both nights. What is the exact sum?

S: 22,895.
Lesson 16

Lesson Objective: Solve two-step word problems using the standard subtraction algorithm fluently modeled with tape diagrams and assess the reasonableness of answers using rounding.

Student Debrief (13 minutes)

How did your estimate help you determine that your exact answer was reasonable in Problem 1?

In Problem 2, how close was your actual answer to your estimate?

Why was the estimate so much smaller than the exact answer in Problem 2?

In Problem 3, to which place did you round? Why?

How did your tape diagram help you solve Problem 5?
- How do you determine what place value to round to when finding an estimate?
- What is the benefit of checking the reasonableness of your answer?
- Describe the difference between rounding and estimating.

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Lesson 16 Sprint

### A

Write in centimeters.

Lesson 16:
Solve two-step word problems using the standard subtraction algorithm fluently modeled with tape diagrams and assess the reasonableness of answers using rounding.

Name _____________________________________________ Date ______________________

Estimate first, and then solve each problem. Model the problem with a tape diagram. Explain if your answer is reasonable.

1. On Monday, a farmer sold 25,196 pounds of potatoes. On Tuesday, he sold 18,023 pounds. On Wednesday, he sold some more potatoes. In all, he sold 62,409 pounds of potatoes.

   a. About how many pounds of potatoes did the farmer sell on Wednesday? Estimate by rounding each value to the nearest thousand, and then compute.

   b. Find the precise number of pounds of potatoes sold on Wednesday.

   c. Is your precise answer reasonable? Compare your estimate from (a) to your answer from (b). Write a sentence to explain your reasoning.
2. A gas station had two pumps. Pump A dispensed 241,752 gallons. Pump B dispensed 113,916 more gallons than Pump A.

   a. About how many gallons did both pumps dispense? Estimate by rounding each value to the nearest hundred thousand and then compute.

   b. Exactly how many gallons did both pumps dispense?

   c. Assess the reasonableness of your answer in (b). Use your estimate from (a) to explain.

3. Martin’s car had 86,456 miles on it. Of that distance, Martin’s wife drove 24,901 miles, and his son drove 7,997 miles. Martin drove the rest.

   a. About how many miles did Martin drive? Round each value to estimate.

   b. Exactly how many miles did Martin drive?

   c. Assess the reasonableness of your answer in (b). Use your estimate from (a) to explain.
4. A class read 3,452 pages the first week and 4,090 more pages in the second week. How many pages had they read by the end of the second week? Is your answer reasonable? Explain how you know using estimation.

5. A cargo plane weighed 500,000 pounds. After the first load was taken off, the airplane weighed 437,981 pounds. Then 16,478 more pounds were taken off. What was the total number of pounds of cargo removed from the plane? Is your answer reasonable? Explain.
Quarterback Brett Favre passed for 71,838 yards between the years 1991 and 2011. His all-time high was 4,413 passing yards in one year. In his second highest year, he threw 4,212 passing yards.

1. About how many passing yards did he throw in the remaining years? Estimate by rounding each value to the nearest thousand and then compute.

2. Exactly how many passing yards did he throw in the remaining years?

3. Assess the reasonableness of your answer in (b). Use your estimate from (a) to explain.
Lesson 16 Homework

Name ___________________________________________ Date ________________

1. Zachary’s final project for a college course took a semester to write and had 95,234 words. Zachary wrote 35,295 words the first month and 19,240 words the second month.

   a. Round each value to the nearest ten thousand to estimate how many words Zachary wrote during the remaining part of the semester.

   b. Find the exact number of words written during the remaining part of the semester.

   c. Use your answer from (a) to explain why your answer in (b) is reasonable.
2. During the first quarter of the year, 351,875 people downloaded an app for their smartphones. During the second quarter of the year, 101,949 fewer people downloaded the app than during the first quarter. How many downloads occurred during the two quarters of the year?

   a. Round each number to the nearest hundred thousand to estimate how many downloads occurred during the first two quarters of the year.

   b. Determine exactly how many downloads occurred during the first two quarters of the year.

   c. Determine if your answer is reasonable. Explain.

3. A local store was having a two-week Back to School sale. They started the sale with 36,390 notebooks. During the first week of the sale, 7,424 notebooks were sold. During the second week of the sale, 8,967 notebooks were sold. How many notebooks were left at the end of the two weeks? Is your answer reasonable?
Topic F
Addition and Subtraction Word Problems

4.OA.3, 4.NBT.1, 4.NBT.2, 4.NBT.4

Focus Standard: 4.OA.3

Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Instructional Days: 3

Coherence -Links from: G3–M2 Place Value and Problem Solving with Units of Measure
-Links to: G5–M1 Place Value and Decimal Fractions

Module 1 culminates with multi-step addition and subtraction word problems in Topic F (4.OA.3). In these lessons, the format for the Concept Development is different from the traditional vignette. Instead of following instruction, the Problem Set facilitates the problems and discussion of the Concept Development.

Throughout the module, tape diagrams are used to model word problems, and students continue to use tape diagrams to solve additive comparative word problems. Students also continue using a variable to represent an unknown quantity.

To culminate the module, students are given tape diagrams or equations and are encouraged to use creativity and the mathematics learned during this module to write their own word problems to solve using place value understanding and the algorithms for addition and subtraction. The module facilitates deeper comprehension and supports determining the reasonableness of an answer. Solving multi-step word problems using multiplication and division are addressed in later modules.
### A Teaching Sequence Towards Mastery of Addition and Subtraction Word Problems

**Objective 1:** Solve *additive compare* word problems modeled with tape diagrams.  
(Lesson 17)

**Objective 2:** Solve multi-step word problems modeled with tape diagrams, and assess the reasonableness of answers using rounding.  
(Lesson 18)

**Objective 3:** Create and solve multi-step word problems from given tape diagrams and equations.  
(Lesson 19)
Lesson 17

Objective: Solve additive compare word problems modeled with tape diagrams.

Suggested Lesson Structure

- Fluency Practice (10 minutes)
- Application Problem (8 minutes)
- Concept Development (35 minutes)
- Student Debrief (7 minutes)

Total Time (60 minutes)

Fluency Practice (10 minutes)

- Change Place Value 4.NBT.2 (5 minutes)
- Convert Units 4.MD.1 (5 minutes)

Change Place Value (5 minutes)

Materials: (S) Personal white board, labeled millions place value chart (Lesson 11 Template)

Note: This fluency activity helps students work toward mastery of using place value skills to add and subtract different units.

T: (Project place value chart to the millions place. Write 4 hundred thousands, 6 ten thousands, 3 thousands, 2 hundreds, 6 tens, 5 ones.) On your personal white boards, write the number.

S: (Write 463,265.)

T: Show 100 more.

S: (Write 463,365.)

Possible further sequence: 10,000 less, 100,000 more, 1 less, and 10 more.

T: (Write 400 + 90 + 3 = ____.) On your place value chart, write the number.

Possible further sequence: 7,000 + 300 + 80 + 5; 20,000 + 700,000 + 5 + 80; 30,000 + 600,000 + 3 + 20.

Convert Units (5 minutes)

Note: This fluency activity strengthens understanding of the relationship between kilograms and grams learned in Grade 3 and prepares students to use this relationship to solve problems in G4–M2–Topic A. Use a number bond to support understanding the relationship of grams and kilograms.

T: (Write 1 kg = ____ g.) How many grams are in 1 kilogram?
S: 1 kg = 1,000 g.
Repeat the process for 2 kg, 3 kg, 8 kg, 8 kg 500 g, 7 kg 500 g, and 4 kg 250 g.

T: (Write 1,000 g = ___ kg.) Say the answer.
S: 1,000 grams equals 1 kilogram.
T: (Write 1,500 g = ___ kg ___ g.) Say the answer.
S: 1,500 grams equals 1 kilogram 500 grams.
Repeat the process for 2,500 g, 3,500 g, 9,500 g, and 7,250 g.

Application Problem (8 minutes)

A bakery used 12,674 kg of flour. Of that, 1,802 kg was whole wheat and 888 kg was rice flour. The rest was all-purpose flour. How much all-purpose flour did they use? Solve and check the reasonableness of your answer.

Note: This problem leads into today’s lesson and bridges as it goes back into the work from Lesson 16.

Concept Development (35 minutes)

Materials: (S) Problem Set

Suggested Delivery of Instruction for Solving Topic F’s Word Problems

1. Model the problem.

Have two pairs of students, who you think can be successful with modeling the problem, work at the board while the others work independently or in pairs at their seats. Review the following questions before solving the first problem.

- Can you draw something?
- What can you draw?
- What conclusions can you make from your drawing?

As students work, circulate. Reiterate the questions above.

After 2 minutes, have the two pairs of students share only their labeled diagrams.
Lesson 17

For about 1 minute, have the demonstrating students receive and respond to feedback and questions from their peers.

2. Calculate to solve and write a statement.

Give everyone 2 minutes to finish work on the problem, sharing his or her work and thinking with a peer. All should then write their equations and statements for the answer.

3. Assess the solution for reasonableness.

Give students 1–2 minutes to assess and explain the reasonableness of their solutions.

Note: In Lessons 17–19, the Problem Set is comprised of word problems from the lesson and is therefore to be used during the lesson itself.

Problem 1: Solve a single-step word problem using how much more.

Sean’s school raised $32,587. Leslie’s school raised $18,749. How much more money did Sean’s school raise?

Support students in realizing that though the question is asking, “How much more?” we can see from the tape diagram that the unknown is a missing part, and, therefore, we subtract to find the answer.

Problem 2: Solve a single-step word problem using how many fewer.

At a parade, 97,853 people sat in bleachers. 388,547 people stood along the street. How many fewer people were in the bleachers than standing along the street?

Notes on Multiple Means of Action and Expression:

Students working below grade level may continue to need additional support in subtracting numbers using place value charts or disks.

Notes on Multiple Means of Engagement:

Challenge students to think about how reasonableness can be associated with rounding. If the actual answer does not round to the estimate, does it mean that the answer is not reasonable?

Ask students to explain their thinking. (For example, 376 – 134 = 242. Rounding to the nearest hundred would result with an estimate of 400 – 100 = 300. The actual answer of 242 rounds to 200, not 300.)
Circulate and support students to realize that the unknown number of how many fewer people is the difference between the two tape diagrams. Encourage them to write a statement using the word *fewer* when talking about separate things. For example, I have *fewer* apples than you do and *less* juice.

**Problem 3: Solve a two-step problem using how much more.**

A pair of hippos weighed 5,201 kilograms together. The female weighed 2,038 kilograms. How much more did the male weigh than the female?

Many students may want to draw this as a single tape showing the combined weight to start. That works. However, the second step most likely requires a new double tape to compare the weights of the male and female. If no one comes up with the model pictured, you can show it quickly. Students generally do not choose to draw a bracket with the known total to the side until they are very familiar with two-step comparison models. However, be aware that students have modeled this problem type since Grade 2.

**Problem 4: Solve a three-step problem using how much longer.**

A copper wire was 240 meters long. After 60 meters was cut off, it was double the length of a steel wire. How much longer was the copper wire than the steel wire at first?

T: Read the problem, draw a model, write equations both to estimate and calculate precisely, and write a statement. I'll give you 5 minutes.

Circulate, using the bulleted questions to guide students. When students get stuck, encourage them to focus on what they can learn from their drawings.

- Show me the copper wire at first.
- In your model, show me what happened to the copper wire.
- In your model, show me what you know about the steel wire.
- What are you comparing? Where is that difference in your model?

Notice the number size is quite small here. The calculations are not the issue but rather the relationships.
Students will eventually solve similar problems with larger numbers, but they will begin here at a simple level numerically.

**Problem Set**

Please note that in Topic F, the Problem Sets are used in the Concept Developments. As a result, the 10 minutes usually allotted for the completion of the Problem Set are not needed.

**Student Debrief (7 minutes)**

**Lesson Objective:** Solve additive compare word problems modeled with tape diagrams.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

You may choose to use any combination of the questions below to lead the discussion.

- How are your tape diagrams for Problem 1 and Problem 2 similar?
- How did your tape diagrams vary across all problems?
- In Problem 3, how did drawing a double tape diagram help you to visualize the problem?
- What was most challenging about drawing the tape diagram for Problem 4? What helped you find the best diagram to solve the problem?
- What different ways are there to draw a tape diagram to solve comparative problems?
- What does the word compare mean?
- What phrases do you notice repeated through many of today’s problems that help you to see the problem as a comparative problem?

**Exit Ticket (3 minutes)**

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Lesson 17 Problem Set

Name __________________________________________ Date ____________________________

Draw a tape diagram to represent each problem. Use numbers to solve, and write your answer as a statement.

1. Sean’s school raised $32,587. Leslie’s school raised $18,749. How much more money did Sean’s school raise?

2. At a parade, 97,853 people sat in bleachers and 388,547 people stood along the street. How many fewer people were in the bleachers than standing on the street?

3. A pair of hippos weighed 5,201 kilogram together. The female weighed 2,038 kilogram. How much more did the male weigh than the female?

4. A copper wire was 240 meters long. After 60 meters was cut off, it was double the length of a steel wire. How much longer was the copper wire than the steel wire at first?
Draw a tape diagram to represent each problem. Use numbers to solve, and write your answer as a statement.

A mixture of 2 chemicals measures 1,034 milliliters. It contains some of Chemical A and 755 milliliters of Chemical B. How much less of Chemical A than Chemical B is in the mixture?
Lesson 17: Solve additive compare word problems modeled with tape diagrams.

Date: 5/26/14

Draw a tape diagram to represent each problem. Use numbers to solve, and write your answer as a statement.

1. Gavin has 1,094 toy building blocks. Avery only has 816 toy building blocks. How many more building blocks does Gavin have?

2. Container B holds 2,391 liters of water. Together, Container A and Container B hold 11,875 liters of water. How many more liters of water does Container A hold than Container B?

3. A piece of yellow yarn was 230 inches long. After 90 inches had been cut from it, the piece of yellow yarn was twice as long as a piece of blue yarn. At first, how much longer was the yellow yarn than the blue yarn?
Lesson 18

Objective: Solve multi-step word problems modeled with tape diagrams, and assess the reasonableness of answers using rounding.

Suggested Lesson Structure

- Fluency Practice (10 minutes)
- Application Problem (5 minutes)
- Concept Development (33 minutes)
- Student Debrief (12 minutes)

Total Time (60 minutes)

Fluency Practice (10 minutes)

- Number Patterns 4.OA.5 (5 minutes)
- Convert Units 4.MD.1 (5 minutes)

Number Patterns (5 minutes)

Materials: (S) Personal white board

Note: This fluency activity bolsters students’ place value understanding and helps them apply these skills to a variety of concepts.

T: (Project 40,100, 50,100, 60,100, ____.) What is the place value of the digit that’s changing?
S: Ten thousand.
T: Count with me saying the value of the digit I’m pointing to.
S: (Point at the ten thousand digit as students count.) 40,000, 50,000, 60,000.
T: On your personal white boards, write what number would come after 60,100.
S: (Write 70,100.)

Repeat with the following possible sequence: 82,030, 72,030, 62,030, ____ ; 215,003, 216,003, 217,003, ____ ; 943,612, 943,512, 943,412, ____ ; and 372,435, 382,435, 392,435, ____.

Convert Units (5 minutes)

Materials: (S) Personal white board

Note: This fluency activity strengthens understanding of the relationship between kilograms and grams learned in Grade 3, preparing students to use this relationship to solve problems in G4–M2–Topic A. Use a number bond to support understanding of the relationship between grams and kilograms.
Lesson 18: Solve multi-step word problems modeled with tape diagrams and assess the reasonableness of answers using rounding.

Date: 5/26/14

T: Count by 200 grams starting at 0 grams and counting up to 2,000 grams. When you get to 1,000 grams, say 1 kilogram. When you get to 2,000 grams, say 2 kilograms.

S: 0 g, 200 g, 400 g, 600 g, 800 g, 1 kg, 1,200 g, 1,400 g, 1,600 g, 1,800 g, 2 kg.

Repeat the process, this time pulling out the kilogram (e.g., 1 kg 200 g, 1 kg 400 g).

T: (Write 1,300 g = ___ kg ___ g.) On your boards, fill in the blanks to make a true number sentence.

S: (Write 1,300 g = 1 kg 300 g.)

Repeat process for 1,003 g, 1,750 g, 3,450 g, and 7,030 g.

Application Problem (5 minutes)

In all, 30,436 people went skiing in February and January. 16,009 went skiing in February. How many fewer people went skiing in January than in February?

Note: This comparison subtraction problem reviews content from Lesson 17.

Concept Development (33 minutes)

Materials: (S) Problem Set

Suggested Delivery of Instruction for Solving Topic F’s Word Problems

1. Model the problem.

Have two pairs of students, who you think can be successful with modeling the problem, work at the board while the others work independently or in pairs at their seats. Review the following questions before beginning the first problem.

- Can you draw something?
- What can you draw?
- What conclusions can you make from your drawing?

As students work, circulate. Reiterate the questions above.

After 2 minutes, have the two pairs of students share only their labeled diagrams.
For about 1 minute, have the demonstrating students receive and respond to feedback and questions from their peers.

2. Calculate to solve and write a statement.

Give everyone 2 minutes to finish work on the problem, sharing his or her work and thinking with a peer. All should then write their equations and statements for the answer.

3. Assess the solution for reasonableness.

Give students 1–2 minutes to assess and explain the reasonableness of their solutions.

Note: In Lessons 17–19, the Problem Set is comprised of the word problems from the lesson and is, therefore, to be used during the lesson itself.

**Problem 1:** Solve a multi-step word problem requiring addition and subtraction, modeled with a tape diagram, and check the reasonableness of the answer using estimation.

In one year, a factory used 11,650 meters of cotton, 4,950 fewer meters of silk than cotton, and 3,500 fewer meters of wool than silk. How many meters in all were used of the three fabrics?

![Tape Diagram](image)

This problem is a step forward for students as they subtract to find the amount of wool from the amount of silk. Students also might subtract the sum of 4,950 and 3,500 from 11,650 to find the meters of wool and add that to the amount of silk. It’s a longer method but makes sense. As you circulate, look for other alternate strategies which can be quickly mentioned or explored more deeply as per your professional judgment. Be advised, however, not to emphasize creativity but rather analysis and efficiency. Ingenious short cuts might be highlighted.

After the students have solved the problem, ask them to check their answers for reasonableness:

- **T:** How can you know if 21,550 is a reasonable answer? Discuss with your partner.
- **S:** Well, I can see by looking at the diagram that the amount of wool fits in the part where the amount of silk is unknown, so the answer is a little less than double 12,000. Our answer makes sense.
- **S:** Another way to think about it is that 11,650 can be rounded to 12 thousands. 12 thousands plus 7 thousands for the silk, since 12 thousands minus 5 thousands is 7 thousands, plus about 4 thousands for the wool. That's 23 thousands.
Lesson 18

Problem 2: Solve an additive multi-step word problem using a tape diagram, modeled with a tape diagram, and check the reasonableness of the answer using estimation.

The shop sold 12,789 chocolate and 9,324 cookie dough cones. It sold 1,078 more peanut butter cones than cookie dough cones and 999 more vanilla cones than chocolate cones. What was the total number of ice cream cones sold?

The solution above shows calculating the total number of cones of each flavor and then adding. Students may also add like units before adding the extra parts.

After the students have solved the problem, ask them to check their answers for reasonableness:

T: How can you know if 46,303 is a reasonable answer? Discuss with your partner.
S: By looking at the tape diagram, I can see we have 2 thirteen thousands units. That’s 26 thousands. We have 2 nine thousands units. So 26 thousands and 18 thousands is 44 thousands. Plus about 2 thousands more. That’s 46 thousands. That’s close.
S: Another way to see it is that I can kind of see 2 thirteen thousands and the little extra pieces with the peanut butter make 11 thousands. That is 37 thousands plus 9 thousands from cookie dough is 46 thousands. That’s close.

Problem 3: Solve a multi-step word problem requiring addition and subtraction, modeled with a tape diagram, and check the reasonableness of the answer using estimation.

In the first week of June, a restaurant sold 10,345 omelets. In the second week, 1,096 fewer omelets were sold than in the first week. In the third week, 2 thousand more omelets were sold than in the first week. In the fourth week, 2 thousand fewer omelets were sold than in the first week. How many omelets were sold in all in June?
This problem is interesting because 2 thousand more and 2 thousand less mean that there is one more unit of 10,345. We, therefore, simply add in the omelets from the second week to three units of 10,345.

T: How can you know if 40,284 is a reasonable answer? Discuss with your partner.

S: By looking at the tape diagram, it’s easy to see it is like 3 ten thousands plus 9 thousands, that’s 39 thousands. That is close to our answer.

S: Another way to see it is just rounding one week at a time starting at the first week; 10 thousands plus 9 thousands plus 12 thousands plus 8 thousands. That’s 39 thousands.

**Problem Set**

Please note that in Topic F, the Problem Sets are used in the Concept Developments. As a result, the 10 minutes usually allotted for the completion of the Problem Set are not needed.

**Student Debrief (12 minutes)**

**Lesson Objective:** Solve multi-step word problems modeled with tape diagrams and assess the reasonableness of answers using rounding.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

You may choose to use any combination of the questions below to lead the discussion.

- How are the problems alike? How are they different?
- How was your solution the same and different from those that were demonstrated by your peers?
- Why is there more than one right way to solve, for example, Problem 3?
- Did you see other solutions that surprised you or made you see the problem differently?
- In Problem 1, was the part unknown or the total unknown? What about in Problems 2 and 3?
- Why is it helpful to assess for reasonableness after solving?
- How were the tape diagrams helpful in estimating to test for reasonableness? Why is that?
Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Lesson 18 Problem Set

Name _______________________________ Date __________________

Draw a tape diagram to represent each problem. Use numbers to solve, and write your answer as a statement.

1. In one year the factory used 11,650 meters of cotton, 4,950 fewer meters of silk than cotton, and 3,500 fewer meters of wool than silk. How many meters in all were used of the three fabrics?

2. The shop sold 12,789 chocolate and 9,324 cookie dough cones. It sold 1,078 more peanut butter cones than cookie dough cones and 999 more vanilla cones than chocolate cones. What was the total number of ice cream cones sold?

3. In the first week of June, a restaurant sold 10,345 omelets. In the second week, 1,096 fewer omelets were sold than in the first week. In the third week, 2 thousand more omelets were sold than in the first week. In the fourth week, 2 thousand fewer omelets were sold than in the first week. How many omelets were sold in all in June?
Lesson 18 Exit Ticket

Name ___________________________________________ Date ______________________

Draw a tape diagram to represent the problem. Use numbers to solve, and write your answer as a statement.

Park A covers an area of 4,926 square kilometers. It is 1,845 square kilometers larger than Park B. Park C is 4,006 square kilometers larger than Park A.

1. What is the area of all three parks?

2. Assess the reasonableness of your answer.
Lesson 18 Homework

Name _______________________________ Date ______________________

Draw a tape diagram to represent each problem. Use numbers to solve, and write your answer as a statement.

1. There were 22,869 children, 49,563 men, and 2,872 more women than men at the fair. How many people were at the fair?

2. Number A is 4,676. Number B is 10,043 greater than A. Number C is 2,610 less than B. What is the total value of numbers A, B, and C?

3. A store sold a total of 21,650 balls. It sold 11,795 baseballs. It sold 4,150 fewer basketballs than baseballs. The rest of the balls sold were footballs. How many footballs did the store sell?
Lesson 19

Objective: Create and solve multi-step word problems from given tape diagrams and equations.

Suggested Lesson Structure

- Fluency Practice (12 minutes)
- Application Problem (5 minutes)
- Concept Development (30 minutes)
- Student Debrief (13 minutes)

Total Time (60 minutes)

Fluency Practice (12 minutes)

- Rename Units to Subtract 4.NBT.4 (5 minutes)
- Add Up to the Next Unit 4.NBT.4 (3 minutes)
- Convert Units 4.MD.1 (4 minutes)

Rename Units to Subtract (5 minutes)

Note: This fluency activity supports further practice of decomposing a larger unit to make smaller units in order to subtract.

T: (Write: 1 ten – 6 ones.) Am I ready to subtract?
S: No.
T: Rename 1 ten as 10 ones. Say the entire number sentence.
S: 10 ones minus 6 ones is 4 ones.
Repeat with 2 tens – 6 ones, 2 tens – 1 ten 6 ones, 1 hundred – 6 tens, 2 hundreds – 4 tens, 3 hundreds – 1 hundred 4 tens, 5 thousands – 3 hundreds, 5 thousands – 3 thousands 3 hundreds, 2 ten thousands – 3 hundreds.

Add Up to the Next Unit (3 minutes)

Note: This fluency activity strengthens students’ ability to make the next unit, a skill used when using the arrow way to add or subtract. This activity also anticipates students’ use of the arrow way to solve mixed measurement unit addition and subtraction in Module 2.

T: (Write 8.) How many more to make 10?
S: 2.
T: (Write 80.) How many more to make 100?
Lesson 19: Create and solve multi-step word problems from given tape diagrams and equations.

Date: 5/26/14

S: 20.
T: (Write 84.) How many more to make 100?
S: 16.

Repeat with the following numbers to make 1000: 200, 250, 450, 475, 600, 680, 700, 720, 800, 805, 855, and 945.

**Convert Units (4 minutes)**

Note: Reviewing unit conversions that were learned in third grade helps prepare the students to solve problems with centimeters and meters in Topic A of Module 2.

Materials: (S) Personal white board

T: (Write 1 m = ___ cm.) How many centimeters are in a meter?
S: 1 m = 100 cm.

Repeat process for 2 m, 3 m, 8 m, 8 m 50 cm, 7 m 50 cm, and 4 m 25 cm.

T: (Write 100 cm = ___ m.) Say the answer.
S: 100 cm = 1 m.
T: (Write 150 cm = ___ m ___ cm.) Say the answer.
S: 150 cm = 1 m 50 cm. Repeat process for 250 cm, 350 cm, 950 cm, and 725 cm.

**Application Problem (5 minutes)**

For Jordan to get to his grandparents’ house, he has to travel through Albany and Plattsburgh. From Jordan’s house to Albany is 189 miles. From Albany to Plattsburgh is 161 miles. If the total distance of the trip is 508 miles, how far from Plattsburgh do Jordan’s grandparents live?

Note: This problem reviews two-step problems from the previous lessons.
Lesson 19:
Create and solve multi-step word problems from given tape diagrams and equations.

Date: 5/26/14

NOTES ON MULTIPLE MEANS OF REPRESENTATION:

Students who are English language learners may find it difficult to create their own problem. Work together with a small group of students to explain what the tape diagram is showing. Work with the students to write information into the tape diagram. Discuss what is known and unknown. Together, build a question based on the discussion.

Concept Development (30 minutes)

Materials: (S) Problem Set

Suggested Delivery of Instruction for Lesson 19’s Word Problems.

1. Draw the labeled tape diagram on the board, and give the students the context. Have them write a story problem based on the tape diagram.

   Have two pairs of students, who you think can be successful with writing a problem, work at the board while the others work independently or in pairs at their seats. Review the following questions before beginning the first problem.

   - What story makes sense with the diagram?
   - What question will I ask in my word problem?

   As students work, circulate. Reiterate the questions above.

   After 2 minutes, have the two pairs of students share their stories.

   For about 1 minute, have the demonstrating students receive and respond to feedback and questions from their peers.

2. Calculate to solve and write a statement.

   Give everyone 2 minutes to exchange stories, calculate, and make a statement of the answer.

3. Assess the solution for reasonableness.

   Give students 1–2 minutes to assess and explain the reasonableness of their solutions.

   Note: In Lessons 17–19, the Problem Set will be comprised of the word problems from the lesson and is, therefore, to be used during the lesson itself.

Problem 1: Create and solve a simple two-step word problem from the tape diagram below.

Suggested context: People at a football game.
Lesson 19: Create and solve multi-step word problems from given tape diagrams and equations.

Date: 5/26/14

Problem 2: Create and solve a two-step addition word problem from the tape diagram below.

Suggested context: Cost of two houses.

Problem 3: Create and solve a three-step word problem involving addition and subtraction from the tape diagram below.

Suggested context: Weight in kilograms of three different whales.

Problem 4: Students use equations to model and solve multi-step word problems.

Display the equation $5,233 + 3,094 + k = 12,946$.

T: Draw a tape diagram that models this equation.

T: Compare with your partner. Then create a word problem that uses the numbers from the equation. Remember to first create a context. Then write a statement about the total and a question about the unknown. Finally, tell the rest of the information.

Students work independently. Students can share problems in partners to solve or select word problems to solve as a class.

NOTES ON MULTIPLE MEANS OF ACTION AND REPRESENTATION:

Students working below grade level may struggle with the task of creating their own problems. These students may benefit from working together in a partnership with another student. First, encourage them to design a tape diagram showing the known parts, the unknown part, and the whole. Second, encourage them to create a word problem based on the diagram.
Lesson 19:
Create and solve multi-step word problems from given tape diagrams and equations.

Problem Set

Please note that the Problem Set in Topic F is comprised of the lesson’s problems as stated at the introduction of the lesson.

For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (13 minutes)

Lesson Objective: Create and solve multi-step word problems from given tape diagrams and equations.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

You may choose to use any combination of the questions below to lead the discussion.

- How does a tape diagram help when solving a problem?
- What is the hardest part about creating a context for a word problem?
- To write a word problem, what must you know?
- There are many different contexts for Problem 2, but everyone found the same answer. How is that possible?
- What have you learned about yourself as a mathematician over the past module?
- How can you use this new understanding of addition, subtraction, and solving word problems in the future?
Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Using the diagrams below, create your own word problem. Solve for the value of the variable.

1. 

2. 

Name __________________________________________ Date ____________________

Using the diagrams below, create your own word problem. Solve for the value of the variable.
3. Draw a tape diagram to model the following equation. Create a word problem. Solve for the value of the variable.

\[ 8,200 - 3,500 = ? - 2,010 \]

4. Draw a tape diagram to model the following equation. Create a word problem. Solve for the value of the variable.

\[ 26,854 = 17,729 + 3,731 + A \]
Using the diagram below, create your own word problem. Solve for the value of the variable.

1. 

2. Using the equation below, draw a tape diagram and create your own word problem. Solve for the value of the variable.

\[ 248,798 = 113,205 + A + 99,937 \]
Lesson 19 Homework

Name ________________________________ Date ______________

Using the diagrams below, create your own word problem. Solve for the value of the variable.

1. At the local botanical gardens, there are ________________
Redwoods and ________________ Cypress trees.
There are a total of ________________ Redwood, Cypress, and Dogwood trees.
How many ____________________________________
_____________________________________________
_____________________________________________?

2. There are 65,302 ________________
__________________________________.
There are 37,436 fewer ________________
__________________________________.
How many ____________________________________
___________________________________________?
3. Use the following tape diagram to create a word problem. Solve for the value of the variable.

4. Draw a tape diagram to model the following equation. Create a word problem. Solve for the value of the variable.

\[ 27,894 + A + 6,892 = 40,392 \]
1. a. Arrange the following numbers in order from least to greatest.
   504,054   4,450   505,045   44,500

   b. Use the words “ten times” to tell how you ordered the two smallest numbers using words, pictures, or numbers.

2. Compare using >, <, or =. Write your answer inside the circle.
   a. 1 hundred thousand   10,000
   b. 200 thousands 4 hundreds   204,000
   c. 7 hundreds + 4 thousands + 27 ones   6 thousands + 4 hundreds
   d. 1,000,000   10 hundred thousands
3. The football stadium at Louisiana State University (LSU) has a seating capacity of 92,542.
   
a. According to the 2010 census, the population of San Jose, CA was approximately ten times the amount of people that LSU’s stadium can seat. What was the population of San Jose in 2010?
   
   b. Write the seating capacity of the LSU stadium in words and in expanded form.
   
   c. Draw two separate number lines to round the LSU stadium’s seating capacity to the nearest ten thousand and to the nearest thousand.
   
   d. Compare the stadium’s seating rounded to the nearest ten thousand and the seating rounded to the nearest thousand using >, <, or =.
   
   e. Which estimate (rounding to the nearest ten thousand or nearest thousand) is more accurate? Use words and numbers to explain.
Mid-Module Assessment Task Standards Addressed

**Generalize place value understanding for multi-digit whole numbers.**

**4.NBT.1** Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. For example, recognize that \(700 \div 70 = 10\) by applying concepts of place value and division.

**4.NBT.2** Read and write multi-digit whole numbers using base-ten numerals, number names, and expanded form. Compare two multi-digit numbers based on meanings of the digits in each place, using \(>\), \(=\), and \(<\) symbols to record the results of comparisons.

**4.NBT.3** Use place value understanding to round multi-digit whole numbers to any place.

---

**Evaluating Student Learning Outcomes**

A Progression Toward Mastery chart is provided to describe steps that illuminate the gradually increasing understandings that students develop on their way to proficiency. In this chart, this progress is presented from left (Step 1) to right (Step 4). The learning goal for each student is to achieve Step 4 mastery. These steps are meant to help teachers and students identify and celebrate what the student CAN do now and what they need to work on next.

</table>
| **1 4.NBT.1** | The student arranged two numbers and provided no clear explanation for Part (b). | The student arranged two numbers in order or arranged the least and greatest numbers correctly. The student provided some explanation of “ten times.” | The student arranged three or four numbers correctly but was unable to articulate the relationship of the two smallest numbers using the words “ten times.” | The student correctly:
- Arranged the numbers in the following order: 4,450, 44,500, 504,054, 505,045.
- Used the words “ten times” to describe the relationship between 4,450 and 44,500. |

<tr>
<td>d.</td>
<td>90,000 &lt; 93,000</td>
<td></td>
</tr>
<tr>
<td>e.</td>
<td>Explains rounding to the nearest thousand is more accurate because rounding to a smaller unit gives a more accurate estimate, so the difference will be closer to the exact number.</td>
<td></td>
</tr>
</tbody>
</table>
1. Arrange the following numbers in order from least to greatest.

504,054  4,450  505,045  44,500
4,450  44,500  504,054  505,045

b. Use the words “ten times” to tell how you ordered the two smallest numbers using words, pictures and numbers.

44,500 is ten times 4,450 so it comes after 4,450 when going from smallest to greatest. Because 44,500 is ten times 4,450, the digits shift left one place value.

2. Compare using >, <, or =. Write your answer inside the circle.

a. 1 hundred thousand  \(>\) 10,000

b. 200 thousands 4 hundreds  \(<\) 204,000

c. 7 hundreds + 4 thousands + 27 ones  \(<\) 6 thousands + 4 hundreds

4,727  \(<\) 6,400

d. 1,000,000  \(=\) 10 hundred thousands

Name: Jack  Date: ___
3. The football stadium at Louisiana State University (LSU) has a seating capacity of 92,542.

a. According to the 2010 census, the population of San Jose, CA was approximately ten times the amount of people that LSU’s stadium can seat. What was the population of San Jose in 2010?

The population of San Jose is 925,420, because that is ten times 92,542.

b. Write the seating capacity of the LSU stadium in words and in expanded form.

Ninety-two thousand five hundred forty-two.

90,000 + 2,000 + 500 + 40 + 2

c. Draw two separate number lines to round the LSU stadium’s seating capacity to the nearest ten thousand and to the nearest thousand.

d. Compare the stadium’s seating rounded to the nearest ten thousand and the seating rounded to the nearest thousand using >, <, or =.

90,000 < 93,000

e. Which estimate (rounding to the nearest ten thousand or nearest thousand) is more accurate? Use words and numbers to explain.

Rounding to the nearest thousands is more accurate because the actual number, 92,542, is closer to 93,000 than 90,000.

Rounding to a smaller place value is more accurate because it will be closer to the actual number. That’s why for this problem, rounding to the thousands gave me an estimate closer to the actual number than rounding to the ten thousands.
1. Compare the values of each 7 in the number 771,548. Use a picture, numbers, or words to explain.

2. Compare using >, <, or =. Write your answer inside the circle.

   a. 234 thousands + 7 ten thousands  
      \[ \bigcirc \] 241,000

   b. 4 hundred thousands – 2 thousands  
      \[ \bigcirc \] 200,000

   c. 1 million  
      \[ \bigcirc \] 4 hundred thousands + 6 hundred thousands

   d. 709 thousands – 1 hundred thousand  
      \[ \bigcirc \] 708 thousands
3. Norfolk, VA, has a population of 242,628 people. Baltimore, MD, has 376,865 more people than Norfolk. Charleston, SC, has 496,804 less people than Baltimore.

   a. What is the total population of all three cities? Draw a tape diagram to model the word problem. Then, solve the problem.

   b. Round to the nearest hundred thousand to check the reasonableness of your answer for the population of Charleston, SC.

   c. Record each city’s population in numbers, in words, and in expanded form.

   d. Compare the population of Norfolk and Charleston using >, <, or =.

   e. Eddie lives in Fredericksburg, VA, which has a population of 24,286. He says that Norfolk’s population is about 10 times as large as Fredericksburg’s population. Explain Eddie’s thinking.

<td>d. Norfolk, 242,628 &gt; Charleston, 122,689</td>
</tr>
<tr>
<td></td>
<td></td>
<td>e. Eddie is correct to think that Norfolk’s population is about 10 times that of Fredericksburg’s, because Norfolk’s population is about 240,000, while Fredericksburg’s is about 24,000. 240,000 is ten times as many as 24,000.</td>
</tr>
</tbody>
</table>
1. Compare the values of each 7 in the number 771,548. Use a picture, numbers, or words to explain.

   The 7 in the hundred thousands place is ten times the value of the 7 in the ten thousands place.

   \[ 10 \times 70,000 = 700,000 \]

2. Compare using >, <, or =. Write your answer inside the circle.

   a. 234 thousands + 7 ten thousands \( \geq \) 241,000

   \[
   \begin{array}{c}
   234,000 \\
   +70,000 \\
   \hline \\
   304,000
   \end{array}
   \]

   b. 4 hundred thousands – 2 thousands \( > \) 200,000

   \[
   \begin{array}{c}
   400,000 \\
   -20,000 \\
   \hline \\
   380,000
   \end{array}
   \]

   c. 1 million \( = \) 4 hundred thousands + 6 hundred thousands

   \[
   \begin{array}{c}
   400,000 \\
   +600,000 \\
   \hline \\
   1000,000
   \end{array}
   \]

   d. 709 thousands – 1 hundred thousand \( < \) 708 thousands

   \[
   \begin{array}{c}
   709,000 \\
   -100,000 \\
   \hline \\
   609,000
   \end{array}
   \]
3. Norfolk, VA has a population of 242,628 people. Baltimore, MD has 376,865 more people than Norfolk. Charleston, SC has 496,804 less people than Baltimore.

a. What is the total population of all three cities? Draw a tape diagram to model the word problem. Then solve the problem.

\[
\begin{align*}
\text{Norfolk} & : 242,628 \\
\text{Baltimore} & : 376,865 \\
\text{Charleston} & : 496,804 \\
\hline
\text{Total} & : ?
\end{align*}
\]

\[
\begin{align*}
\text{Norfolk} & + \text{Baltimore} - \text{Charleston} \\
242,628 & + 376,865 - 496,804 \\
619,493 & - 496,804 \\
\hline
122,689 &
\end{align*}
\]

The total population of all three cities is 984,810.

b. Round to the nearest hundred thousand to check the reasonableness of your answer for the population of Charleston, SC.

Baltimore's population rounded to the nearest hundred thousand is 600,000.
Charleston's population is about 500,000 less than Baltimore's population.
600,000 - 500,000 = 100,000. The answer of 122,689 for the population of Charleston is reasonable because 122,689 rounded to the nearest hundred thousand is 100,000.

c. Record each city's population in numbers, in words, and in expanded form.

\[
\begin{align*}
\text{Baltimore} & : 619,493 \quad \text{Six hundred nineteen thousand, four hundred ninety-three} \\
\text{Norfolk} & : 242,628 \quad \text{Two hundred forty-two thousand, six hundred twenty-eight} \\
\text{Charleston} & : 122,689 \quad \text{One hundred twenty-two thousand, six hundred eighty-nine}
\end{align*}
\]

d. Compare the population of Norfolk and Charleston using $>$, $<$, or $=).

242,628 $>$ 122,689

e. Eddie lives in Fredericksburg, VA, which has a population of 24,286. He says that Norfolk's population is about 10 times as large as Fredericksburg's population. Explain Eddie's thinking.

Eddie's thinking is correct because Norfolk's population is 242,628 which can be rounded to 240,000. Fredericksburg's population can be rounded to 24,000. 240 thousands is ten times as large as 24 thousands.
